Dr. Amir Fariborz
Professor, Physics
- Ernest W. Goodell Research & Creativity Award
- State University Chancellor’s Award for Excellence in Scholarship & Creative Activities
- National Science Foundation, Principal Investigator

This catalog represents course offerings and requirements in effect at the time of publication. Current information may be obtained from the appropriate academic and administrative offices.
— President’s Message —

Welcome!

SUNYIT—the State University of New York Institute of Technology at Utica/Rome—is a unique member of the largest comprehensive public system of higher education in the nation, the State University of New York.

Founded in 1966, SUNYIT provides undergraduate and graduate degree programs in technology, professional studies, and the liberal arts. Opportunities abound for our undergraduate students—whether they arrive as freshmen or transfer here as juniors—as well as graduate students, who come from all over the region and around the world.

SUNYIT is situated on hundreds of beautiful acres in the foothills of the Adirondacks, and we are currently engaged in a $100 million dollar campus expansion. Even as construction continues on major projects, our students and faculty enjoy 21st century academic facilities in a picturesque, natural setting.

Please refer to this catalog frequently as it is both a valuable resource and a useful guide. On behalf of the faculty and staff, I extend best wishes for your success at SUNYIT.

Sincerely,

Bjong Wolf Yeigh
President and Professor

About SUNYIT

The State University of New York Institute of Technology at Utica/Rome (SUNYIT) offers undergraduate and graduate degree programs in technology and professional studies. The SUNYIT campus is a high-tech learning environment on hundreds of acres in Marcy, N.Y., with students from all over New York, many other states, and more than 20 other nations.

Established by the SUNY Board of Trustees on June 14, 1966, SUNYIT is New York’s public institute of technology. Originally a graduate and upper-division institution, the college offered classes in temporary locations and at extension sites for several years until the first buildings were constructed on the permanent campus in the 1980s. Three new buildings were scheduled for completion in 2011: the Student Center, Field House, and Oriskany Residence Hall. A technology complex comprising the Center for Advanced Technology and the Computer Chip Commercialization Center is scheduled to be completed in 2013.

At SUNYIT, students are mentored by experienced faculty in small classes, many with fewer than 20 students. Through internships, close cooperation with employers, and an annual career fair, graduates enjoy extraordinarily high placement rates. In addition to their commitment to quality teaching, faculty engage in scholarly research including collaborative efforts with the Air Force Research Laboratory in Rome, N.Y.

Apart from their excellent academic experience, SUNYIT students enjoy campus life in highly rated residence halls. Mohawk and Adirondack Residence Halls offer the privacy and convenience for apartments, with students sharing suites in townhouse-style buildings. Oriskany Residence Hall, opening in fall 2011, was designed specifically for freshmen.

Life on campus also features a full menu of recreational and cultural experiences. The Student Center, completed in 2011, includes a dining area, offices and meeting rooms for student clubs, a theater and lounges, a 20-foot media wall, and an environment enhanced for computer gaming. The Field House, also completed in 2011, is home to SUNYIT’s Wildcat intercollegiate athletics and campus intramural and recreation programs. It includes a state-of-the-art fitness center, indoor running/walking track and various sports facilities. A new, lighted turf field, baseball field and other improvements are nearing completion. The Campus Center houses a gymnasium, racquetball courts, fully-equipped exercise and weight rooms, a swimming pool, saunas, and a 400-seat dining hall. SUNYIT is a member of the National Collegiate Athletic Association (NCAA), the Eastern Collegiate Athletic Conference (ECAC), and the North Eastern Athletic Conference (NEAC). NCAA Division III athletics and intramurals are complemented by entertainment, activities and community-building experiences that support and sustain a unique campus culture.

The campus is home to a U.S. Department of Defense Reliability Information Analysis Center (RIAC), a $19 million project operated under the auspices of a team comprising: Wyle Laboratories, Inc., of Huntsville, Ala.; SUNYIT; Quanterion Solutions Incorporated of Utica, N.Y.; the University of Maryland; and The Pennsylvania State University. Also located in Kunsela Hall is a Department of Defense Data and Analysis Center (DACS COO) operated by Quanterion Solutions of Utica under a $33.9 million contract. DACS BCO is a Department of Defense Center of Excellence in software engineering; collecting, analyzing and disseminating technical information.

The SUNYIT campus is a resource for the region in a variety of ways. Business owners and entrepreneurs have obtained help, advice and services from the Small Business Development Center at SUNYIT, one of 23 campus-based regional centers and 50 outreach offices in New York State providing expert management and technical assistance to solve business problems and foster entrepreneurship. Through Digital Towpath, SUNYIT is a technology resource for municipal governments across the state. SUNYIT is headquarters for Leadership Mohawk Valley, a program that has prepared hundreds of professionals for community leadership roles. Throughout the year, the campus welcomes hundreds of senior citizens who take part in lifelong-learning courses as part of the Mohawk Valley Institute for Learning in Retirement.

SUNYIT’s more than 22,000 alumni are enjoying successful careers in many fields across the country and around the world. With a growing number of degree programs and the continuing development of the campus, SUNYIT continues to build on four decades of providing affordable, quality education and service as part of the nation’s largest comprehensive system of public higher education, the State University of New York.

Our Mission

The mission of the State University of New York Institute of Technology at Utica/Rome (SUNYIT) is to offer undergraduate studies in professional, technical, and selected liberal arts fields, as well as graduate studies in selected academic disciplines; to encourage participation in educationally oriented community and public service; and to support basic and applied research appropriate to its curricula.

SUNYIT values and encourages academic and intellectual achievement of the highest quality, broad access to persons motivated to pursue college preparation and experience, the breadth and depth provided by a sound and comprehensive liberal arts education and the technical competencies inherent to the applied disciplines. SUNYIT is committed to the integration of these elements in a coherent program of higher learning.

In addition, SUNYIT strives to provide a challenging, culturally diverse, and supportive educational environment that fosters and encourages active student participation in residential life and student organizations, athletics and recreation, and cultural and social events.

Utica and the Mohawk Valley

Located at the western end of the Mohawk Valley, Utica is the natural gateway to the beautiful Adirondack Mountains and scenic Thousand Islands. The city lies near New York State’s geographic center; it is 233 miles from New York City, 190 miles from Buffalo, 100 miles south of the St. Lawrence River, 90 miles north of Binghamton, 90 miles west of Albany (the state capital), and 50 miles east of Syracuse. Utica is a regional transportation hub; visitors can arrive by air at (Hancock International Airport in Syracuse), train or bus (Amtrak and Greyhound service to Utica’s historic Union Station), or car (the New York State Thruway or state routes 5, 8, 12).

The Utica-Rome area is steeped in history—from the American Revolution through the Industrial Revolution—and is enriched by both cultural diversity and support for the performing and decorative arts. Utica is home to the internationally recognized Munson-Williams-Proctor Arts Institute, the Utica Symphony Orchestra, Broadway Theater League, the Stanley Performing Arts Center, the Utica Zoo, and a municipal ski facility and youth recreation center. Historical, cultural and recreational destinations in Rome include the Fort Stanwix National Monument, Erie Canal Village, historic Capitol Theatre, Oriskany Battlefield State Historic Site, and Delta Lake State Park. Utica is home to the National Distance Running Hall of Fame, and hosts one of the sport’s premiere events the second Sunday of July: the Boilermaker Road Race. The race attracts the world’s elite runners in an annual field of about 10,000 participants. Additional recreation and entertainment attractions are a short drive away, including: Woods Valley, Snow Ridge and McCauley Mountain ski areas; Hinckley and Oneida Lakes, popular fishing and boating locations; and hundreds of Adirondack lakes, parks, campgrounds, hiking trails, and scenic views. With its history, natural beauty, and vibrant communities, the region enjoys numerous social, cultural, and recreational opportunities.
Admissions

Degree Programs

SUNYIT admits students into the following bachelor degree programs:
- Accounting
- Applied Computing
- Applied Mathematics
- Biology
- Business Administration
- Civil Engineering Technology
- Community and Behavioral Health
- Communication and Information Design
  Accelerated BS/MS Option
- Computer Engineering Technology
- Computer and Information Science
  Accelerated BS/MS Option
- Computer Information Systems
- Electrical and Computer Engineering
- Electrical Engineering Technology
- Health Information Management
- Interdisciplinary Studies
- Mechanical Engineering Technology
- Network & Computer Security
  Accelerated BS/MS Option
- Nursing
- Psychology
- Sociology

Available to freshmen only
Available to transfers only

Requirements for Admission

Admission is competitive. Admission decisions are weight-ed heavily on previous academic and college admission test performance; however, SUNYIT practices a holistic admissions approach. We acknowledge that a student’s success in college is dependent on many factors, and we incorporate personal essays, letters of recommendation and other supplemental information into our decision-making process.

SUNYIT will consider candidates for admission who do not otherwise meet the general admission criteria, but possess or have exhibited special talents (academic, athletic, technology, leadership, etc.). Upon request, students may have their special talent reviewed by the admissions staff, faculty and athletic coaches. Special talent candidates must present formal evidence of their special talent and may be asked to interview with the Special Talent Admissions Committee prior to receiving a final admission decision. Contact Admissions for additional information.

If admitted, the decision is provisional; students admitted with self-reported academic transcripts and test scores must present final transcripts and have test scores officially submitted for credential evaluation and diploma verification prior to matriculation. Students admitted with official transcripts must also submit final official documentation of coursework in progress and diploma verification. Failure to meet this requirement will jeopardize financial aid awards and matriculation standing.

SUNYIT reserves the right to rescind an admission decision if academic progress was not maintained by the student or is evident in final transcripts, or information is conflicting with original self-reported information.

Freshman Admission Criteria

Admission is competitive. To be considered for admission, freshman applicants should generally carry at least a B/B+ average in a college-preparatory program, and have achieved competitive SAT or ACT scores. Admission is based on high school average, SAT or ACT scores, letters of recommendation, personal essay, and other relevant supplemental information. A supplemental application is required of most students. Although not required, a personal interview is highly recommended and will be used with supplemental information as a factor in determining admission and merit scholarships.

SUNYIT participates in the EOP and Early Action Program. Students interested in EOP should refer to the EOP section of this catalog. Students who are interested in applying Early Action must submit their completed application by November 15. Applications will be reviewed and students will be notified of a decision December 15.

Transfer Admission Criteria

A transfer student is generally a student who has earned college credit following high school graduation.

Admission is competitive. To be considered for transfer admission, applicants must present a minimum 2.7 Grade Point Average (G.P.A.) for consideration. Coursework and G.P.A. from all colleges attended are considered when determining an applicant’s minimum G.P.A. for admission. Students presenting a G.P.A. below a 2.7 and above a 2.0 will be considered on an individual basis. Acceptable credentials vary by academic program. Because of academic rigor, demand for certain programs and limited availability of seats, some programs require an applicant’s G.P.A. be higher than the stated minimum.

Students must provide an official transcript from all previously attended institutions. Admission is based on previous academic record, letters of recommendation, personal essay, special talents and other relevant supplemental information. A supplemental application is required of most students. Although not required, a personal interview is highly recommended and will be used with supplemental information as a factor in determining admission and merit scholarships. Students with 30 credit hours or less may be required to submit high school transcripts and college admission test scores for review.

Application Deadline and Notification Dates

Application submission deadline is August 1 (Fall) with a completed application required by August 15; December 1 (Spring) with a completed application required by December 15. Early application is strongly encouraged for scholarship consideration and residence hall preference.

Notification of decisions for Regular Action freshman and transfer applicants will begin by January 15 and continue on a rolling admission basis until the class is full. However, SUNYIT reserves the right to close admission at any time.

The deposit and enrollment confirmation deadline is May 1; students admitted after May 1 will have 30 days from acceptance to return a deposit and enrollment confirmation.
Advanced Placement Credit
Administered by the College Board, Advanced Placement (AP) credit may be awarded for courses taken in high school dependent upon the AP exam scores achieved. Students should send an official copy of their scores directly to the Admissions Office. AP credit cannot be used to fulfill SUNYIT’s requirement for the satisfactory completion of one upper-division writing course. In addition, AP credits in biology, chemistry, environmental science or physics will only fulfill SUNYIT’s requirement for the satisfactory completion of one laboratory course in the physical sciences when a score of 4 or 5 has been achieved on any of the four AP examinations. Refer to page 31 in this catalog for a specific listing of AP examinations and acceptable scores. SUNYIT College Board Code: 0755.

Admissions Procedures
How To Apply
Prospective students should apply to SUNYIT on-line via the SUNY application or The Common Application. Applications can be accessed via the SUNYIT website. A limited supply of paper applications are available from the Admissions Office. The SUNY Campus Code for SUNYIT is 048. The program codes for SUNYIT are:

*Biological will be accepting freshmen beginning fall 2011, transfers planned for fall 2012

Declaration of Major
The campus allows freshmen to be admitted as undeclared majors. Students admitted in this manner must complete a change of program form to declare their major no later than the beginning of their junior year.

Transcripts
Official transcripts must be forwarded from all previous institutions attended to: Director of Admissions, State University of New York Institute of Technology, 100 Seymour Rd., Utica, New York 13502.

Interviews
Although an interview is not required for admission, prospective students are encouraged to visit the campus and discuss educational plans with a member of the admissions staff. For students wishing to visit the campus, telephone (315) 792-7500 or 1 (866) 2 SUNYIT or E-mail: admissions@sunyit.edu. The Admissions Office is open weekdays from 8:30 a.m. to 4:30 p.m. by appointment (phone: 315-792-7500 or 1-866-2 SUNYIT). Summer office hours are 8 a.m. to 4 p.m. Monday-Thursday, Friday 8 a.m. to Noon.

Registration
All new degree students are required to attend an orientation/registration program. Please consult the academic calendar for registration dates.

Foreign Students
Foreign students who meet the admission requirements may obtain foreign student application forms on the SUNYIT website at www.sunyit.edu or E-mail: international@sunyit.edu. Foreign students must have their transcripts evaluated through World Education Services (WES). Contact Admissions for more information.

Students with Disabilities
SUNYIT does not discriminate against qualified individuals with disabilities in admissions or in access to programs. See Services for Students with Disabilities section.

Readmission
A student seeking readmission to SUNYIT after missing three consecutive semesters must file a readmission application with the Registrar’s Office. Readmission requirements vary from program to program. Credits taken prior to readmission will be reviewed for appropriateness for the current degree by the department. The application for readmission and fee information is accessible via the SUNYIT website at: http://sunyit.edu/registrar/forms.

Non-Degree Study
Students may register for coursework at SUNYIT without being formally admitted to the college, on a non-degree basis. Seats for non-degree students are limited for some courses. Students enrolling in non-degree study must meet minimum academic criteria and have completed the necessary prerequisites for the coursework to be taken. A non-matriculated application must be filed along with submission of academic transcripts. The application for non-degree study and fee information is accessible via the SUNYIT website at: http://sunyit.edu/registrar/forms. Contact the Admissions Office for deadline dates and fee information.
Distance Learning

The college offers selected courses in distance learning through the SUNY Learning Network (SLN). SUNYIT continues to offer new courses through this medium each semester. On-line course offerings vary each semester and students should contact the Registrar’s Office for a current listing of courses. Currently undergraduate Health Information Management coursework, and programs in Accountancy (M.S.), Nursing Education (M.S.), and Technology Management (M.B.A.) are offered on-line. Select arts and science and nursing courses are also available. Online course work is available to both degree and non-degree students in undergraduate areas. Online graduate course work within the Department of Business Management is limited to matriculated students unless special permission is obtained.

Graduate Studies
Degree Programs

SUNYIT offers graduate degree programs in:

How to Apply

The prospective graduate student can obtain a graduate catalog and application from the Graduate Center at SUNYIT. Admissions procedures and requirements vary by program and are outlined in the SUNYIT graduate catalog. The graduate catalog and application are available online at sunyit.edu or a copy may be obtained by calling (315) 792-7347 or 1 (866) 2 SUNYIT or e-mailing gradcenter@sunyit.edu.

Non-Degree Graduate Study

Qualified students may enroll in graduate coursework at SUNYIT as non-degree students with the approval of the appropriate program coordinator. Non-degree graduate students requiring such approval must possess a bachelor’s degree. The number of credits allowed prior to matriculation vary by program. Non-degree students who plan to matriculate should contact the Graduate Center to begin the application process.

Part-Time Studies

Part-time students seeking matriculation into a degree program must be formally accepted by the Admissions Office at SUNYIT. Refer to section on admissions in this catalog. The Admissions Office is open weekdays from 8:30 a.m. to 4:30 p.m. by appointment (phone: 315/792-7500 or 1 (866) 2 SUNYIT). Summer office hours are 8:00 a.m. to 4:00 p.m.

Part-time degree students register in the same manner as full-time students during both advance registration and formal registration which are scheduled prior to the beginning of each term. All new degree students are required to attend an orientation/registration program. Please consult the academic calendar in the catalog for registration dates.

Students with questions about part-time degree study can visit or call the Admissions Office.

Financial Aid for Part-Time Attendance

Matriculated part-time students may qualify for the following types of financial aid:

- Pell Grant
- Supplemental Education Opportunity Grant
- Federal Nursing Loan
- Perkins Loan (formerly National Direct Student Loan)
- Federal Direct Loans
- College Work Study Program
- Aid for Part-Time Study

Refer to the financial aid information section of this catalog for details.
## Tuition, Fees and Refunds

The tuition and fees for full-time and part-time students are given below. Students carrying 12 or more credits are considered full-time. **Tuition and fees are subject to change without prior notice at the discretion of the college administration and the State University of New York.**

### Tuition

<table>
<thead>
<tr>
<th>Undergraduate</th>
<th>Full-Time</th>
<th>Part-Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>New York Resident*</td>
<td>$2,635 per semester</td>

</tr>
<tr>
<td>Comprehensive Student Fee</td>
<td>$554.50 per semester</td>
<td>$47.73 per credit hr.</td>
</tr>
</tbody>
</table>

* “Residence” for purposes of tuition refers to a student’s principal or permanent home. In order to qualify as a New York State resident for tuition purposes, in addition to other criteria, a student must be “domiciled” in New York State for a 12 month period immediately prior to the date of registration for the academic term for which application is made. A “domicile” is defined as that place where an individual maintains his/her permanent home and to which he/she always intends to return. Mere presence in New York State for educational purposes does not necessarily constitute domicile, regardless of time spent in NYS.

Effective July 1, 1986, resident tuition rates are applied to members of the Armed Forces of the United States on full-time active duty, stationed in New York State, their spouses and dependents. Spouses and dependents must obtain proof of their dependent status from appropriate personnel at their base education office and present it at the Business Office each semester upon registration. Please contact the Business Office if you require further information.

The Comprehensive Student Fee supports programs not provided by tuition dollars or state subsidy that enrich the quality of a student’s total experience at the Institute of Technology. All components of the Comprehensive Student Fee are mandatory. The typical Comprehensive Student Fee supports activities at the following levels:

<table>
<thead>
<tr>
<th>Full-time (Per Semester)</th>
<th>Part-time (Per Credit Hour)</th>
</tr>
</thead>
<tbody>
<tr>
<td>College Fee</td>
<td>12.50</td>
</tr>
<tr>
<td>Intercollegiate Athletics</td>
<td>201.50</td>
</tr>
<tr>
<td>Student Activities</td>
<td>75.00</td>
</tr>
<tr>
<td>Health Services</td>
<td>123.00</td>
</tr>
<tr>
<td>Technology Applications</td>
<td>142.50</td>
</tr>
<tr>
<td><strong>Comprehensive Student Fee</strong></td>
<td><strong>$554.50</strong></td>
</tr>
</tbody>
</table>

The College Fee is established by the Board of Trustees of the State University of New York.

The Student Activity Fee is established by the Board of Trustees of the State University of New York.

The Intercollegiate Athletics Fee is established by the Board of Trustees of the State University of New York.

The Technology Application Fee is established by the Board of Trustees of the State University of New York.

The Health Services Fee is established by the Board of Trustees of the State University of New York.

The College Fee is used to support collegiate athletics programs at the campus. It is not a fee for use of athletic facilities by the students.

The Health Services Fee is used to support the services provided by the Health Center. Students must provide a health history and physical examination to be eligible for routine medical care.

The Technology Application Fee is used to upgrade, modify and make significant technological advances in classrooms and laboratories used by SUNYIT students.

First-time transfer students are assessed a mandatory one-time Orientation Program fee of $50. Freshmen are assessed a mandatory one-time Orientation Program fee of $150, used to support activities and programs which aid the student transition to a new academic environment.

### Tuition Refund Policy

**Credit Courses**

Students withdrawing from the college incur the tuition liabilities listed below based on the date of withdrawl. Liability for tuition is calculated at the time the student completes the official withdrawl process with the Registrar’s office. Not attending classes does not reduce or cancel liability.

**Undergraduate/Graduate - 15 Week Schedule (Full Semester)**

* The first week of class session is the first day of the semester, quarter or other term. The first week of classes, for purposes of this section, shall be considered ended after seven calendar days, including the first day of scheduled classes, have elapsed.

All student fees are non-refundable after the end of the first week of classes. The college fee is non-refundable once classes start. The alumni fee is refundable by petition to the Alumni Office until the last day to withdraw without record.

Please check with the Student Accounts Office immediately about any refund/liability if you are contemplating withdrawing from any course. Consult with the Financial Aid Office also, as an aid package could be adversely affected by a decrease in credit hours.

No drop is considered official until the proper forms have been completed and submitted to the Registrar’s Office. Payment of any related fees must also be done at the Student Accounts Office, at this time. During certain specified times of the year students may Add/Drop courses via the web. When the web is closed students must make changes in person or by telephone with the Registrar’s Office. The Registrar’s Office does not accept registration changes by email.

How Receipt of Federal Title IV Funds Affects Student Refunds
(Pell, Direct Student Loans, Perkins Loans, Nursing Loans, and SEOG)

In accordance with the Higher Education Amendments of 1998, a portion of Title IV grant or loan funds, but not Federal Workstudy Funds, must be returned to the Title IV Program upon a student’s withdrawal from school. The law does not specify an institutional refund policy. This may result in a student incurring a liability to SUNYIT after the Title IV funds are returned.

Withdrawal Date
Regulation requires SUNYIT to determine a withdrawal date from the student’s official notification to the institution. For unofficial withdrawals (dropping out without notification), the withdrawal date becomes the last day we can document, you participated in an academic activity or the midpoint of the semester. If circumstances beyond the student’s control (illness, accident, grievous personal loss) caused the unofficial withdrawal, and can be documented, SUNYIT may use discretion in determining an appropriate withdrawal date.

Earned Title IV Aid
Regulation provides a formula for the calculation of the amount of Title IV aid that the student has “earned” and SUNYIT may retain. This depends on the percentage of the enrollment period that the student has completed up to withdrawal. This percentage is calculated by dividing the number of calendar days (not weeks) completed by the total number of calendar days in the period. Up through the 60% point of the enrollment period, the student is eligible for the actual percentage of aid this calculation provides. For example, if a student attends for 15 days out of a 75 day semester, he/she is eligible for 20% of their total Title IV aid package (15/75 = .20). After the 60% point of the semester, 100% of the Title IV aid is considered “earned” by the student. The earned percentage is applied to the total amount of Title IV grant and loan assistance that was disbursed (and could have been disbursed) to the student.

Application of Unearned Percentage
Any amount in excess of the allowed percentage must be returned to the appropriate Title IV program by SUNYIT, the student, or both. SUNYIT must return the lesser of the unearned Title IV assistance or an amount equal to the total liability incurred by the student multiplied by the unearned percentage. Using the above example, if a student had received $1,000 in Title IV loans and grants, and $500 had been applied to the account and $500 had been applied to the student, the earned portion of the aid package is $200 (.2 x $1000) and the unearned portion is $800 (.8 x $1000). $800 must be returned to the Title IV programs. Of this $800, $500** must be returned by SUNYIT. This may result in the student owing SUNYIT a substantial amount of money.

** $500 is the lesser of $500 vs $1590. ($1987.5 tuition x .8 unearned % applied to institutional costs = $1590)

Student Responsibility
Students should contact the financial aid office to determine how much of their federal aid they may have to repay the school before they withdraw.

Special Rule
The student would not need to repay amounts in excess of 50% of any grant monies received. If the $300 the student was to return came from a Pell disbursement, the student would only need to return $150, or not more than 50% of the grant funds received.

Order of Return of Title IV Funds
Title IV Funds must be returned in the following order:
- Unsubsidized (other than parent loans)
- Federal Direct Loans
- Subsidized Federal Direct Loans
- Federal Perkins Loans
- Federal Direct PLUS Loans
- Federal Pell Grants
- Academic Competitiveness Grant
- SMART Grant
- Federal SEOG
- Other Title IV assistance for which a return is required

Leaves of Absence
A leave of absence is not to be treated as a withdrawal and no return of Title IV funds is calculated. A student may take a leave of absence from school for not more than a total of 180 days in any 12-month period. SUNYIT’s formal leave of absence policy must be followed in requesting the leave. The leave must be approved by SUNYIT in accordance with this policy. However, if the student does not return the expiration of an approved leave, then SUNYIT calculates the amount of Title IV grant and loan assistance that is to be returned according to the HEA provision based on the day the student withdrew.

Other Refunds
Non-Credit Courses
Non-credit programs are operated on a self-sustaining basis. Fees are variable. Therefore, due to the nature of these programs, no refunds are allowed.

Room and Board Refunds
Room and board refunds are granted in accordance with stipulations in the current year Room and Board License issued to each resident. Room rental refunds are determined when all personal effects are removed from the room, keys surrendered, room inspected by Residential Life, all debts related to room rental incurred by the resident are paid in full to SUNYIT, and the resident has signed out of the room.

Room and board refund requests must be in writing. Failure to terminate occupancy in the manner stipulated in the Room and Board License may result in additional charges accumulating for the period of time between termination of residency and the date of approval by the Director of Housing.

A resident who registers and occupies a room for two weeks or less receives a percentage refund of room and board charges based upon the number of weeks housed. A week is defined as beginning on Sunday and ending the following Saturday at midnight. A part week is counted as a whole week for refund purposes. Students occupying a room after the Saturday following the second full week of classes are liable for room and board charges for the entire semester.

**Deposits**

For full-time undergraduate students (freshmen and transfers) applying for fall admission, a $50 tuition deposit along with the Tuition Deposit Card are required by May 1. For students accepted after May 1, the deposit is required within 30 days of acceptance. A refund of the tuition deposit will be granted upon written request until May 1 or for students admitted after May 1 within 30 days of the date of deposit.

Full-time undergraduate students applying for spring admission, a $50 tuition deposit is required within 30 days of acceptance. A refund of the tuition deposit will be granted within 30 days of the date of deposit.

Part-time and EOP students are not required to submit a tuition deposit, but must return the Tuition Deposit Card.

No deposits will be refunded after classes begin. Upon registration, this amount is subtracted from tuition due. Part-time students do not pay an admission deposit.

Students who wish to reserve a room in the residence halls are required to pay a $150 housing deposit, due with their Tuition Deposit Card. Requests for housing deposit refunds must be made in writing to the Residential Life and Housing Office, and are subject to terms and conditions of the room and board license. A refund of the housing deposit will be granted until May 1, or for students admitted after May 1, within 30 days of the date of deposit. Only full-time students may reserve a dormitory room.

**Medical Insurance**

In accordance with State University policy, medical insurance is mandatory for all full-time students. The charge for medical insurance purchased by the University will be added to the student's account each semester unless he/she is able to provide SUNYIT with proof of insurance coverage and fill out a Medical Insurance Waiver Form prior to attendance. It is the student’s responsibility to insure that the waiver form is on file, as the charge becomes final on the last day to waive. Waiver forms will then no longer be accepted and the student is responsible for the payment of the insurance fee. **Part-time students may purchase coverage if they so desire.** Waiver forms must be submitted on the Web each semester prior to attendance.

If you have Medical Insurance information with you when you web register:

1. Press the Medical Insurance Waiver link at the bottom of the Registration Page,
2. Complete the Medical Insurance Waiver Form,
3. Press SUBMIT/Wait for message: “Your waiver has been successfully submitted.”

The cost of Student Medical Insurance will be deducted from your bill after approval by Health Center Director.

If you have already registered but have not yet done your waiver on the web:

1. Go to SUNYIT’s Home Page on the web: [www.sunyit.edu](http://www.sunyit.edu),
2. Select Campus Intranet in the Quick Links menu,
3. Select Enter Secure Area,
4. Enter your user ID and PIN,
5. Press LOG IN,
6. **SUNYIT Information** Main Menu will appear,
7. Select Personal Information Menu,
8. Select Health Insurance Waiver,
9. Fully complete the waiver form,
10. Press SUBMIT/Wait for message: “Your waiver has been successfully submitted.”

The cost of Student Medical Insurance will be deducted from your bill after approval by Health Center Director.

Medical Insurance fee is not automatically refunded. When a student drops below full time, written request for refund will be accepted at the Business Office. After the last day to add for the semester, no further refunds of insurance will be allowed.

All international students (domestic students traveling abroad under an exchange program, or foreign students attending college in the U.S. on a student visa) **must purchase International Student Medical Insurance** regardless of whether they are full- or part-time. International students, who have been issued an I-20 from SUNYIT, must be covered the entire time they remain in the U.S., whether attending classes or remaining in the country during summer break. Exemption from participation in the plan may be granted only in very few and specific circumstances.

Since both the international and domestic insurance plans are obtained through prior arrangement with insurance agencies independent of the State University of New York, cost per year is variable based on experience rating for the program. Students will be charged the appropriate rate at the time they begin at-
Tuition, Fees and Refunds

Attendance. Those graduating in December should contact the Health Center and Business Office in advance of registration. Current rates are as follows, but are subject to change annually:

- Basic Medical Insurance $280 per year (full-time students only)
- International Student Insurance $1144.50 per year (both full- and part-time students)

*Subject to change

Parking Fees

A parking fee must be paid by all students and employees (not exempt as a result of collective bargaining agreements) who park a vehicle on campus. That vehicle must be registered with University Police and exhibit a valid parking decal. Fees are established using SUNY Parking Model Costs and Charges, and are subject to New York State and local sales taxes (currently 8.75%). All regulations pertaining to the use of vehicles on campus are enforceable 24 hours a day throughout the year.

Parking is automatically assessed to all students registered for classes requiring on-campus attendance. If you will not be parking on campus, please complete a waiver. A valid decal can be obtained at the University Police Department. Parking fees for various categories are as follows (plus applicable sales taxes):

<table>
<thead>
<tr>
<th>Time Period</th>
<th>Full-time</th>
<th>Part-time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Academic Year (fall/spring)</td>
<td>110.00</td>
<td>55.00</td>
</tr>
<tr>
<td>Single Semester Only</td>
<td>55.00</td>
<td>27.50</td>
</tr>
<tr>
<td>Summer Semester Only</td>
<td>20.00</td>
<td>20.00</td>
</tr>
</tbody>
</table>

Parking fees are non-refundable. A full-time student is a student registered for 12 or more credit hours.

Provision for additional vehicles must be made with the University Police Department. Only one vehicle may be parked on SUNYIT property at any given time. Each vehicle must be registered and display a valid registration decal.

Students who have more than enough aid to cover their appropriate semester charges may authorize the payment of their parking fee against their incoming financial aid.

Billing Tuition Payment

A bill will be generated each semester based on a student's registration. Currently enrolled, matriculated students may either register for classes online during specified times, or register by phone through the Registrar’s office. New students will register at an orientation program.

All students must confirm their attendance, and if applicable authorize their financial aid.

To keep your class schedule and housing assignment (if applicable), you must choose one:

1. **No payment due:** confirm your attendance and automatically accept your charges online at www.sunyit.edu/confirm.
2. **Pay online:** either in full or with a payment plan. This automatically accepts your charges.
3. **Pay by check:** Access your QuikPay e-Bill account, print out a copy of your current statement and return the lower portion with your check payment.

Course registrations and room and board assignments are not guaranteed if payment or valid deferral is received after due date. Students requiring a re-registration will be subject to a $40 re-registration fee. Students who will not be attending are required to withdraw from their courses through the registrar's office. Failure to attend classes is not considered a formal withdrawal and liability may be incurred as a result. De-registration for lack of payment is not considered a formal withdrawal and liability may be incurred. Students who register after the initial bill due date are required to make payment at the completion of the registration process.

Acceptable payment arrangements include enrollment in the FACTS Payment Plan, financial aid or proof of third party funding, such as VESID, WIA, Veterans Deferrals or private scholarships. Students can make payment by check or credit card online through e-Cashier. Those students who have enough financial aid credit on their bill to result in a zero or credit balance, can confirm their attendance online using their Banner account.

Students who have registered for classes and decide not to attend must formally withdraw through the Registrar’s Office to avoid being billed/charged for tuition and fees. Those students who register for classes after the billing due date are required to submit payment or valid deferral at the time of registration.

Financial Aid Deferrals

Students who have financial aid that is already verified by the Financial Aid Office will have these Financial Aid Credits appear on their statement, treated as credits. However, should a student be found to be ineligible for any listed aid, he/she is responsible for any unpaid balance. Students registered for less than 12 credit hours are not eligible for TAP awards, unless the award is made under the Veteran's Tuition Assistance Program.

If a student has a valid form of aid, not listed on the statement, it may be used as a credit if appropriate proof of award is included with their remittance. The following items are acceptable as proof:

- TAP Awards—enclose the school portion of the award certificate;
- Direct Student Loans—enclose a copy of the loan award notice;
- Pell, SEOG, Perkins Loans, or Nursing Loans—enclose a copy of the award letter from Financial Aid;
- Private Scholarships—enclose a copy of the scholarship award letter. Private scholarships must be made payable directly to SUNYIT.

If you are unsure of the status of a financial aid award, contact the Financial Aid Office at 315-792-7210. They may verify the amount of allowable deferral. It is important to note that applying for aid does not automatically guarantee eligibility.

Other Third Party Deferrals

Armed Forces Representatives

Present properly completed federal contract authorizations forms (DD1556; DD1227) at time of payment.

Employer Sponsorship

Third party payments are acceptable only if the employer, unconditionally, agrees to pay the college upon receipt of the billing statement. No stipulations regarding the student academic performance are allowable. Submit a letter of
authorization from your employer and payment of any fees/unauthorized balances to our office prior to the billing due date. Employer Sponsorship letters should include the following information:

- Reimbursement will be made directly to SUNYIT.
- Reimbursement will not be dependent upon the student receiving a grade.
- Payment is due from the employer within 30 days of billing. Billing will occur when the student reached 100% liability—5th week of classes for full term. If payment is not received within 30 days of this billing date, late fees will be added to the student account.
- A signature from a company representative.
- Be submitted on official company letterhead.
- Have a specified reimbursement amount noted.

NYS Employees and UUP Personnel

NYS Employees and UUP Personnel must submit completed, approved waivers on or before payment due date. The student is responsible for payment of all tuition and fees at time of registration-payment unless the above are furnished. Subsequent authorization will entitle the student to a refund when vouchers are honored by the issuing campus.

State or Federally Sponsored (VESID, TRA, DVR, WIA, etc.)

It is the student’s responsibility to ensure that the sponsoring agency has provided the Bursar’s Office with the appropriate vouchers or authorizations required to obtain payment. Confirmation, in writing, of the amount and limitations of the award(s) must be furnished on or before payment due date. TRA sponsored students must have a valid confirmation number available at time of payment/registration.

The student is responsible for payment of any tuition and fees not confirmed by the sponsoring agency at time payment is due. Subsequent authorization will entitle the student to a refund for covered amounts when voucher is honored.

Veteran’s Deferrals

If you are eligible for a veteran’s deferral, the appropriate forms must be filled out each semester and on file at the college, on or before the billing due date. Note that you have a Veteran’s Deferral and the amount on your semester billing statement. You will be rebilled as your tuition payments become due. Inquiries about eligibility for these deferrals should be addressed to the Registrar’s Office at 315/792-7265.

FERPA

Family Educational Rights and Privacy Act of 1974

The Family Educational Rights and Privacy Act of 1974 prohibits the release of privileged information to anyone except authorized personnel. If a student wishes another individual such as parents or spouse to have access to privileged information regarding their account, they must complete the release form obtained from the Student Account’s Office or online at www.sunyit.edu and return it to the Student Account’s Office before any information will be released. It is necessary to complete this release on an annual basis. It can however, be revoked at anytime when written notification is provided to the appropriate office by the student. A new FERPA form is required each academic year.

Required Disclosures

Please take notice, if payment is not received for obligations due to SUNYIT, this agency is required to use other collection alternatives. Pursuant to Chapter 55 of the Laws of 1992, State agencies may refer past-due accounts to a private collection agency, the New York State Attorney General’s Office, or the New York State Department of Taxation and Finance. In addition, State agencies are required to charge interest on outstanding debt at the current corporate underpayment rate set by the Commissioner of Taxation and Finance minus four percentage points, compounded daily, on accounts considered more than 30 days past due. Chapter 55 allows State agencies to charge a fee on dishonored checks or like instruments.

In addition, the New York State Attorney General’s Office and SUNY Central Administration have reached an agreement requiring the addition of any interest and collection fees. Students are liable for interest, late fees, a collection fee of up to 22%, and other penalties on past due debt. Collection fees will be added to new past due debts transferred, from this campus, to the Attorney General or private collection agencies, effective January 1995.

These terms and rates may be modified, without prior notice, as required by legislative action or Board of Trustees requirements.
Financial Aid

Applying for Financial Aid

To be eligible for financial aid you must be matriculated into a degree program, be enrolled for at least six credit hours each semester for federal aid programs and twelve credit hours each semester for the NYS Tuition Assistance Program (courses you have previously passed and are now repeating cannot be counted toward the required twelve hours), and be making satisfactory academic progress. Please note: only courses required for your degree program are considered in determining your enrollment status as it relates to financial aid eligibility. Student aid cannot be awarded for classes that do not count toward your degree.

Students must complete these items in order for the Financial Aid Office to process their financial aid.

1. Obtain a Personal Identification Number (PIN) from the U.S. Department of Education. If you do not already have a PIN, you can request one online at www.pin.ed.gov. Dependent students also have to submit a parent sign-in for a PIN to be used as signatures when the FAFSA on the Web is submitted. If you have misplaced your original PIN, you can visit the same website for a replacement.

2. Complete and submit a Free Application for Federal Student Aid (FAFSA). You can do this on the Internet at www.fafsa.gov. Important: SUNYIT receives a limited amount of funding for the campus-based programs. When that money is gone, there are no more awards from that program for that year (i.e., Perkins, Work Study, SEOG, Nursing Loans). Students are encouraged to complete the FAFSA after January 1 but before March 15. To ensure timely financial aid processing, students are also encouraged to submit the FAFSA using estimated adjusted gross income and income tax paid. However, upon completion and receipt of official federal tax return(s), the FAFSA will need to be updated to show the actual amounts reported to the IRS. Students are encouraged to view a detailed listing of the application procedure at www.sunyit.edu/financial_aid/undergraduate. If you do not have access to the Internet, you can obtain a paper FAFSA and detailed application instructions by calling 1-800-4FEDAID. SUNY Institute of Technology’s Federal Title IV School Code is 011678.

3. New York State residents must complete and submit the Tuition Assistance Program (TAP) on the Web application. Once you have submitted the FAFSA online, click on the link “Start Your State Application” on the FAFSA Web confirmation page. You may also access this application at https://www.tapweb.org/totw/. Be sure SUNYIT’s school code (undergraduate-4975) is listed on the application.

The primary responsibility for meeting educational costs rests with the student and his/her family. Estimating a reasonable family contribution is accomplished by using a needs analysis formula approved by the U.S. Department of Education to review the family’s financial situation.

SUNYIT gives priority in the awarding of financial aid to those students with the greatest net financial need. Net financial need is determined by subtracting the expected family contribution and the estimated Federal Pell Grant and Tuition Assistance Program awards from the student’s estimated cost of attendance. The family contribution, determined from the information on the FAFSA, is made up of the expected parents’ contribution (dependent students only), expected student’s earnings, expected contribution from the student’s assets, and any benefits (veterans, welfare, etc.) that the student may receive.

SUNYIT does not have a deadline for applying for financial aid, but we encourage our students to apply by April 15 each year. Applications are processed on a rolling basis starting in late February. Campus-based financial aid will be awarded until the funds are exhausted. It is important to note that these funds are limited and no guarantee can be made that they will be offered to all students.

A financial aid award letter will be sent to each student who has been accepted and has submitted all required financial aid documents.

The federal government chooses some applications to be verified. In those cases, the Financial Aid Office will request additional documents including a verification worksheet and signed copies of federal tax returns and W2 forms. These documents must be reviewed and necessary corrections made before financial aid is awarded.

If there has been a significant decrease in the student’s (if independent) or parents’ (if dependent) income from the prior year, a Special Condition form may be submitted to the Financial Aid Office along with supporting documentation. The Financial Aid Office may be able to use the current year’s estimated income rather than the prior year’s to determine eligibility for federal aid.

Students receiving financial aid can expect one-half of their award to be credited to their account each semester. Any balance due to the student after charges owed SUNYIT have been satisfied is refunded to the student as the funds arrive on campus. Federal College Work-Study students will be paid on a bi-weekly basis for the work accomplished during the previous pay period and therefore, these funds cannot be credited to the student’s semester bill.

Federal Financial Aid Programs

Campus-Based Federal Aid Programs

Federal Perkins Loan Program: A Federal Perkins Loan is a low-interest (5 percent) loan for undergraduate and graduate students with exceptional financial need, as determined by SUNYIT. The annual maximum that an undergraduate student may be awarded is $5,500, while a graduate student can receive up to $8,000 annually. The maximum aggregate loan amount is $27,500 for an undergraduate student and $60,000 for a graduate student, including loans borrowed as an undergraduate student. Repayment begins nine months after the student graduates or drops below half-time status.

Federal College Work Study Program: The Federal College Work Study Program provides jobs for undergraduate and graduate students with financial need. Students are paid by the hour and receive at least the current federal minimum wage. Jobs are located both on and off campus and students are paid every two weeks. Students generally work 7 hours
per week and set their work hours so they do not conflict with their class schedule.

**Federal Supplemental Educational Opportunity Grant Program:** A Federal Supplemental Educational Opportunity Grant (FSEOG) is an award to help undergraduates with exceptional financial need. Priority is given to Federal Pell Grant recipients. Because the funding for the FSEOG program is limited, there is no guarantee every eligible student will be able to receive a grant.

**Federal Nursing Student Loan:** Eligibility for the Federal Nursing Student Loan program is based on net financial need. Loans are available to students majoring in nursing and attending full-time. The maximum available per year is $5,200 with repayment at 5% interest beginning nine months after the student graduates or drops below half-time status.

**Non-Campus Based Federal Aid**

**Federal Pell Grant Program:** If financially eligible, undergraduate students who have not earned a bachelor's or first professional degree may qualify for a Federal Pell Grant. To be academically eligible, a student must be accepted into a degree program and be making satisfactory academic progress for financial aid eligibility. To determine if the student is financially eligible, the Department of Education uses a standard formula, passed into law by Congress, to evaluate the information reported on the FAFSA. The amount of the award will depend on the amount of money Congress has allocated to the program, the student's enrollment status, and whether or not the student attends SUNYIT for a full academic year.

**Federal Direct Subsidized Stafford/Ford Loans:** These are low-interest loans made by the U.S. Department of Education, through SUNYIT, directly to the student. Interest is paid by the government while the student is in school. The amount a student can borrow is based upon financial need (see Applying for Financial Aid) and cannot exceed $3,500 for freshmen, $4,500 for sophomores, $5,500 for juniors or seniors, and $8,500 for graduate students per academic year. Because you can't borrow more than your cost of attendance minus any expected family contribution and financial aid you're receiving, you may receive less than the maximum amounts. All Direct Loan borrowers may be charged an origination fee which goes to the government to help off-set the costs of the program. SUNYIT will use your loan to pay your charges and will give you any remaining money for living expenses. Repayment of the loan begins six months after you cease to be a half-time student and is made directly to the federal government.

**Federal Direct Unsubsidized Stafford/Ford Loans:** A borrower's unsubsidized loan amount is determined by calculating the difference between the borrower's cost of attendance for the period of enrollment and the amount of estimated financial assistance, including the amount of a subsidized loan for which the borrower qualifies. The maximum a student can apply for per academic year when combined with the Federal Direct Subsidized Loan is as follows: dependent undergraduates - $5,500 for freshmen, $6,500 for sophomores, $7,500 for juniors or seniors; independent undergraduates - $9,500 for freshmen, $10,500 for sophomores, $12,500 for juniors or seniors, and $20,500 for graduate students per academic year. Because you can't borrow more than your cost of attendance minus any financial aid you're receiving, you may receive less than the maximum amounts. Interest must be paid or capitalized by the student from the date the loan is disbursed. Unsubsidized loans will be disbursed the same as the subsidized loans.

**Federal Direct Parent Loans for Undergraduate Students (PLUS):** PLUS loans are for parents of dependent students who want to borrow to help pay for their children's education. Upon credit approval, a parent can borrow an amount not to exceed the student's estimated cost of attendance minus any estimated financial assistance the student has been or will be awarded during the period of enrollment. Repayment of the loan begins within 60 days of the last disbursement of the funds unless a borrower contacts direct lending to arrange a deferment or forbearance.

**Average Loan Indebtedness:** For May 2011 graduates who borrowed while attending SUNYIT, the average loan indebtedness was $6,806 for subsidized loan borrowers and $8,613 for unsubsidized loan borrowers. The average of all loans borrowed while enrolled at SUNYIT was $15,421 per borrower.

**Loan Consolidation:** You may want to consider consolidating your loans to simplify repayment. By consolidating your loans, you will make only one monthly payment to cover all of your loans. For more information on the Direct Consolidation Loan, call 1-800-557-7392 or visit their site on the Internet at www.loanconsolidation.ed.gov. Borrowers wishing to consolidate education loans other than a Direct Loan should contact their lenders for consolidation information.

**U.S. Bureau of Indian Affairs Aid to Native Americans:** For qualification guidelines contact Bureau of Indian Education, South & Eastern State Agency, 545 Marriott Dr., Suite 720, Nashville, TN 37214 or call 615-564-6630.

**Veterans Administration (VA) Educational Benefits:** The Veterans Readjustment Act of 1966, and subsequent legislation, enables certain veterans, or sons or daughters of deceased or disabled veterans, to obtain financial assistance for a college education. Contact the local Veterans Administration Office for further educational information or call 1-888-442-4551.

**Iraq and Afghanistan Service Grant:** Beginning with the 2010-11 award year, a student who is not eligible for a Pell Grant but whose parent or guardian was a member of the U.S. Armed Forces and died as a result of the service performed in Iraq or Afghanistan after September 11, 2001, may be eligible to receive the Iraq and Afghanistan Service Grant. Students must be under 24 years old or enrolled in college at least part-time at the time of the parent's or guardian's death. The grant award is equal to the amount of a maximum Pell Grant for the award year—not to exceed the cost of attendance for the award year.

**AmeriCorps:** This program provides full-time educational awards in return for community service work. These awards consist of working before, during, or after your postsecondary education, and you can use the funds either to pay current education expenses or repay federal student loans. For more information, contact Corporation for National and Community Service, 1201 New York Avenue, NW, Washington, DC 20255 (www.americorps.org 1-800-942-2677)

**U.S. Armed Forces:** The armed forces offer financial aid for service members and their families. For more information on recruitment incentives, contact your local military recruiter or visit the U.S. Department of Defense at www.todaysmilitary.com, click on “Benefits” and then go to “Tuition Support.”
New York State Financial Aid Programs

Unless otherwise indicated, information about these programs and other funding opportunities can be obtained from the New York State Higher Education Services Corporation, 99 Washington Ave., Albany, NY 12255. You may also call them at 1-888-NYS-HESC or visit their website at www.hesc.com.

Tuition Assistance Program (TAP): The Tuition Assistance Program (TAP) is an entitlement grant program for New York State residents attending postsecondary institutions in the state. Undergraduate students are eligible for up to four years (8 semesters) of assistance for full-time study or up to five years in certain programs. To be eligible, the student must: enroll for 12 credit hours per semester (6 credit hours during summer session) at a college or school in New York State; meet income requirements; be a New York State resident; be either a United States citizen or an eligible non-citizen; be matriculated in an approved program and be making satisfactory academic progress (satisfactory academic progress requirements are listed later in this section); be charged a tuition of $200 or more per year; and have no debt from a previously defaulted student loan or have established a satisfactory repayment plan. Awards vary according to financial status, tuition charge, type of institution attended, family NYS net taxable income, the academic year in which the student receives first payment and if other family members attend college. The award cannot exceed tuition. Students must apply each academic year by completing a Free Application for Federal Student Aid and a Tuition Assistance Program application.

Part-Time Tuition Assistance Program (TAP): To be eligible for Part-Time TAP, students must be part-time, first-time freshmen in the 2006-2007 academic year or thereafter, have earned 12 credits or more in each of the two consecutive semesters for a minimum total of 24 credits earned, and maintain a “C” average. The basic eligibility is the same as the Tuition Assistance Program with the exception of enrollment status. Part-Time TAP requires students to be enrolled for at least 6 but less than 12 credit hours per semester. Students must apply each academic year by completing a Free Application for Federal Student Aid (FAFSA) and a Tuition Assistance Program application.

Aid for Part-Time Study (APTS): The Aid for Part-Time Study program provides awards of up to $1,000 per semester (or tuition, whichever is less) for New York State residents studying part-time in an undergraduate program at participating degree-granting schools in New York State. Unlike the TAP program, Aid for Part-Time Study is not an entitlement program. The college selects recipients based on NYS net taxable income and determines individual award amounts. The basic eligibility criteria is the same as the Tuition Assistance Program with the exception of enrollment status. APTS requires a student to be enrolled for at least three, but less than twelve credit hours per semester. Students must apply each academic year by completing an Aid for Part-Time Study application obtained in the Financial Aid Office.

Math and Science Teaching Incentive Scholarship: This program provides an annual award for students, either at the bachelor or master's degree level, who enter into a contract with HESC agreeing to teach full time for five years in the field of math or science in a middle or secondary school in New York. The annual award cannot exceed SUNY tuition. Awards will be made upon the successful completion of the academic year.

Veterans Tuition Award: This program provides financial assistance to help Vietnam, Persian Gulf, or Afghanistan veterans studying on either a full-time or part-time basis at an undergraduate or graduate degree-granting institution. For full-time study (12 credit hours), a recipient shall receive an award of up to the full cost of undergraduate tuition for New York state residents at the State University of New York, or actual tuition charged, whichever is less. For part-time study (3-12 credit hours), awards will be prorated by credit hour. If a Tuition Assistance Program (TAP) award is also received, the combined academic year award cannot exceed tuition. The basic eligibility is the same as the TAP and the student must: have served in Vietnam, Persian Gulf or Afghanistan War; have served in hostilities that occurred after February 28, 1961 as evidenced by receipt of an Armed Forces Expeditionary Medal, Navy Expeditionary Medal or a Marine Corps Expeditionary Medal; have been discharged from the Armed Forces under other than dishonorable conditions; have applied for TAP if full-time student; and have applied for federal Pell grant if undergraduate student. Undergraduate students can receive a total of 4 years of payment for full-time or part-time study. Graduate students can receive a total of 3 years of payment for full-time or part-time study.

Air/Army National Guard and N.Y. Naval Militia Incentive Program: Matriculated undergraduate students who are members in good standing of the Army/Air National Guard or the N.Y. Naval Militia may be eligible for a tuition voucher equal to the tuition cost remaining after all other student aid, except loans, is applied against the undergraduate in-state tuition rate. More information can be obtained by contacting the unit commander.

Regents Awards for Children of Deceased and Disabled Veterans: These awards are for children of veterans who are deceased, disabled, or missing in action as a result of service during World War I, World War II, Korean Conflict, Vietnam, Persian Gulf, or Afghanistan or who died as a result of injuries sustained in the line of duty. The award provides $450 per year for up to four years of full-time undergraduate study at a college or school in New York State.

World Trade Center Memorial Scholarship: This program provides financial aid to children, spouses, or financial dependents of deceased/disabled persons who have died, or who have become severely and permanently disabled, and survivors who were severely and permanently disabled during the September 11th attacks or rescue and recovery operations. This includes victims at the World Trade Center site, Pentagon or on flights 11, 77, 93, or 175.

Memorial Scholarships for Families of Deceased Police Officers, Firefighters, Volunteer Firefighters, Peace Officers, and Emergency Medical Service Workers: These awards are for children and spouses of police officers, firefighters, volunteer firefighters, peace officers, and emergency medical service workers who served in New York State and who died as a result of injuries sustained in the line of duty. The amount is based on tuition and non-tuition costs of attendance per year for up to four years of full-time undergraduate study.
Aid to Native Americans: The applicant must be: (1) on an official tribal roll of a New York State tribe or the child of an enrolled member of a New York State tribe, and a resident of New York State; (2) enrolled in an approved New York State postsecondary program; and (3) maintaining satisfactory academic progress in accordance with the Commissioner’s Regulations. Application forms may be obtained from the Native American Education Unit, New York State Education Department, 89 Washington Avenue, Room 465EBA, Albany, NY 12234. Additional information can be obtained by contacting them at (518) 474-0537.

Scholarship for Academic Excellence: This academically competitive program provides scholarship assistance to outstanding New York State high school graduates based on grades in certain Regents exams. Students must (1) have graduated from a New York State high school; (2) study full-time and be matriculated in an undergraduate program in a New York State college; (3) be making satisfactory academic progress; (4) not be in default on a student loan guaranteed by HESC; (5) be a U.S. citizen or a qualifying non-citizen; and (6) be a New York State resident. Up to 2,000 scholarships of $1,500 are awarded to top scholars in the state, and up to 6,000 scholarships of $500 each are awarded to other outstanding graduates. To apply, see your high school guidance counselor.

Educational Opportunity Program (EOP): The Educational Opportunity Program provides assistance to New York State residents who are academically and financially disadvantaged, according to state guidelines. Tutoring, personal counseling, career planning, and financial assistance are available for all enrolled students. EOP offers higher education opportunities to freshmen and transfer applicants. Freshmen candidates do not meet normally applied admissions criteria, but must have the potential for post-secondary academic success. Transfer candidates must have previously been enrolled in EOP, the Higher Educational Opportunity Program (HEOP), the Search for Education, Elevation and Knowledge Program (SEEK), the College Discovery Program, or a similar academic and financial support program.

Freshman applicants interested in applying for EOP consideration must do so on the SUNY application for undergraduate admission. For transfer candidates, admissions criteria and procedures are the same as other students. Subsequently, freshmen and transfer applicants must submit supplemental materials supplied by the EOP Office to determine their eligibility. Questions regarding EOP can be directed to the EOP Office by calling (315) 792-7805.

Vocational Rehabilitation Program: Eligibility for vocational rehabilitation services is based upon: (1) the presence of a physical or mental disability which, for the individual, constitutes or results in a substantial handicap to employment; and (2) the reasonable expectation that vocational rehabilitation services may benefit the individual in terms of employability. Further information is available from the nearest NYS Office of Vocational and Educational Services for Individuals with Disabilities (VESID).

Flight 587 Memorial Scholarship: This scholarship provides financial aid to children, spouses and financial dependents of individuals killed as a direct result of the crash of Continental Airlines Flight 587 in Clarence, New York on February 12, 2009. This program will help families who lost loved ones cover the cost of attending college in New York State. The basic eligibility is the same as the Tuition Assistance Program with the exception of residency. The award amount is based on tuition and non-tuition costs of attendance per year for up to 4 years of full-time undergraduate study. The total of all aid received cannot exceed the student’s cost of attendance.

Military Service Recognition Scholarship (MSRS): This scholarship provides financial aid to children, spouses, and financial dependents of members of the armed forces of the US or state organized militia, who, at any time on or after August 2, 1990, while NYS residents, died or became severely and permanently disabled while engaged in hostilities or training for hostilities. The basic eligibility is the same as the Tuition Assistance Program. The award amount is based on tuition and non-tuition costs of attendance per year for up to 4 years of full-time undergraduate study. The total of all aid received cannot exceed the student’s cost of attendance.

International Student Financial Aid
Information on financial aid for international students can be found at the following internet sites: www.edupass.com; www.iie.org; www.isoa.org; and www.iefa.org.
Financial Aid

Scholarships
The philosophy of SUNYIT is to assist students attending the college by providing supplemental financial resources based on academic performance, community and/or college service and/or financial need.

Application Process
Generally, scholarship candidates are selected at the time the student is accepted to SUNYIT. The Admissions Office will notify students if they have been awarded a scholarship.

Freshmen: Scholarship criteria include academic achievement as well as supplemental information such as an applicant’s essay, letters of reference, and extracurricular activities. Scholarship candidates will be selected from the top ranks of admitted freshmen.

Transfer Students: Using the transfer grade point average as an indicator of academic excellence (a minimum of 3.25 is required for consideration), as well as other supplemental information students’ applications for admission are screened to determine if they meet the specific criteria for any available scholarship. There is no separate application. Students wishing to be considered should complete the college’s admissions process as early as possible since scholarships are limited.

SUNYIT Scholarships
Scholarships for students who have demonstrated strong academic ability, community service and/or financial need are our priority for charitable gifts and grants. These funds assist SUNYIT in attracting and retaining students as we face keen competition for enrollments. Gifts for scholarships are significant in promoting SUNYIT’s visibility and in aiding students of diverse ages and backgrounds who might otherwise look to another institution or who might miss out on the college experience altogether. We take pride in the growing number of endowed and annual scholarships which are made possible through the support to the Foundation and the SUNYIT Fund.

For further information concerning support of scholarships, please contact, Peter Perkins, executive director of the foundation and director of development at (315) 792-7273 or send and email to foundation@sunyit.edu.

For a brief description of available scholarships please visit our website at http://www.sunyit.edu/foundation.scholarships.

Parents/students seeking scholarship eligibility information should contact admissions at (315) 792-7208 or send and email to admissions@sunyit.edu.

General Scholarships

Academic Merit Scholarship
These scholarships are awarded to students who demonstrate academic achievement. Supplemental information such as an applicant’s essay, letters of reference, and extracurricular activities is considered. Candidates for these scholarships will be selected from the top ranks of admitted freshmen.

SUNY Empire State Diversity Honors Annual Scholarship
This scholarship is for a U.S. citizen or permanent resident and NYS resident who will make a contribution to the diversity of the student body primarily by overcoming a disadvantage or other impediment to success in higher education.

Presidential and Deans Annual Scholarship
These merit scholarships are awarded to incoming transfer students.

The President’s Opportunity Fund for Student Success
Established in 2008, this fund supports returning students who have demonstrated academic aptitude and performance and/or unmet financial need. The President’s Opportunity Fund Scholarship is a one-year, non-renewable award. The scholarships are awarded on an annual basis in the fall semester; award amounts may vary.

Various annual scholarships may be available based on funding from various individuals, organizations, or corporations.

Additional Sources of Aid:
Several source books list scholarships and fellowships awarded by private organizations. Please check your library for additional information.

You may also access scholarship information online at:
- www.fastweb.com
- www.finaid.org
- www.collegeboard.org
- www.studentaid.ed.gov
- www.scholarships.com

Scholarship announcements are also posted on the SUNYIT Student Announcements blog throughout the year.

Scholarship Renewal Requirements for Four-Year Students

- Freshmen entering SUNYIT on a merit scholarship are required to maintain a 3.0 cumulative GPA and be enrolled full-time at SUNYIT through their first two years of study (first four semesters).

- Renewal review will occur after the first year is completed, and subsequently on a semester basis. Students will be notified of their scholarship standing after their first semester.

- Starting the junior year (completion of fifth semester), students are required to achieve either a 3.25 cumulative GPA or 3.25 semester GPA as a minimum and be enrolled full-time. NOTE: Does not apply to two-year residential scholarships.

- Students who do not achieve the minimum GPA requirements stated above will have the opportunity to appeal their loss of scholarship to the Scholarship Appeals Committee through the Financial Aid Office.

Scholarship Renewal Requirements for Transfer Students

- Students must maintain a 3.25 cumulative GPA upon completion of their first year of study at SUNYIT.

- Students must be enrolled full-time (12 credit hours or more) throughout their entire period of enrollment at SUNYIT. Scholarship recipients who drop to part-time status (11 credit hours or less) or withdraw from classes completely during a semester in which they are receiving the scholarship will have their scholarship cancelled permanently. If the scholarship has already paid for that semester, the money must be returned.
• Students who do not achieve the minimum GPA requirement or who withdraw from classes for extraordinary circumstances will have the opportunity to appeal their loss of scholarship to the Scholarship Appeals Committee through the Financial Aid Office.

All scholarship recipients must maintain full-time status throughout the entire period of enrollment. Scholarship recipients who drop to part-time status (11 credit hours or less) or withdraw from classes completely during a semester in which they are receiving the scholarship will have their scholarship cancelled for that semester and for future semesters. Students who withdraw for extraordinary circumstances will have the opportunity to appeal their loss of scholarship to the Scholarship Appeals Committee through the Financial Aid Office.

Miscellaneous Programs

Employer Sponsorships: Students who will be reimbursed by their employer for tuition costs may be eligible to defer payment of their tuition. Visit the Bursar’s webpage and view “Forms” for more details.

Shirley Wurz Loan Fund: SUNYIT has established the Shirley Wurz Loan Fund to assist students in meeting unanticipated financial needs. Through this fund, a student can borrow up to $75 for 30 days with no interest or service charge. If the loan is not repaid on time, there is a $2.00 administrative charge assessed for each 30 day period or portion thereof until the loan is repaid. All funds must be repaid by the end of the semester during which they were borrowed. Loans will not be made during the last two weeks of the semester. To be eligible, a student must be enrolled at least half-time and working toward a degree. A student will not be able to borrow if he/she already has a loan outstanding, has continually repaid loans after the due date, owes an outstanding balance to SUNYIT or if classes are not in session. Applications can be obtained from the Financial Aid Office.

Class of 1983 Loan Fund: The Class of 1983 established a loan fund to assist students by providing short-term loans (up to $300) secured by undisbursed financial aid. To be eligible, a student must have authorized federal and/or state aid from which the student is entitled to a refund. A student may take out only one Class of 1983 loan a semester and loans cannot be issued against undisbursed Federal Pell Grants or future disbursements of student loans. Applications for a Class of 1983 loan can be obtained from the Financial Aid Office.

Book Credit: Students who have financial aid which exceeds their bill for that semester and have not received a refund check may be eligible for book credit which can be used to purchase textbooks and supplies at the campus bookstore. Book voucher requests can be requested through your BannerWeb account.

Financial Aid for Courses Taken at Another College

Financial aid may be processed under a Consortium Agreement for students who are taking courses at another college provided the courses are applicable to the student’s program of study at SUNYIT and are not offered by SUNYIT during the semester being taken. For more information, please contact the Financial Aid Office.

Tuition for out-of-state residents is $14,320. In-state graduate students should substitute $8,870 (out-of-state use $15,160) for the tuition costs. In-state graduate students in the MBA program should substitute $10,210 (out-of-state $16,650) for the tuition costs.

The above budgets represent average expenses. Generally, a student who is careful about his/her expenses can complete the year for less. Living expenses are based upon the assumption that the student will be sharing an apartment, and the associated expenses, with another student.

Tuition, fees, and other charges are estimated at the time of printing and are subject to change without prior notice at the discretion of the college administration and the State University of New York.

Repayment of Financial Aid

Students who drop from full- to part-time or who withdraw from SUNYIT or stop attending class without official withdrawal during a semester may be required to repay all or a portion of the financial aid awarded for that term. The amount of such repayment, if any, is dependent upon the amount of aid actually given to the student and the number of days the student actually attended classes. The calculation of any repayment will be made by the financial aid counselors subsequent to the official dropping of a class or withdrawal from SUNYIT.

Students’ Rights and Responsibilities

You have the right to ask a school:

1. The names of its accrediting and licensing organizations.
2. About its programs; its instructional, laboratory, and other physical facilities; and its faculty.
3. What the cost of attending is, and what its policy is on refunds to students who drop out.
4. What financial assistance is available, including information on all federal, state, local, private, and institutional financial aid programs.
5. What procedures and deadlines are for submitting applications for each available financial aid program.
6. What criteria it uses to select financial aid recipients.
7. How it determines your financial need. This process includes how costs for tuition and fees, room and board, travel, books and supplies, and personal and miscellaneous expenses are considered in your cost of education. It also includes the resources considered in calculating your need.
8. How much of your financial need, as determined by the institution, has been met.
9. How and when you will be paid.
10. To explain each type and amount of assistance in your financial aid package.
11. What the interest rate is on any student loan that you have, the total amount you must repay, the length of time you have to repay, when you must start repaying, and what cancellation or deferment provisions apply.
It is your responsibility to:
1. Review and consider all information about a school's program before you enroll.
2. Pay special attention to your application for student financial aid, complete it accurately, and submit it on time to the right place. Errors can delay or prevent your receiving aid.
3. Know and comply with all deadlines for applying or reapplying for aid.
4. Provide all additional documentation, verification, corrections, and/or new information requested by either the Financial Aid Office or the agency to which you submitted your application.
5. Read, understand, and keep copies of all forms you are asked to sign.
6. Repay any student loans you have. When you sign a promissory note, you are agreeing to repay your loan.
7. Notify your school of a change in your name, address, or attendance status. If you have a loan, you must also notify your lender of these changes.
8. Satisfactorily perform the work agreed upon in a Federal College Work Study job.
9. Understand your college's refund policy.
10. Maintain good academic standing to retain your eligibility for financial aid.

Academic Requirements for Financial Aid Eligibility for Undergraduate Students

Federal and state regulations require that institutions of higher education establish minimum standards of “satisfactory academic progress” for students to be eligible for financial aid. These standards are applied to a student’s entire academic history at SUNYIT, including periods when financial aid was not received. Failure to meet the academic requirements for financial aid eligibility does not affect the student’s academic standing at SUNYIT.

The federal and state regulations governing the financial aid programs require students to meet certain academic requirements in order to receive financial aid. To be academically eligible for financial aid, you must be matriculated (accepted into a degree program); be enrolled for at least 6 credit hours each semester for federal aid programs (you may qualify for Pell at less than half-time status); 12 credit hours each semester for federal aid programs (you may qualify for Pell at less than half-time status); 6 credit hours for part-time TAP; 3-11 credit hours for the NYS Aid for Part-Time Study (APTS) program; and be making satisfactory academic progress.

Requirements for Federal Student Aid Programs

A. Satisfactory academic progress is determined by measuring the student's academic performance at SUNYIT and consists of three components. In order to remain academically eligible for the federal aid programs, the student must meet the following requirements:
1. Maximum Time Frame: students must meet all degree requirements within 150% of the credit hours needed to earn the degree; and
2. Qualitative Measure: at the close of each spring semester students must have a cumulative grade point average of 2.0 or greater. Students must also maintain a cumulative grade point average greater than that which would result in academic dismissal (this information is listed in this catalog in the Undergraduate Standing section of the Academic Requirements and Policies chapter); and
3. Quantitative Measure: students must pass at least 66% of all credit hours attempted toward their degree (the 66% measurement will be reviewed at the close of each spring semester).

All requirements and procedures which follow apply to full-time and part-time students.

B. Review Policies:
1. At the close of each spring semester, the cumulative GPA and number of credits earned by each student are reviewed for compliance with the criteria for good academic standing. Students not receiving financial aid are subject to the same criteria and can be placed on financial aid suspension for future consideration.

2. The following are considered credits passed:
   a. “A” through “D” grades;
   b. “S” passing with credit;
   c. courses repeated for credit, subject to the above grades.

3. The following are not considered credits passed:
   a. “F” grades;
   b. “W” withdrawal;
   c. any courses audited with no credit;
   d. “I” incomplete;
   e. “IP” in progress.

C. Notification: Whenever possible the Financial Aid Office notifies by letter any student who does not maintain satisfactory academic progress that he/she is being placed on financial aid suspension.

D. Financial Aid Suspension: A student who fails to meet any of the above requirements is placed on financial aid suspension for federal aid until the requirement has been met. Also, any student who withdraws from SUNYIT, does not pass any courses (Incompletes are not considered passing grades) or is academically dismissed may lose his/her eligibility for aid, be placed on a Financial Aid probationary status, and/or would be required to see Financial Aid for counseling. Financial aid suspension results in the termination of financial aid from all federal financial aid programs including loans. Students do not have to receive a warning before action is taken to deny financial aid.

E. Appeal of Financial Aid Suspension: An otherwise serious and successful student may request a waiver of the satisfactory academic progress requirements through the following procedure:
1. The student submits a Request for a Waiver form (can be obtained from the Financial Aid office) to the Director of Financial Aid or his/her designee. The request should include:
   a. reasons why he/she did not achieve the minimum academic requirements,
   b. reasons why his/her aid should not be terminated, and
   c. documentation which would support his/her reason for failing to maintain satisfactory academic progress (i.e., statement from doctor if reason given was medically related).
2. The Director of Financial Aid or his/her designee reviews the appeal and determines whether the granting of a waiver is warranted. The student is then advised of the decision.
3. Students whose appeals are approved will be placed on Financial Aid probation. Students who fail to meet the terms of their probationary period will be denied aid until they regain their eligibility.

F. Conditions of Reinstatement:
1. A student's eligibility for federal financial aid will be reinstated for subsequent semester once the above “Requirements for Federal Student Aid Programs” have been met.
2. Students who are academically dismissed and who wish to return to SUNYIT must submit an appeal to the Registrar’s Office. Those who are readmitted will need to apply for a Financial Aid Waiver if they do not otherwise meet the academic progress requirements. The Undergraduate Standing section of the Academic Requirements and Policies chapter in this catalog contains information on academic reinstatement.
3. A grade change may result in the reinstatement of a student's eligibility. However, it is the responsibility of the student to notify the Financial Aid Office of any grade changes.

Requirements for New York State Financial Aid Programs

In addition to the previously stated academic requirements, a student who has been determined eligible for an award from a New York State aid program must meet the New York State academic requirements. Visit www.hesc.com for further information.

If you do not meet the above academic requirements, you will not be eligible for the Tuition Assistance Program (TAP), Aid for Part-Time Study (APTS), or other New York State aid programs.

If you received credit for a TAP, APTS, or other New York State aid award on your bill, and subsequent verification of your academic eligibility reveals that you did not meet the requirements, we are required to cancel your award and you will be required to pay any balance owed SUNYIT.

A student can regain eligibility only by being granted a one-time waiver if extraordinary circumstances prevented the student from meeting the criteria or by making up deficiencies without receiving TAP, APTS, or other New York State aid program awards (this provision does not re-establish eligibility for a student who fails to meet the 2.0 cumulative grade point average requirement).

Additional information on satisfactory academic progress requirements can be obtained by contacting the Financial Aid Office.

The information contained in the financial aid section of the catalog is correct at the time of printing. Changes in policies, requirements, and regulations may occur at any time.

Child Care Subsidy Program

SUNYIT has a child care subsidy program for student parents. The goal of this program is to provide support to low-income student parents and allow them the opportunity to obtain a SUNYIT degree. This program provides child care subsidies for income-eligible student parents that demonstrate the ability to successfully complete the course of study and maintain satisfactory progress.

Funds are allocated on a first come, first serve basis. Apply for child care subsidy by contacting the Office of Student Accounts at (315) 792-7412.
Academic Requirements and Policies

Degrees

The Board of Regents and the New York State Education Department have authorized the State University of New York Institute of Technology to confer the following undergraduate degrees: Bachelor of Professional Studies, Bachelor of Science, Bachelor of Arts, and Bachelor of Business Administration.

SUNYIT offers Master of Science degree programs in accountancy, adult nurse practitioner, advanced technology, applied sociology, computer and information science, family nurse practitioner, gerontological nurse practitioner, health services administration, information design and technology, nursing administration, nursing education and telecommunications. SUNYIT also offers Master of Business Administration degree programs in health services management and technology management. Advanced certificates are offered in adult nurse practitioner, family nurse practitioner, gerontological nurse practitioner and nursing education.

Accreditation

The State University of New York Institute of Technology is accredited by the Board of Regents of the State of New York. Its academic programs are registered by the State Education Department.

SUNY Institute of Technology is accredited by the Middle States Association of Colleges and Schools. Its educational programs in nursing and health information management are accredited by the Commission on Collegiate Nursing Education (CCNE), and the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM).

The following programs are accredited by the Technology Accreditation Commission of the Accreditation Board for Engineering and Technology (TAC/ABET): civil engineering technology, electrical engineering technology, industrial engineering technology, mechanical engineering technology, and computer engineering technology.

The Association to Advance Collegiate Schools of Business (AACS B) accredits the State University of New York Institute of Technology School of Business undergraduate degree programs in accounting, business, finance, and health services management and graduate programs: MBA in health services management, MBA in technology management, M.S. in accountancy and M.S. in health services administration.

Undergraduate Grading System

The level of a student’s scholarship is determined by the following system of quality points per semester hour of credit:

<table>
<thead>
<tr>
<th>Grades</th>
<th>Quality Points Per Credit Hour</th>
</tr>
</thead>
<tbody>
<tr>
<td>A +</td>
<td>4.00</td>
</tr>
<tr>
<td>A Excellent</td>
<td>4.00</td>
</tr>
<tr>
<td>A</td>
<td>3.67</td>
</tr>
<tr>
<td>B +</td>
<td>3.33</td>
</tr>
<tr>
<td>B Good</td>
<td>3.00</td>
</tr>
<tr>
<td>B</td>
<td>2.67</td>
</tr>
<tr>
<td>C +</td>
<td>2.33</td>
</tr>
<tr>
<td>C Satisfactory</td>
<td>2.00</td>
</tr>
<tr>
<td>C</td>
<td>1.67</td>
</tr>
<tr>
<td>D +</td>
<td>1.33</td>
</tr>
<tr>
<td>D Poor</td>
<td>1.00</td>
</tr>
<tr>
<td>F Failure (no earned credit)</td>
<td>0.00</td>
</tr>
<tr>
<td>W</td>
<td>Withdraw</td>
</tr>
<tr>
<td>I</td>
<td>Incomplete</td>
</tr>
<tr>
<td>IP</td>
<td>In Progress Passing</td>
</tr>
<tr>
<td>S4</td>
<td>Average or Above</td>
</tr>
<tr>
<td>U5</td>
<td>Unacceptable</td>
</tr>
<tr>
<td>EX</td>
<td>Examination (Refer to Test-out Policy Below)</td>
</tr>
</tbody>
</table>

The grade point average (GPA) is determined by dividing the total number of quality points by the total number of semester hours for which a student has been graded (“A” through “F”). If a student has retaken a course, only the course with the higher grade is used in computing the cumulative GPA.

1. Withdrawn from a course subsequent to the add/drop period and prior to the last class meeting at the end of the tenth week of classes.

2. The Incomplete Grade (I): A grade assigned at the discretion of the instructor when the student has failed to complete the course due to circumstances beyond the student’s control. The incomplete must be removed by mid-semester of the following semester. An incomplete that is not removed within this period is recorded as an “F.” NOTE: Students cannot re-register for a course in which they are currently registered and have an incomplete grade pending.

3. In Progress Passing (IP): is assigned at the discretion of the instructor when the student is making satisfactory progress in course requirements that one ordinarily would be unable to complete by the end of a semester; e.g., research, practicums, internships. Students have until the end of the following term to complete the required work. [NOTE: An IP grade that is not changed by the end of the following term is recorded as an “F.”]

4-5. “S” and “U” grades apply only to those courses that have been approved as S/U grade courses. Grades “A” through “F” may not be awarded in such courses. The “S” grade signifies that the requirements of the course have been successfully completed and academic credit has been earned. The “U” grade indicates that the requirements of the course have not been successfully completed and no academic credit has been earned. S/U graded courses are indicated as such in the course descriptions. “S” and “U” grades are not included in calculating the student’s GPA, and, if an “I” were to be given and not removed, the “I” reverts to a “U.”
Final Grade Reports

Students should carefully review their final grade reports that are available on the campus web at the conclusion of each semester. Errors should be immediately reported to the Registrar's Office. Students have one year from the end of any semester in which to request, in writing, a correction to their academic record, and must provide appropriate documentation to support the request.

Certifying Official

The Registrar is designated as SUNYIT's certifying official and performs the following certification functions: Veterans Educational Benefit Certification, verification of enrollment (i.e., insurance, employment, enrollment certification for NYS Higher Education, loan servicing centers and banks, etc.), and certification/verification of graduation.

Undergraduate Honors

Eligibility for the academic honor lists is based upon full-time (12 or more credit hours) matriculated student status in courses that are graded “A” through “F.” One or more incomplete (I) grades renders a student ineligible for academic honors.

1. President’s List. A semester GPA of 3.60 or more qualifies a student for that semester’s President’s List.
2. Dean’s List. A semester GPA of 3.20 or more, and less than 3.60 qualifies a student for that semester’s Dean’s List.

Graduation Honors

SUNYIT confers honors in recognition of excellence. This concept, by its nature, involves an overall academic performance which is unusual; noteworthy; extraordinary. Consequently, the students thus designated are normally expected to be few.

Accordingly, honors will be conferred according to the following pattern:

In each department of SUNYIT, generally not more than 15% of the graduating students shall be awarded graduation honors.

Exceptions to Academic Policies

Students seeking an exception to an academic policy may do so by filing a petition form with the chair of their academic department.

Test-Out Policy

As a matter of policy, SUNYIT allows students to establish credit for coursework on the basis of activities other than normal class attendance. Each academic department establishes its own policy for testing out, observing the following guidelines:

a. The basis for establishing credit must be explicitly formulated and approved in advance by the divisional faculty, the chairperson, and the Provost. A copy must be on file in the Registrar’s Office.

b. Credit established under this policy must be used to satisfy degree requirements and must not extend the total number of credit hours required for graduation.

c. No more than 12 credit hours can be established under this policy.

d. A grade of EX will be assigned for each course to students establishing credit under this policy. EX grades are not counted when calculating the student’s GPA.

e. Regular tuition will be charged for each course requirement satisfied under this policy.

f. Credits earned through this procedure may not be applied toward the 30 semester hour residence requirement.

g. A student may have the opportunity to test-out of a particular course only once.

Policy for “F” Grades After Re-matriculation

A student re-matriculating at SUNYIT after an absence of seven years may petition the Academic Affairs Committee to have a maximum of twelve credits of “F” course grades that were received at the Institute prior to re-matriculation, be removed from the calculation of their cumulative grade point average (GPA). All “F” grades in courses taken at SUNYIT will still continue to be listed on the student’s transcript.

In order to petition for the removal of course “F” grades, the student must have completed twelve credits of course work after the re-matriculation and the cumulative GPA for these twelve credits must be 2.5 or higher.

Courses that are currently offered at SUNYIT at the time of petitioning that may not be included are:

- General education courses or course substitutes (as determined by the appropriate School).

- Courses or course substitutes (as determined by the appropriate department) that are required by both the previous as well as the new or current degree program.

The Academic Affairs Committee’s decision on the student’s petition will be based primarily, but not solely, upon whether the student was able to demonstrate via the petition that an unrealistically heavy burden would be placed upon them by requiring them to retake the courses listed in the petition.
Policy for “F” Grades for Courses No Longer Available at SUNYIT

If a student has an “F” grade in a course and the course is no longer available at SUNYIT, the student may petition the department previously offering the course to:

1. Have the appropriate faculty within the department determine if there is presently a comparable course available for the student to take at SUNYIT.
   a. If such a course is available, the student may take the new course as a substitution and have the new grade computed in his/her GPA.
   b. The old course grade will remain on the student’s transcript and the “F” grades will be removed from the GPA calculation.

2. If there is no comparable course available for the student to take at SUNYIT.
   a. The student may petition the Academic Affairs Committee to have the “F” grade removed from their GPA calculation.
   b. The old course grade will remain on the student’s transcript.

Upper Division Credit Requirement

Students must accrue a minimum of 30 upper division credits (courses numbered 300 or above at SUNYIT) of which at least 12 credits in residence must be in the major.

Undergraduate Standing

The following definitions and regulations apply to undergraduate standing:

1. Matriculated Student: Any student who has followed the standard SUNY admission policies for entrance to SUNYIT and is formally enrolled in an established program leading to a degree at SUNYIT. A student who discontinues enrollment for more than one year will lose status as a matriculated student and must apply for readmission.

2. Full-Time Matriculated Student: Any matriculated student who has enrolled in a minimum of twelve (12) credit hours of coursework during a semester.

3. Part-Time Matriculated Student: Any matriculated student who has enrolled in less than twelve (12) credit hours of coursework during a semester.

4. Academic Overload: Any student registering for more than 16 semester credit hours (18 credits for majors in the Department of Engineering Technologies) in any semester must have the written approval of the appropriate school dean, or his designated representative.

5. Class Standing: A matriculated student’s class standing is determined as follows:
   - Freshman – 0 to 29 earned credit hours of coursework.
   - Sophomore – 30 to 59 earned credit hours of coursework.
   - Junior – 60 to 89 earned credit hours of coursework.
   - Senior – 90 or more earned credit hours of coursework.

6. Academic Good Standing: A student is considered in good standing unless expelled, suspended, or academically dismissed from SUNYIT and not re-admitted.

7. Academic Warning: At the completion of each semester, each student’s academic record is routinely reviewed, and if the cumulative grade point average is below 2.00, the student is placed on academic warning for the following semester.

8. Academic Dismissal: At the completion of each semester, the academic record of each student on academic warning will be reviewed for academic dismissal reasons. If the semester grade point average of a student on academic warning is below a 2.00, the student will be academically dismissed. No student will be academically dismissed without first being on academic warning.

9. Readmission Following Academic Dismissal: Students dismissed for academic deficiencies who wish to apply for readmission to SUNYIT must submit their written application to the Academic Dismissal Readmissions Committee. The committee will evaluate the application and make a determination as to readmission. The committee may delay readmission until one full semester has elapsed and will generally do so if a student is applying for readmission a second time. A student granted readmission to SUNYIT will be placed on academic dismissal/reinstatement. Establishing matriculation in a degree program is governed by the regulations for matriculation in that program at the time of readmission.

10. Voluntary Withdrawal: To retain good academic standing, students who withdraw voluntarily must officially withdraw through the Registrar’s Office. Students who do not officially withdraw may receive failing grades in any courses not completed. The student who withdraws voluntarily without being granted a leave of absence loses matriculation status. Should the student desire to return at a later time, the student must file a Petition for Readmission form with the Registrar’s Office and be approved for readmission. (Admission/graduation requirements in effect at the time of re-entry will apply.)

11. Leave of Absence: Leave of absence for a specified period of time may be granted to a student who is not subject to academic dismissal. The student applying for leave of absence must give a definite date for re-registration at this college of no longer than one academic year from the date of leaving SUNYIT. A student not returning for re-registration within the specified time will be classified as officially withdrawn from SUNYIT. Application for leave of absence must be made to the chair of the academic department in which the student is enrolled.

12. Continuous Matriculation: Degree requirements existing at the time of initial matriculation remain in force only if the student maintains continuous matriculation. A student who discontinues enrollment for more than one year without being granted an official leave of absence must apply for readmission. Degree requirements are determined by the catalog under which the student is matriculated. Readmission requirements may vary from program to program. In either case, course prerequisites listed in the catalog are subject to change.
**Code of Academic Conduct**  
Refer to the current Student Handbook for SUNYIT’s Code of Academic Conduct.

**Undergraduate Course Requirements**

1. **Class Attendance.** Each student is expected to attend class regularly in order to achieve the maximum benefit from educational activities. The student is responsible for all classwork missed, regardless of the reasons for absence. Each instructor sets the standards of performance to be met by each student for each course in keeping with the standards and policies of SUNY and the college, or department. Expected performance is defined at the beginning of the course. The student’s performance in relation to the established standards shall determine the student’s grade in a course.

2. **Time Requirement for Courses.** It is the policy of SUNYIT for all courses offered to conform to the New York State Education Regulations requiring at least 15 hours of instruction* and at least 30 hours of supplementary assignments for each semester credit hour awarded in lecture/discussion courses. For example, a four credit course requires at least four hours of instruction plus supplementary assignments requiring at least eight additional hours each week for the 15-week semester. Courses involving laboratories, independent studies, tutorials, or practicum experiences are required to have some combination of instruction, laboratory work, and/or supplementary assignments equaling at least 45 hours for each credit awarded.

3. **Repeating Courses.** A student may repeat any course in which he or she has received a grade of “F.” Since no credit is earned for a course in which a grade of “F” has been received, the student must make up the credit deficiency. If a failed course is specifically required for the student’s academic program, the student must repeat the course. A student may repeat any course in which he or she has received a “D” or better with the approval of the advisor, instructor, and chairperson of the department offering the course. While the student receives credit for only one course attempt toward completion of the degree or program, both grades remain on his or her record; only the higher grade is used in computing the student’s cumulative GPA.

4. **Waiver of Courses.** The academic department chairperson may allow substitutions for a particular credit course required in a program or curriculum. The student’s advisor must formally recommend the substitution as part of the petition for waiver.

5. **Independent Study.** Independent study projects are designed to provide matriculated students with the opportunity for a learning experience in a specific area of knowledge not provided by regular courses at SUNYIT. They are not to be used in lieu of courses listed in the general catalog, nor are they to be considered guaranteed offerings; they are available to the student as facilities, faculty, time, and interest permit. Within these guidelines each academic department defines its concept of independent study.

- Responsibility for planning, conducting, and reporting on an independent study project rests with the student. However, students are to seek the assistance of a faculty member in developing proposals. The student must submit a proposal to the faculty member specifying educational goals, proposed methods of evaluation, duration of the project, and the number of credit hours. The completed proposal is reviewed by the chairperson of the subject area. **Registration for independent study can only occur after the proposal has been approved by that chairperson.** Independent study courses cannot be added after the normal add date for the semester. A copy of the proposal must be filed with the registrar when registering for the course. At the end of the study period, the faculty member will receive documentation of the results, assign an appropriate grade, and forward the grade with an abstract to the registrar. No more than eight (8) credit hours toward the undergraduate degree may be taken as independent study at SUNYIT.

6. **Auditing Courses.** Students must complete a Course Audit Registration Form for a course to be taken for audit. The form must be signed by the instructor of the course and the chairperson of the academic department within which the course is offered. Students taking courses for audit may submit Course Audit form beginning the first day of classes but no later than the last day to add classes. Tuition and fees are not charged for audited courses and there will be no notation of these courses on the SUNYIT transcript. NOTE: online and hybrid courses cannot be audited.

7. **Adding or Dropping a Course.** A student may add or drop a course, without academic record, by completing the appropriate forms available in the Registrar’s Office and obtaining the required approvals (refer to the comprehensive academic calendar for appropriate dates). During the third through ninth week of the semester, any student dropping a course receives a ”W” grade. After the ninth week of class, a letter grade A-F is assigned.

8. **Section Changes.** Change of section is accomplished by the use of an add/drop form.

9. **Students Unable to Register or Attend Classes on Certain Days Because of Religious Beliefs.** The SUNY policy on attendance in class states: No person shall be expelled from or be refused admission as a student to an institution of higher education for the reason that the student is unable, because of religious beliefs, to register or attend classes or to participate in any examination, study, or work requirements on a particular day or days.

   Any student in an institution of higher education who is unable, because of religious beliefs, to attend classes on a particular day or days shall, because of such absence on the particular day or days, be excused from any examination or any study or work requirements.

   It shall be the responsibility of the faculty and of the administrative officials of each institution of higher education to make available to each student who is absent from school, because of religious beliefs, an equivalent opportunity to make up any examination, study, or work requirements which the student may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the institution for making available to said student such equivalent opportunity.

---

* Inclusive of examinations. An hour of instruction equates to 50 minutes of actual class time.
Academic Requirements and Policies

If registration, classes, examinations, study, or work requirements or opportunity to register are held on Friday after four o’clock post meridian, or on Saturday, similar, or make-up classes, examinations, study, or work requirements shall be made available on other days, where it is possible and practicable to do so. No special fees shall be charged to the student for these classes, examinations, study, or work requirements held on other days.

In effectuating the provisions of this section, it shall be the duty of the faculty and of the administrative officials of each institution of higher education to exercise the fullest measure of good faith. No adverse or prejudicial effects shall result to students because of their availing themselves of the provisions of this section.

Any student who is aggrieved by the alleged failure of any faculty or administrative officials to comply in good faith with the provisions of this section, shall be entitled to maintain an action or proceeding in the supreme court of the county in which such institution of higher education is located for the enforcement of the student’s rights under this section.

Physical Education/Recreation

All SUNYIT bachelor’s degree programs will allow a maximum of four credit hours (transfer and institutional) for courses in the areas of Physical Education and/or Recreation. These credit hours may only be applied as Open Electives towards completion of degree requirements. Individual academic programs may include additional restrictions.

Residency Requirements

SUNYIT maintains a minimum residency requirement of 30 semester hours, of which a minimum of 12 semester hours must be in the major. Consult your program description for any additional specific residency requirements.

Transcript Request Policy

SUNYIT transcript requests must be made in writing with the student’s signature. Telephone requests cannot be legally honored. There is a $5.00 processing charge for each copy of a transcript requested. All financial obligations to SUNYIT must be cleared prior to the issuance of a transcript.

Transfer of Credit

It is the policy of SUNYIT to accept only those transfer credits that are applicable to the student’s degree requirements, i.e., a 64 semester hour transfer of credit into a baccalaureate program requiring 124 hours indicates that the student will need to complete an additional 60 hours to finish the bachelor’s degree. A minimum 2.0 cumulative grade point average must be maintained for all credit transferred. Courses for which transfer credit is allowed may not be repeated for credit at SUNYIT. Total transfer of credits may not exceed 64 semester hours (141 quarter hours). SUNYIT accepts transfer credit only. Transfer course grades and quality points earned at the transfer institution are not reflected in a student’s grade point average.

A. Transfer of Credits Taken Prior to Matriculation

Students may transfer all applicable earned credit not to exceed 64 semester hours. Additional credit beyond 64 semester hours may be accepted from primarily four-year institutions if it is applicable to the student’s degree program. Under no circumstances may the student transfer more than 76 credits of lower division coursework.

B. Transfer of Credits Taken After Matriculation

Matriculated students who wish to take coursework at another college and receive additional transfer credit must receive prior approval by filing an academic petition in accord with the procedures of their academic department. Approval of transfer credit will be based on the applicability of the course towards the student’s degree requirements, and successful completion of the course with a grade of “C” or better. Ordinarily, these courses shall be taken from four-year colleges, but under no circumstances may the student transfer more than 76 credits of lower division coursework. It is the student’s responsibility to have an official transcript forwarded to the Registrar’s Office for evaluation upon completion of the course.

C. Credit by External Examination

Credit is allowed for other types of educational experience when applicable to the student’s degree requirements according to the following guidelines:

1. College Proficiency Examination Program (CPEP). Administered by the New York State Education Department, CPEP offers examinations in the arts and sciences, nursing, health, and teacher education.

2. College Level Examination Program (CLEP). The College Entrance Examination Board offers a national credit-by-examination program that includes general examinations in the humanities, social sciences, mathematics, natural sciences, English, composition, introductory accounting, and computer and data processing.

3. United States Armed Forces Institute (USAFA/DANTES). The USAFI offers credit-by-examination in a variety of academic areas including the humanities, social sciences, and business administration.

4. Regents External Degree (RED). The Board of Regents of the University of the State of New York offers various programs in which students can demonstrate successful subject area competencies by examination.
D. Advanced Placement Credit

Administered by the College Entrance Examination Board, Advanced Placement (AP) credit may be awarded for courses taken in high school dependent upon the scores achieved. Certain academic programs may not accept AP credit for specific requirements. Students should check with the program faculty to determine how AP credit will be applied in that program. Students should send an official copy of their scores directly to the Admissions Office. AP credit cannot be used to fulfill SUNYIT’s requirement for the satisfactory completion of one upper-division writing course. In addition, AP credits in biology, chemistry, environmental science or physics will only fulfill the SUNYIT’s requirement for the satisfactory completion of one laboratory course in the physical sciences when a score of 4 or 5 has been achieved on any of the four AP examinations.

Below is a listing of AP examinations and acceptable scores:

Explanations:
1. NA - SUNYIT does not have an equivalent course.

The AP credit is given, but it does not preclude student from taking any SUNYIT course.

2. (*) If credit is received for PHY 101 and/or PHY 102 then PHY 201 and/or PHY 202 cannot be taken for additional credit. (see PHY 201 and PHY 202 in the catalog).

E. Effect of Transfer Credits

Credits awarded under the above regulations have no effect upon the computation of the student’s grade point average.

Requirements for Graduation

1. Students with 124/128 credits accumulated and/or in progress must submit an application to graduate form to the Registrar’s Office by the preceding November 1 for May graduation, by April 1 for August graduation, or by June 1 for December graduation. The list of potential graduates is forwarded to each academic school and advisors and the registrar review each student file to determine if all requirements have been met. Students completing coursework off-campus should contact the Registrar’s Office for specific deadline dates. All students have approximately three weeks from the formal date of graduation to submit any paperwork required to clear them for graduation (specific deadline dates are posted each semester by the Registrar’s Office). Students not meeting this deadline will be notified in writing that they have not graduated.

2. While each student is assigned a faculty advisor and is given an opportunity to obtain additional counseling on personal and collegiate matters, final responsibility rests with the student to assure that all degree program requirements are satisfied for graduation.

3. Satisfactory completion of 124 credits (128 in specified programs) with a minimum cumulative GPA of 2.00 for all coursework taken at SUNYIT is required for graduation. Additionally, students must meet all specific program requirements and must maintain a 2.00 GPA in all courses in the major, as identified by their department, for graduation.

4. There is a $10.00 diploma cover fee which must be paid prior to graduation. All financial obligations must be cleared before the diploma is released.

Graduation with Incomplete Grades

A student who has met all graduation requirements but who has an outstanding Incomplete grade can elect to graduate with the outstanding Incomplete grade. Students who elect to graduate in this manner may not change the Incomplete grade at a later time to another letter grade. Graduation honors will be set at the time of graduation and will not change. Students may also elect to delay their graduation to the next semester so that the Incomplete grade can be changed and the new grade may be calculated in the cumulative grade point average.

Dual Baccalaureate Degrees

1. A student possessing a baccalaureate degree from another institution may earn a second baccalaureate degree* from SUNYIT by completing the specific degree requirements and the residency requirement. A student may satisfy both requirements simultaneously.

2. A student may earn two baccalaureate degrees* from SUNYIT. The student must satisfy all degree requirements for each program. A student wishing to complete more than one baccalaureate degree may transfer a different set of courses for each degree but in no case is a student allowed to transfer more than 94 credit hours for each degree. A student must complete at least an additional 30 resident credit hours beyond the requirements for the first degree for each additional degree earned.
Academic Minors

Matriculated students at SUNYIT can obtain an academic minor in an area of study that is different from the area of the major and that has been approved by the Curriculum Committee and the Provost. Approved minors are described in the catalog. Application for an academic minor must be made through the department offering the minor. Specific courses must be identified in consultation with a faculty member in the minor. A statement of successful completion of the minor will appear on the student’s transcript at the time of graduation.

The following additional criteria must be satisfied for approval of the minor:
1. The minor must consist of a minimum of 17 credit hours.
2. The minor must be in a different discipline from the student’s major. “Different discipline” signifies a discipline other than the discipline comprising the majority of the courses in the student’s academic major.
3. At least eight credit hours must consist of advanced level courses. “Advanced level” signifies courses beyond the entry-level sequence in the discipline; these courses normally carry prerequisites.
4. At least eight credit hours must be taken at SUNYIT.
5. At least eight credit hours must not be required courses in the major.
6. A student must maintain a minimum cumulative grade point average of 2.0 (average of “C”) in the minor.

Second Major

By petition approved by both major departments and the Registrar’s Office, a matriculated student may complete the requirements for a second major at SUNYIT. The student continues as a matriculated student within the primary academic field; upon graduation the student must provide the dean or chairperson of the second major with documentation that the requirements of the second major curriculum have been fulfilled. The second major is then listed on the student’s official transcript. Only majors are so recorded, not options.

Regional Educational Consortium

SUNYIT is a member of a regional educational consortium that includes Empire State College (Utica location only), Herkimer County Community College, Hamilton College, Mohawk Valley Community College, SUNY College of Technology at Morrisville, and Utica College. Full-time matriculated students at any of the consortium partners are able to enroll in one course of up to four credits of eligible coursework per semester (fall and spring only) at partner campuses without incurring additional tuition charges.

Eligible courses must be applicable to the student’s degree program and approved by the student’s academic advisor, then certified by the Registrar. Courses are ineligible if SUNYIT offers the same or equivalent course during the same semester. Registration in eligible courses is provided by the host campus on a space-available basis, determined by the host campus or about the first day of classes.

When enrolled in a course at another campus, students are reminded that the course will follow the calendar and all academic and student conduct regulations of the host campus. While there is no additional tuition charge for courses taken under this program, students will be charged by the host campus for any fees (e.g., parking, technology, computer, student activity, etc.) normally assessed upon part-time students. In addition, SUNYIT may impose an administrative fee.

Full details on this program, which may be modified from time to time, are available in the Office of the Registrar.

Undergraduate Students Registering for Graduate Courses

Matriculated Undergraduate Students in accelerated BS/MS programs see program requirements.

For Graduate Credit

Undergraduate students looking to register for graduate course to earn graduate credit must complete a Petition for Graduate Courses. This is for students who are enrolled in their final semester needing less than full-time credits hours to graduate. A minimum cumulative GPA of 3.2 in the degree and a 3.0 for all coursework at SUNYIT is required. Granting graduate credit is contingent upon successful completion of all concurrent undergraduate degree requirements. A maximum of 6 credits is allowed.

For Undergraduate Credit

Undergraduate students looking to register for a graduate course to earn undergraduate credit must complete a Petition for Graduate Courses. This is for students who have completed the equivalent of one full-time semester at SUNYIT. A minimum GPA of 3.2 for all coursework at SUNYIT is required. A maximum of 6 credits is allowed. Note: the course or courses will appear on the student’s undergraduate transcript and may not be used for graduate credit at a later date.
**Lab Science Requirement**

Each undergraduate student must successfully complete a laboratory science course of 3 or more credits in order to complete their program of study at the Institute. This laboratory science course must be taken in addition to the natural sciences course required by the SUNY General Education policy.

**Foreign Language Requirement**

Credit for the SUNYIT General Education Foreign Language Requirement may be issued to students who have done one of the following:

1. Satisfactorily completed a one-semester FL course at SUNYIT;
2. Satisfactorily completed and transferred a college-level FL course from another institution (upon receipt of official transcript);
3. Earned a score of 3 or higher on FL AP exam (upon receipt of official transcript);
4. Earned a satisfactory score on an approved FL test via the normal Test-Out Policy.

The SUNYIT General Education Foreign Language Requirement may be waived for students who have done one of the following:

1. Earned a score of 85 or higher on a NYS FL Regents exam (upon receipt of official high school transcript);
2. Received a diploma or degree from a secondary or higher educational institution in which the language of instruction was other than English;
3. Documented successful completion of four years of schooling in an educational institution where the language of instruction was other than English;
4. Earned a passing grade on the NYU Foreign Language Proficiency test;
5. Earned a score of 530+ on SAT II in a foreign language;
6. Received a minimum of a “B” grade or 85 in fourth year of a foreign language;
7. Earned a satisfactory score on a Native American Language proficiency exam (pending identification of appropriate testing instruments and scores).

An official copy of a transcript (and approved translation if in a language other than English) demonstrating eligibility for this waiver must be submitted to the chairperson along with a completed petition requesting the waiver. Students will not receive any academic credit for this waiver and there will be no reduction in the student’s SUNY General Education credit requirements for graduation.

**Writing Requirement**

Based upon the recommendation of the President’s Blue Ribbon Panel on Basic Skills (1984), SUNYIT adopted the following writing requirement:

Each student must successfully complete ENG 101, “English Composition” and at least ONE upper division writing course (e.g., COM 240, COM 306, COM 307, COM 308, COM 311, COM 350, COM 353, COM 400) to ensure a professional level of writing competency.

SUNYIT also established the Writing Faculty Committee to oversee the implementation of this requirement and to create an appropriate test-out procedure for those students interested in challenging the required writing courses for credit. Each semester the current registration booklet identifies the courses that meet the writing requirement and provides the procedure for challenging a course through the test-out.

**Enhanced General Education Core**

SUNYIT offers freshmen the opportunity to complete a significant portion of the general education requirements via a core sequence of coursework that integrates four general education requirements into three courses. The three courses are IDS 201, “Perspectives on Knowledge,” IDS 102, “Art and Culture,” and IDS 103, “Science, Technology, and Human Values.” Students who complete all three core courses will have satisfied four general education areas: Western Civilization, Other World Civilizations, Humanities, and Fine Arts. The three core courses do not need to be taken in sequence, and students who complete only one or two of the core courses should meet with a general education advisor to determine the general education credit they have earned.
**General Education**

SUNYIT is dedicated to the idea that a baccalaureate degree should not only prepare students to enter the work force, but also to take part fully in today’s society. SUNYIT strongly believes that its graduates should be aware of life’s complex nature in the 21st century. They should have sufficient understanding of the present major issues and problems, so they may make informed choices in politics, in professional pursuits, and in personal endeavors.

To help achieve this, SUNYIT encourages its students to create three major areas of thinking within themselves. The first is an appreciation of the scientific method and the scope of scientific achievement. The second is a familiarity with the diverse traditions, institutions, and cultural expressions of our modern world. The third is an understanding of each person as an emotional, rational, and creative being.

Since our age is marked by rapid change and specialization, SUNYIT recognizes the compelling need of its students to think so they can easily see the connections that do exist among the apparently diverse actions of the people and world around us.

Each program of study at SUNYIT has adapted its curriculum to help students achieve this type of comprehensive education.

### SUNY General Education Categories

The following list of SUNY Institute of Technology arts & sciences courses fulfill general education requirements as noted below.

#### Mathematics
- MAT 111 College Mathematics
- MAT 112 Elements of Calculus
- MAT 115 Finite Mathematics for Computer Science
- MAT 120 Precalculus
- MAT 121 Calculus for Engineering Technology I
- MAT 122 Calculus for Engineering Technology II
- MAT 151 Calculus I
- MAT 152 Calculus II
- MAT 225 Applied Statistical Analysis
- MAT 413 Discrete Mathematics for Computer Science
- STA 100 Statistical Methods

#### Natural Sciences
- AST 222 Astronomy
- BIO 101 Introduction to Biology
- BIO 103 Biology I
- BIO 105 Introduction to Ecology
- BIO 110 Anatomy & Physiology I
- BIO 111 Anatomy & Physiology II
- BIO 122 Insects & Society
- BIO 130 Plant Biology
- BIO 150 Introduction to Genetics
- BIO 215 Anatomy & Physiology I
- BIO 216 Anatomy & Physiology II
- BIO 222 Nutrition and Health
- BIO 224 Biology of Aging
- BIO 225 Biology of the Sexes
- BIO 310 Evolution
- CHE 110 Essentials of Chemistry
- ENV 115 Introduction to Physical Geology
- ENV 210 Weather and Climate
- PHY 101 General Physics I
- PHY 102 General Physics II
- PHY 201 Calculus Based Physics I

#### Social Sciences
- ANT 301 General Anthropology
- ANT 302 Biological Anthropology: Contemporary Issues
- ANT 303 Cultural Diversity
- ANT 310 Introduction to Cultural Anthropology
- COM 262 Online Politics
- ECO 110 Microeconomics
- ECO 330 Economics of Aging
- IDS 203 Introduction to Science, Technology and Society
- POS 110 American Public Policy

#### American History

*For all Students*
- HIS 101 American History: Colonies to Reconstruction
- HIS 102 American History: Reconstruction to the Present
- HIS 330 American Women’s History
- IDS 304 Technology in American History
- For Students Scoring Above 84 on NYS Regents in American History:
  - HIS 308 Latinos in American History

#### Western Civilization

- HIS 150 History of Modern Europe
- HIS 306 History of Science and Technology
- HIS 317 Topics in Black History
- HIS 360 Environmental History
- HIS 370 Western Civilization and the World
- HIS 375 Gender Issues in World History
- HUM 220 Introduction to Social Political Thought
- IDS 400 Prominent Themes in Western Civilization
- Since the Renaissance
- IDS 401 Contemporary World Views

#### Other World Civilizations

- ENG 211 Art & Cultural Revolution
- HIS 306 History of Science and Technology
- HIS 340 Latin American Civilizations
- HIS 370 Western Civilization and the World
- HIS 375 Gender Issues in World History
- PHI 130 World Religions

#### Humanities**

**ART 350 History of American Art
- COM 315 Theater and Communication
- COM 316 Media and Communication
- ENG 110 Introduction to Literature
- ENG 211 Art & Cultural Revolution
- ENG 310 Topics in American Literature

#### Basic Communication

- ENG 101 Freshman Composition
- ENG 105 Critical Reading & Writing

---

* *See description of the Enhanced General Education Core.*

** Courses listed under the Humanities requirement can ONLY be used to fulfill the Humanities requirement and cannot be double counted.

*IDS 201 Perspectives on Knowledge
*IDS 102 Nature and Culture
*IDS 103 Science, Technology, and Human Values

---

**The Arts**

- ART 120 Studio Art: Visual and/or Performing
- ART 135 Drawing
- ART 140 Painting/Technique and Style
- ART 210 Principles of Two Dimensional Design
- ART 341 Painting II/Technique and Style
- ART 350 History of American Art
- COM 212 Digital Photography and Imaging
- COM 315 Theater and Communication
- ENG 205 Creative Writing
- MUS 300 Music Appreciation
- MUS 301 SUNY Jazz
- MUS 362 Choral Performance
- THR 120 Studio Art: Visual and/or Performing
- THR 300 Theater Production

**Foreign Language**

- CHI 101 Elementary Chinese
- FRE 101 Elementary French
- SPA 101 Elementary Spanish
- SPA 102 Intermediate Spanish

**Basic Communication**

- ENG 101 Freshman Composition
- ENG 105 Critical Reading & Writing
Bachelor of Science in Accounting

The Department of Business Management is accredited by AACSB International and committed to continuous quality improvement for all our programs.

The B.S. degree program with a major in accounting is for students interested in becoming certified public accountants or specializing in the accounting industry. Certified public accountants are licensed professionals, and serve in a variety of roles and organizations. Most CPAs are employed by accounting firms, or are self-employed, providing auditing and tax services to a wide variety of clients. Many CPAs are employed by government, particularly in state and federal tax departments. Private corporations also employ CPAs for various accounting functions.

The degree program is designed to prepare students for the CPA examination, and is registered by the State Education Department as a CPA preparation program. Degree requirements are rigorous, allowing less flexibility in the transfer and selection of courses than in some of the other degree programs at SUNYIT.

Although this degree program is designed to articulate with lower division programs, many students find that they need coursework beyond the normal four semesters to fulfill the degree requirements. This would likely apply for transfer to any registered accounting program. Careful advance planning based upon the following degree requirements can minimize the total time needed to complete CPA educational requirements.

In addition to the CPA preparation program, the B.S. or B.B.A. degree programs with a major in business administration allow a student to “specialize” in accounting by utilizing accounting courses as elective choices within their degree program. Students transferring from A.A.S. programs or A.O.S. programs can qualify for a degree with a major in business sooner than if they enter the accounting major program. Students interested in corporate accounting, accounting in not-for profit agencies, government accounting, etc., probably should choose this degree track. These students can also qualify for the Certified Management Accountant (CMA) national examination. Students should consult the business administration section of this catalog for degree requirements. With careful course selection within the business degree program and appropriate post-graduation course selection, these students can eventually also qualify for admittance to the CPA examination, if they so choose.

For additional regulations and special features, consult the Business Administration section of this catalog.

Degree Requirements Overview

The degree outline presented is a four-year plan, where approximately half of the listed requirements can be met at the lower division by transfer. Although some courses are listed by their SUNYIT numbers, they are often fulfilled with transfer credits. The general requirements of the program are as follows:

- Total of 125 semester hours with a maximum 64 semester hour transferred from two-year institutions
- Minimum of 62 semester hours (50% of degree requirements) in the arts and sciences
- Minimum of 24 semester hours of accounting with at least 12 semester hours of accounting to be completed at SUNYIT

- Auditing - ACC 450,
  Advanced Accounting Problems - ACC 475,
  Taxes - ACC 310 or ACC 311,
  Intermediate Accounting 2 - ACC 386 (must be completed at the upper division)
- Minimum of C (2.00) in all accounting courses in the degree program, both transfer and at SUNYIT and a minimum of C (2.00) in all business core courses at SUNYIT, requirements and electives
- Minimum of 60 semester hours in business and accounting courses, and general education requirements as outlined for SUNYIT

B.S. Degree Requirements†

I. Arts and Science (62 Credits)

- Microeconomics
- Macroeconomics
- Basic Communication
- Statistics
- Mathematics
- Computer Science
- Lab Science
- Natural Science
- Art
- Foreign Language
- American History
- Western Civilization
- Other World Civilization
- Humanities
- Behavioral Science
- Business Communications
- Arts/Science Electives (remainder of credits)

II. Business (39 Credits)

- Financial Principles
- Finance II
- Business Law I
- Business Law II
- Marketing Principles
- Organizational Behavior
- Management Science
- Issues in Business & Society
- Management Policy
- Introduction to Management Information Systems
- Business Electives (remainder of credits)

III. Accounting (24 Credits)

- Financial Accounting
- Intermediate Accounting I
- Intermediate Accounting II*
- Tax*
- Auditing*
- Cost Accounting
- Advanced Accounting*
- Accounting Elective (remainder of credits)
- Unrestricted Electives (remainder of credits)

125 total credits

*Course must be taken at the upper division level.
† The Office of Professions at New York State Education Department may change the New York State CPA Education requirement. The course requirements for the B.S. degree program with a major in accounting reflect the changes from NYSED. For current regulations and up-to-date CPA education requirements, consult the Department of Business Management.
Bachelor of Science in
Applied Mathematics

Applied mathematics is a field that develops and employs a variety of mathematical methods and techniques in order to describe and predict the behavior of systems encountered in science and industry. For example, mathematical and numerical modeling allows engineers to simulate the behavior of many complex systems without having to construct expensive physical models. A degree in applied mathematics appeals to individuals who are interested in applying their mathematical and problem solving skills to real world problems.

There is a need nationally for individuals with rigorous training in applied mathematics, both in industrial and academic settings. Our graduates acquire the necessary mathematical skills to help meet this demand. We are one of three SUNY campuses offering a degree in Applied Mathematics.

People with training in applied mathematics obtain employment in fields as diverse as finance, aerospace, oil exploration and extraction, manufacturing, quality assurance, geology, the actuarial sciences, communications, and computing. They pursue careers in business, industry, government, and academia. Specific job categories include statistician, programmer analyst, cryptographer, reliability analyst, computer modeler, biological systems analyst, and financial analyst.

Depending upon future goals, students may structure their coursework with an emphasis on preparation for graduate school or for more immediate employment. Those who wish to further their study of mathematics may obtain a strong background in the more rigorous and abstract aspects of mathematics. Partial Differential Equations, Real Analysis, Vector and Tensor Calculus, Linear Algebra, and Discrete Mathematics are courses available for students with this interest. For those wishing to pursue careers immediately upon graduation, a rich back ground in those courses especially suitable to industry may be obtained. Courses supporting this area of study include Mathematical Modeling, Electromagnetism, Numerical Differential Equations, Numerical Linear Algebra, Numerical Computing, Statistics, and Probability.

Students may also work individually with faculty members to pursue special interests outside of our scheduled courses. Students have worked with faculty in areas including fractals and chaos, computational holography, detection and estimation in radar systems, and graph theory.

Students are also encouraged to receive academic credit through our Applied Math internship. This provides interested students the opportunity to work with local companies, putting their mathematics skills to work in applied settings.

Degree Requirements Overview
- Satisfactory completion of at least 124 semester hours of college-level work.
- Satisfactory completion of at least 60 semester hours of upper-division college work, at least 30 of which must be taken at SUNYIT.
- Achievement of at least a “C” cumulative grade point average in all coursework taken at SUNYIT.
- Satisfactory completion of the Core Mathematics Courses with an average grade of “C” or higher.

B.S. Degree Requirements

I. General Education (30-56 credits)
   - Natural Science (Physics I) 3-4
   - Laboratory Science (Physics II) 3-4
   - Computer Language 3-4
   - Computer Science Course 3-4
   - Mathematics (Calculus I) 3-4
   - Upper Division Writing 3-4
   - Basic Communication 3-4
   - Humanities 3-4
   - The Arts 2-4
   - Foreign Language 3-4
   - Social Sciences 3-4
   - American History 3-4
   - Western Civilization 3-4
   - Other World Civilizations 3-4

II. Physics and Computer Science (12-16 credits)
   - Physics I & II 6
   - Computer Science (including one language course) 6

III. Core Mathematics (30-40 credits)
   - MAT 151 Calculus I (Differential Calculus) 4
   - MAT 152 Calculus II (Integral Calculus) 4
   - MAT 253 Calculus III (Multivariate Calculus) 4
   - MAT 260 Ordinary Differential Equations and Series Solutions 4
   - MAT 340 Linear Algebra 4
   - MAT 370 Applied Probability 4
   - MAT 381 Modern Algebra 4
   - MAT 420 Complex Variables and Their Applications 4
   - MAT 425 Real Analysis 4

IV. Restricted Electives (3 courses from the following)
   - MAT 335 Mathematical Modeling 4
   - MAT 345 Introduction to Graph Theory 4
   - MAT 380 Abstract Mathematics: An Introduction 4
   - PHY 401 Electromagnetism 4
   - MAT 413 Discrete Mathematics for Computer 4
   - CSC 420 Numerical Computing 4
   - PHY 420 Intermediate Mechanics 4
   - MAT 423 Vector and Tensor Calculus 4
   - MAT 430 Number Theory & Its Applications 4
   - MAT 450 Partial Differential Equations 4
   - MAT 460 Numerical Differential Equations 4
   - MAT 490 Special Topics 4
   - MAT 491 Independent Study 4
   - MAT 492 Applied Math Internship 4

V. Unrestricted Electives (Balance of 124 credits)

124 Total Credits
Bachelor of Science in Biology

Biology is a multidisciplinary cutting-edge field encompassing the vast diversity of life from the smallest amino acid to ecosystem dynamics. The biology program at SUNYIT provides an in-depth introduction to the breadth of the discipline through core courses while maintaining the flexibility to explore one of three specialization tracks with a diverse selection of upper-level classes. This program prepares students for a variety of careers in research, conservation, human medicine, veterinary medicine, teaching, as well as employment in government or private firms.

Faculty

Our faculty are dedicated to quality education through scholarship and research. The breadth of our faculty interests and experiences enable students to specialize in sub disciplines of biology such as ecology and evolutionary biology, entomology, botany, physiology, and cell biology.

Laboratories and Facilities

Many of our biology courses include a 3 hour lab session or fieldwork per week. There are two well-equipped biology laboratories found in Donovan Hall. The biology laboratories are equipped with standard equipment consisting of compound and dissecting microscopes, sterilizer, incubators, and various instruments shared with chemistry such as spectrophotometers with fluorometers, various chromatographs, etc... Students also have access to electrophoresis equipment, a PCR instrument and a tissue culture hood. And, for science students who prefer a larger lab experience, the SUNYIT campus includes hundreds of acres of forest and wildflower areas. In addition, SUNYIT is close to diverse ecosystems such as the Utica Marsh, Rome sand flats, and the Adirondack Mountains.

The Program

The program content consists of three study tracks or options in the area of biology: Life Sciences, Bioinformatics, and Biotechnology.

Life Science Track

This track is for those students who have an interest in biology on an organismal or physiological level and wish to study the roles and interdependence that organisms have within an ecological system.

Students will be prepared for careers that may involve but are not limited to the assessment of environmental impact as a result of human enterprise, the control of animal and biological pests in a safe ecological manner, the impact of genetically altered plants and animals on the environment, the biological effects of global warming, etc.

Bioinformatics Track

This track is for those students who have an interest in statistics and computer science and would like to apply those interests to the biological sciences. This new field deals with the extraction of information from biological research data, such as information about the function of complex biological molecules or the role that genes play in the production of human characteristics and illnesses.

In addition, bioinformatics will provide information on the design of new drugs that utilize genetic and molecular characteristics to enhance their efficacy. Normally, the Bachelor’s degree forms the foundation for further graduate study in this new and exciting field.

Biotechnology Track (anticipated 2015)

This track is for those who are mainly interested in biology on a molecular or chemical level and encompasses such areas as biochemistry and molecular biology as well as the analytical aspects of biological research. This track will help prepare students for a career that may involve work in molecular or cellular research, pharmaceutical development or genetic engineering.

Degree Requirements

To earn a Bachelor of Science (BS) degree in biology a student must fulfill the following: The structure of the degree program will require all students enrolled to take thirteen core courses (45 credits). Generally, nine of these courses will be completed by the end of the sophomore year. Also, students will be required to complete all of the general education courses (33–40 credits) as outlined by the N. Y. S. Board of Regents, many of which may also be completed by the end of their second year in the program.

Before the start of the junior year, students will be expected to chose, in conjunction with a faculty advisor, one of the three tracks outlined above. Each of these tracks requires an additional 29 to 33 credits of course work beyond the core courses. All of these “track” courses will need to be completed during the junior and senior years with an additional 1 credit of Junior Seminar and Senior Seminar taken in the last 2 years.

Additional elective courses in biology or in other academic areas will complete the 124 credit hour degree requirement for the B. S. degree in biology.
B.S. Degree Requirements

To earn a Bachelor of Science (B.S.) degree in biology, a student must complete a minimum of 124 credit hours and fulfill the following requirements:

I. General Education (36-48 credits)

- American History 3-4
- Foreign Language 3-4
- Humanities 3-4
- Mathematics 3-4
- Other World Civilizations 3-4
- Natural Sciences
  - Lab Science 3-4
  - Other Science 3-4
- Social Science 3-4
- The Arts 3-4
- Western Civilization 3-4
- Basic Communication 3-4
- Upper Division Writing 3-4

II. Core Courses Required* (45 credits)

- BIO 103 Introductory Biology I 4
- BIO 104 Introductory Biology II 4
- BIO 270 Cell Biology 4
- BIO 351 Genetics 4
- BIO 390 Junior Seminar 1
- CHE 130 Introductory Chemistry I 4
- CHE 131 Introductory Chemistry II 4
- CHE 230 Organic Chemistry I 4
- CHE 231 Organic Chemistry II 4
- CHE 430 Biochemistry I 4
- PHY 101 Physics I 4
- MAT 151 Calculus I 4

- Any three of the following elective courses:
  - BIO 210 General Microbiology 4
  - BIO 230 Plant Anatomy 4
  - BIO 235 Introduction to Mycology 4
  - BIO 311 Advanced Physiology 4
  - BIO 320 Entomology 4
  - BIO 322 Integrated Pest Management 4
  - BIO 331 Comparative Plant Morphology 4
  - BIO 340 Vertebrate Zoology 4
  - BIO 341 Invertebrate Zoology 4
  - BIO 342 Animal Behavior 4
  - BIO 401 Phylogenetics 4
  - BIO 430 Plant Systematics 4

III. All majors will be required to complete one of the following tracks (29–33 credits)

A. Life Sciences (29 credits)

- BIO 300 Ecology 4
- BIO 380 Evolution 4
- BIO 315 Plant & Animal Physiology 4
- BIO 487 Sr Life Science Seminar 1
- MAT 225 Applied Statistical Analysis 4

- Any three of the following elective courses:
  - BIO 210 General Microbiology 4
  - BIO 230 Plant Anatomy 4
  - BIO 235 Introduction to Mycology 4
  - BIO 311 Advanced Physiology 4
  - BIO 320 Entomology 4
  - BIO 322 Integrated Pest Management 4
  - BIO 331 Comparative Plant Morphology 4
  - BIO 340 Vertebrate Zoology 4
  - BIO 341 Invertebrate Zoology 4
  - BIO 342 Animal Behavior 4
  - BIO 401 Phylogenetics 4
  - BIO 430 Plant Systematics 4

B. Bioinformatics (33 credits)

- BIO 470 Molecular Biology 4
- BIO 475 Bioinformatics 4
- BIO 488 Sr Bioinformatics Seminar 1

- MAT 225 Applied Statistical Analysis 4
- MAT 370 Applied Probability 4
- CS 108 Computing Fundamentals 4
- CS 240 Data Structures and Algorithms 4
- CS 249 Object Oriented Programming 4

*Core courses may fulfill general education requirements; consult SUNYIT course catalog for specific general education category.

C. Biotechnology (anticipated 2015) (29 credits)

- BIO 460 Biotechnology 4
- BIO 470 Molecular Biology 4
- BIO 489 Sr Biotechnology Seminar 1
- CHE 330 Instrumental Analysis 4
- CHE 431 Biochemistry II 4
- PHY 220 Electronics for Scientists 4
- MAT 152 Calculus II 4
- MAT 225 Applied Statistical Analysis 4

IV. Unrestricted Electives (Balance of 124 credits)

124 Total Credits

All students must achieve a minimum of a “C” grade in all major courses (core and track) and a minimum 2.00 overall grade point average in order to graduate.
Bachelor of Science in
Business Administration

The Department of Business Management is accredited by AACSB International and committed to continuous quality improvement for all our programs. The Bachelor degree programs in business are supported by a broad general education program. Concentrations are offered in Accounting, Business, Finance, Human Resource Management, and Marketing/Advertising. Students are prepared to become leaders in the business world and hold key management positions in business and industry. Each student is counseled and evaluated in the admissions process as to the most appropriate degree program based upon career objectives, plans for future education, and previously earned college credits if applicable.

Business Concentrations

The Department of Business Management offers “concentrations” of coursework for those students who desire to specialize in particular fields of study. Upon completion of a series of courses at SUNYIT, a student may apply to the Department Chair and be awarded a Department Concentration Award, recognizing this accomplishment. Concentrations are available only to those students with sufficient elective hours in their program of study analysis. Students without such elective opportunity may, at their option, complete the necessary concentration work beyond their minimum degree requirements.

Students who have sufficient electives available may decide to satisfy the requirements of two concentrations. Concentrations are presently awarded in accounting, business, finance, human resources management, and marketing/advertising.

These concentration awards may be of value to students who wish to provide prospective employers with evidence of extended work in an area related to a specific employment opportunity.

A student must complete the course sequences at the Institute of Technology. They may substitute by petition other Institute of Technology courses designated by a faculty concentration advisor. Students should not repeat topics completed at the lower division. All courses must be completed with grades of “C+” or better before the award is approved. All of these sequences require preliminary work in these fields either at a two-year school or at the Institute of Technology.

Accounting
Financial Accounting plus:
ACC 310 Income Tax I
ACC 370 Cost Accounting
ACC 385 Intermediate Accounting I
ACC 386 Intermediate Accounting II

Business
Principles of Business plus:
Any four non-core (required) business courses to be determined in consultation with an academic adviser.

Finance
Financial Principles plus:
FIN 332 Investments
FIN 341 Financial Institutions
FIN 411 Financial Management Problems
FIN 420 Financial Planning and Control

Human Resources Management
Human Resources Management plus:
MGT 320 Appraisal, Compensation and Motivation
MGT 415 Industrial and Labor Relations
MGT 425 Human Resource Selection and Staffing
BUS 420 Employee Benefits

Marketing and Advertising
Marketing Principles plus:
MKT 312 Marketing Management Problems
MKT 321 Advertising Management
MKT 465 Consumer Behavior
MKT 470 Marketing Research

Degree Requirements Overview

All degree programs offered through the Department of Business Management require the completion of a minimum of 124 semester hours, which include 30 semester hours of upper division college work. All degree programs offered through the Department of Business have the following requirements:

- Minimum of 124 semester hours with a maximum of 64 semesters transferred from two-year institutions
- At least 24 hours of business coursework must be completed at SUNYIT
- Minimum of 30 credits completed at SUNYIT
- Distribution and general education requirements as outlined in the degree requirements
- Minimum of C (2.00) in all business core courses taken at SUNYIT; requirements and electives
- All business transfer courses must have a grade of “C” or better to apply to the degree program

See separate sections for accounting, finance.
B.S. Degree Requirements

The program is designed primarily for the student who has either an Associate in Arts (A.A.) degree, an Associate in Science (A.S.) degree or entering freshmen who meet the college’s admissions criteria. It requires the same core of business courses as the B.B.A. program. In general, a student in the B.S. program has a broader education in content, whereas the B.B.A. student specializes. One is better than the other only in the context of the student’s individual personal and career objectives.

The B.S. degree will be granted to those students who satisfactorily complete at least 124 semester hours of college-level work (including lower division study) distributed as follows:

I. Arts and Science (64 credits)
   - Elements of Calculus
   - Statistics
   - Lab Science
   - Natural Science
   - Microeconomics
   - Macroeconomics
   - Basic Communication
   - Business Communications
   - Behavioral Science
   - American History
   - Western Civilization
   - Other Civilizations
   - Humanities*
   - Arts
   - Foreign Language
   - Arts/Science Electives (remainder of credits)

II. Business (48 credits)
   - Financial Accounting
   - Managerial Accounting
   - Introduction to Business
   - Business Law
   - Finance Principles
   - Marketing Principles
   - Organization Behavior
   - Human Resource Management
   - Issues in Business & Society
   - Management Science
   - Management Policy
   - Business Electives (remainder of credits)
   - Unrestricted Electives (remainder of credits)

124 total credits

B.B.A Degree Requirements

This degree is similar to the traditional business degree offered by colleges and universities nationwide. It is specifically geared to those students who may have focused on business courses at their two-year colleges and want to continue in that direction. This program provides a background in business and management which bridges the gap between specialization and generalization. It gives both freshmen and transfer students the opportunity for concentrated study in one of the basic areas of business as well as a broad-based background to grow with during an extended career.

I. Arts and Science (60 credits)
   - Elements of Calculus
   - Statistics
   - Lab Science
   - Natural Science
   - Microeconomics
   - Macroeconomics
   - Basic Communication
   - Business Communications
   - Computer Applications
   - Behavioral Science
   - American History*
   - Western Civilization*
   - Other Civilizations*
   - Humanities**
   - Arts*
   - Foreign Language*
   - Arts/Science Electives (remainder of credits)

* Complete a minimum of three of the 6 courses
** Written communication and technical writing courses do not fulfill this requirement.

II. Business (60 credits)
   - Financial Accounting
   - Managerial Accounting
   - Introduction to Business
   - Business Law
   - Finance Principles
   - Marketing Principles
   - Organization Behavior
   - Human Resource Management
   - Issues in Business & Society
   - Management Science
   - Management Policy
   - Business Electives (remainder of credits)
   - Unrestricted Electives (remainder of credits)

124 total credits

* Written communication and technical writing courses do not fulfill this requirement.
Bachelor of Science in
Civil Engineering Technology

The goals of the civil engineering technology program are to provide quality undergraduate studies, prepare students to enter professional careers and graduate study, and find employment in their field after graduation. This program values and encourages academic and intellectual achievement of the highest quality and the technical competencies inherent to the field of civil engineering technology. The faculty is committed to the integration of these elements in a coherent program of higher education.

Civil engineering technology students may choose one or more emphases in transportation, structural, or construction. Students study a diversity of topics including structural analysis and design, water and waste water systems, highway planning and design, and construction administration. Other courses include hydrology and hydraulics, construction estimating and scheduling, finite element analysis, advanced steel design, and advanced concrete structures.

Civil Engineering Technology is accredited by the Technology Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 - telephone: (410) 347-7700. In January 2005, the American Society for Engineering Educators (ASEE) ranked SUNYIT tenth in the nation based on the number of engineering technology bachelor's degrees awarded.

Areas of Emphasis

Graduates of the program earn six years of education/experience credit towards licensure in New York State as a Professional Engineer. After graduation, they are eligible to register for the next offering of Part A of the Professional Engineering examination, Fundamentals of Engineering. Structural, transportation and construction are the primary areas of emphasis.

Structural

Students choosing the structural emphasis are most often employed by engineering design firms, by design/build construction firms, or by local, state and federal governments. Coursework is provided in areas of structural analysis, building/structural design, conceptual to final design projects, and finite element analysis.

Transportation

Students choosing the transportation emphasis are most often employed by county or city highway departments, by state or federal departments of transportation or by road/bridge construction contractors. Coursework is provided in structural analysis, transportation planning, design of roadways, and drainage design.

Construction

Students choosing the construction emphasis are most often employed by design/build firms, construction contractors, and by local, state and federal agencies. Course work is provided in project scheduling and estimating, project administration, construction methods and structural analysis.

CAD Proficiency

Success in the Engineering Technology field is strongly dependent on a proficiency in computer aided drafting (CAD). Many of our graduating students will be actively involved with CAD or will work directly with those who are. To ensure a minimum level of proficiency, all students are required to pass a CAD Test to graduate. CAD proficiency may be in either AutoCAD or Microstation.

Civil Laboratories

Civil laboratories are heavily computerized. Students entering the program are expected to have basic skills in word processing, spreadsheets, computer aided drafting, and the use of the internet. Labs encompass all aspects of civil engineering technology and the computer applications which represent industry standards. Laboratories are PC-based networks running applications in AutoCAD, Microstation, RAM Structural System, InRoads, Haestad Methods, Microsoft Project and Primavera Project Planner.

Admission

Transfer of Semester Hours

1. Students must submit to the director of admissions official transcripts of any college courses they wish to have evaluated for transfer of semester hours.

2. A cumulative GPA of 2.75 is required for admission. Prospective students with a lower GPA may be considered on an individual basis.

3. Only courses with a minimum grade of “C” are considered for transfer.
B.S. Degree Requirements

To earn a bachelor of science (B.S.) degree in civil engineering technology, a student must complete a minimum of 128 credit hours and fulfill the following requirements:

I. Arts and Science (60 credits)

A. Mathematics and Science (24 credits)
- Calculus I
- Calculus II
- Calculus-Based Math Elective
- Physics I (Lab)
- Physics II (Lab)
- Chemistry (Lab)
- Math/Science Electives (Balance of 24 credits)

B. Liberal Arts and Communications (24 credits)
- Oral Communication
- Basic Communication
- Upper Division Written Communication
- Social Science*
- American History*
- Western Civilization*
- Other World Civilizations*
- Humanities*
- Arts*
- Foreign Language*
- Liberal Arts Elective (Balance of 24 credits)

C. Computer Programming Language (3 credits)

D. Arts and Science Electives (Balance to bring the total of A, B, C, and D to 60 credits)

II. Technical Courses (54 credits)

A. Required Core
- Introduction to Engineering Technology (CTC 101) 2
- Statics (CTC 218) 2
- Strength of Materials (CTC 222) 2
- Engineering Graphics (CTC 212, 213, MTC 162) 2
- Elementary Surveying (CTC 250)* 3
- Soils and Foundations (CTC 255)* 3
- Steel or Concrete Design (CTC 422 or 424) 3
- Hydrology (CTC 260) 2
- Hydraulics (CTC 261) 2
- Transportation (CTC 340 or 440) 3
- Professionalism in the Workplace (CTC 301) 2
- Structural Analysis (CTC 320) 4
- Water and Wastewater Systems (CTC 450) 4
- Economic Analysis in Technology (CTC 475) 4
- Capstone Design (CTC 490) 3

*Offered at Mohawk Valley Community College through the “Mohawk Valley College Consortium Agreement”

Select One Emphasis

Structural (12 credits minimum)
- Core Courses (8 credits)
  Design of Steel Structures (CTC 422)
  Design of Concrete Structures (CTC 424)
- Required Elective (Minimum 4 credits)
  Upper Level Civil Engineering (CTC XXX)
  Technology Elective

Transportation (12 credits minimum)
- Core Courses (8 credits)
  Transportation Analysis (CTC 340)
  Highway Design (CTC 440)
- Required Elective (Minimum 4 credits)
  Upper Level Civil Engineering (CTC XXX)
  Technology Elective

Construction (12 credits minimum)
- Core Courses (8 credits)
  Construction Estimating and Scheduling (CTC 415)
  Construction Administration (CTC 470)
- Required Elective (Minimum 4 credits)
  Upper Level Civil Engineering (CTC XXX)
  Technology Elective

Civil Tech Electives (Balance of 54 credits)

III. Open Electives (Balance of 128 credits)

128 Total Credits
Bachelor of Science in Communication and Information Design

The Communication and Information Design (CID) Bachelor of Science (B.S.) degree program deals with all aspects of planning, organizing, writing and designing of communication media. The program emphasizes new media digital tools such as website design and writing, video scripting and production, game design, digital photography, animation. The program studies how social media tools impact information preparation, organization, and delivery. Students develop a strong understanding of best practices and gain familiarity with techniques to analyze and evaluate the effectiveness of new media in getting a message across.

Graduates from the program find employment in social media strategy, web design, technical writing and editing, video production, instructional design technologies, training and teaching, communication management, computer documentation, public relations, graphics, journalism, and document design. Students may also go on to graduate study in information design (see below), graphic design, journalism, social media, computer interface design, and media studies.

Accelerated BS/MS Program in Communication and Information Design and Information Design and Technology

At any time prior to their senior year, CID students can apply to enter the new accelerated BS/MS program. The joint BS/MS program is a well-integrated program that permits students to complete both a bachelor's degree in Communication and Information Design, and a master's degree in Information Design and Technology in a reduced time frame with a reduced total number of total credits. Go to http://cid.sunyit.edu for admission requirements and for further details.

BS/MS Degree Requirements

Completion of the joint BS/MS program requires a minimum of 145 credit hours, including a minimum of 33 semester hours of graduate study. All specific requirements for both the BS and the MS degrees must be met. Students in the joint program may apply up to six credits of graduate coursework to both the undergraduate and graduate degrees simultaneously. The double-counted coursework will be chosen from the Core and Elective Courses in the graduate program, and up to 6 of these credits may be applied to the undergraduate track electives. The intent of this program option is to allow well-prepared students to finish both a bachelor's and master's degree in a reduced time frame. The graduate program is completely online, so students can choose to leave the area after completing the CID requirements and continue taking courses for the MS degree.

Design Studios and Laboratories

SUNYIT has two 24-station digital design studios to support advanced writing, design, animation and illustration courses. The studios include dual-boot (PC and Mac operating systems) Apple Macintosh computers with 27" displays and a full suite of software to support graphic design, digital photography, video, animation, photography, text layout and other information design projects. Software includes Adobe Creative Suite products, including Photoshop, Flash, InDesign, Illustrator, and Dreamweaver. In the fall of 2011 a media lab based around the needs of CID majors, became a cornerstone of the new Learning Commons in Cayan Library with eight Mac Pros with dual monitors loaded with Final Cut Pro and Adobe After Effects.

Real World Experience

The program emphasizes working with clients in professional situations. In select courses, students work with clients and complete quality deliverables. In capstone courses, students craft print and multi-media digital portfolios and present them in presentations and mock interviews with professionals in their fields. Students work under the direction of lead writers, documentation specialists or publication managers, and students are exposed to the demands and constraints of the career in organizational settings. In COM 495, students plan and complete a documentation project for a domestic or international client; students work through the entire development process and produce documentation for mass distribution. Additionally, in COM 499 students build an online and print portfolio of their work, which is later reviewed by the program's advisory board in mock job interviews and in end-of-semester presentations. This portfolio can then be used in job interviews. Past student portfolios can be viewed from http://cid.sunyit.edu.

Degree Requirements Overview

To earn a Bachelor of Science (B.S.) degree in Communication and Information Design, a student must fulfill the following requirements (transfer credits usually fulfill half the degree requirements):

- Satisfactory completion of at least 124 semester hours of college level work distributed as follows:
  A. General Education Requirements 31-44 credits
  B. Program Requirements 44 credits
  C. General Electives 36-49 credits
  Total 124 credits

- Satisfactory completion of at least 60 semester hours of upper division course work, at least 30 of which must be taken at SUNYIT.

- Achievement of at least 2.00 cumulative quality point average in course work taken at SUNYIT, and a “C” or better in all Communication and Information Design Core courses.
B.S. Degree Requirements

The general requirements for the B.S. degree in Communication and Information Design ensure that students have a basic knowledge of mathematics, science, behavioral/social science, computer science, and liberal arts. The required communication, new media, and graphic design courses provide students with communication skills as well as a theoretical background. The career tracks give students the expertise in a single field or in multiple fields that employers expect. In response to the growing trend toward new media, social media, and graphic design, the program has added a number of courses in these areas.

I. General Education (31-44 credits)
- Natural Science Coursework/Lab Science
- Science Elective
- Math
- Basic Communication
- Foreign Language
- Arts
- Humanities
- Social Sciences
- American History
- Western Civilization
- Other World Civilization

II. Program Requirements (28 credits)
- COM 302 Presentational Speaking
- COM 106/306 Report Writing/Technical Communication
- COM 320 Information Design
- COM 380 Communication Theory
- COM *** Professional Writing Elective
- COM 495 Senior Practicum in Communication
- COM 499 Portfolio and Professional Development

*** COM 206, 240, 311, 350, or 400. COM 308 and 305 do not meet this requirement.

III. Career Track (16 credits)
Students can choose any four courses from ANY of the following tracks, in consultation with their adviser. Students can transfer up to four credits in this area.

Graphic Design
- ART 210 Principles of 2D Design
- COM 212 Digital Photography and Imaging
- COM 213 Digital Animation
- COM 360 Product Design and Testing
- COM 414 Advanced Digital Graphic Design
- COM 416 Advanced Digital Animation
- COM 417 Visual Identity and Branding
- COM 420 Web Site Design
- COM 460 Advanced Web Site Design
- COM 490 Special Topics in Communications
- MKT 321 Advertising Management
- PHI 310 Technology and Ethics

Professional Writing/Editing
- COM 206 Ethnographic Writing
- COM 310 Technical Editing
- COM 311 Public Relations Writing
- COM 350 Visual Thinking and Online Documentation
- COM 353 Newswriting
- COM 354 Newspaper Production
- COM 400 Computer Software Documentation
- COM 410 Communication Research Methods
- COM 415 Writing About Imagery
- COM 490 Special Topics in Communications
- PHI 310 Technology and Ethics

New Media
- COM 213 Digital Animation
- COM 240 Writing for New Media
- COM 262 Online Politics
- COM 316 Media and Communication
- COM 341 Video and Communication
- COM 342 Field and Studio Video Production
- COM 411 Communicating on Computer Networks: Issues and Implications
- COM 416 Advanced Digital Animation
- COM 490 Special Topics in Communications
- PHI 350 Technology and Ethics
- ENG 360 Reading the Film

A “C” or better is required in all core classes and a 2.00 in the major as a whole.

III. Electives (36-49 credits)

124 Total Credits
Bachelor of Science in
Community and Behavioral Health

The CBH degree is interdisciplinary in nature and focuses on the sociological and psychological factors associated with physical, mental, and social health. The degree is designed to meet the needs of students with interests in the health-related fields of medicine, dentistry, nursing, community health, health psychology, medical social work, and rehabilitation counseling. This program allows students to customize a program of study from electives in both psychology and sociology to meet their academic and career goals. It also allows individuals pursuing degrees in nursing to expand and enhance their career options through a double major.

The degree in CBH prepares graduates for employment opportunities in a wide range of health fields, including the growing fields of gerontology and veteran re-entry. Employers in health-related settings prefer students with interdisciplinary degrees rooted in the sociological, psychological, and anthropological traditions. These disciplines provide students with an understanding of the broader social context, as well as the dynamics of major social inequalities (such as race, class, gender, aging, and diversity), that are so important in these settings, making them more desirable employees.

Career Opportunities

Students graduating with a degree in CBH will have the opportunity to pursue careers in a variety of settings including: positions in health promotion and prevention programs, case manager, counselor, educator, (medical) social services worker, nursing home administrator (those who complete the required HSM courses may sit for the Nursing Home Administrator state exam).

Students may enter graduate programs in medical or dental school (with appropriate physical science requirements), or in Social Work, Sociology, or Psychology, including mental health counseling.

Degree Requirements Overview

To earn a Bachelor of Science (B.S.) degree in Community and Behavioral Health, a student must fulfill the following requirements:

- Satisfactory completion of at least 124 semester hours of college-level work distributed as follows:
  - 28 credit hours of core courses with a minimum of “C” grade;
  - 24 credit hours of elective work composed of 12 credits in psychology (at least 4 of these must be at the 400-level), and 12 credits in sociology (at least 4 of these must be at the 400-level). One psychology and one sociology course at the lower level may be substituted with an HSM course.
  - 62 credit hours in the arts and sciences;
  - 45 credit hours at the upper-division level;
  - additional elective work, either in arts and sciences or other disciplines, for a total of 124 credits.
  - Achievement of at least 2.0 cumulative GPA.

B.S. Degree Requirements

I. General Education (36-48 credits)

- American History 3-4
- Basic Communication 3-4
- Foreign Language 3-4
- Humanities 3-4
- Mathematics 3-4
- Other World Civilizations 3-4
- Natural Sciences
  - Lab Science (suggested: BIO 215, BIO 216) 3-4
  - Other Science (suggested: BIO 224) 3-4
- Social Sciences 3-4
- The Arts 3-4
- Western Civilization 3-4
- Upper Division Writing 3-4
- Arts & Science Electives (balance of remaining credits)

II. Program Requirements (52 credits)

A. Core Courses (28 credits)

All majors will be required to complete the following core courses:

- SOC 100 Introduction to Sociology
- SOC 101 Principles of Psychology
- SOC 377 Health Psychology
- SOC 370 Sociology of Health and Illness
- SOC 332 Research Methods of Psych OR
- SOC 333 Methods of Inquiry OR
- NUR 390 Nursing Methods
- PSY 493 Senior Seminar in Psychology and Health OR
- SOC 493 Senior Seminar in Sociology and Health
- STA 100 Statistics

B. Program Electives (24 credits)

All majors will be required to complete 12 credits in sociology and 12 credits in psychology, at least eight credits of each must be at the 400-level.

- HSM 201 Health Care Delivery in the U.S.
- PSY 220 Developmental Psych Across the Lifespan
- PSY 322 Abnormal Psych
- PSY 331 Psych of Personality
- PSY 342 Social Psych
- PSY 362 Learning and Motivation
- PSY 373 Death, Dying and Bereavement
- PSY 385 Evaluation Research
- PSY 445 Group Dynamics and Interpersonal Communication
- PSY 460 Neuropsychology
- PSY 470 Psych Testing
- PSY 477 Principles of Psych Counseling
- PSY 492 Practicum in Psych
- SOC 110 Social Problems
- SOC 210 Sociology of the Family
- SOC 220 Soc of Gender
- SOC 230 Soc of Race and Ethnic Relations
- SOC 314 Soc of Deviance
- SOC 350 Chemical Dependency
- SOC 381 Social Gerontology
- SOC 410 Power and Violence in the Family
- SOC 411 Soc of Community
- SOC 424 Social Welfare Policy
- SOC 490 Returning from War
- SOC 495 Practicum in Sociology
- ANT 382 Cultures, Health and Healing
- HSM 309 Health Care in the Law
- HSM 311 Health Care Management
- HSM 318 Human Resource Management
- HSM 401 Intro to Epidemiology
- HSM 410 Alternative Methods of Health Care Delivery
- HSM 422 Nursing Home Administration

III. General Electives (balance of 124 credits)

124 Total Credits
Bachelor of Science in
Computer Engineering Technology

Graduates of this program are prepared for positions which rely on an understanding of hardware and software applications of digital, microprocessor, and computer-based systems. An emphasis is placed on the technical, analytical, problem-solving and communications skills necessary to excel in the technical workplace. Some companies hire computer engineering technology graduates to install, maintain, calibrate and repair both hardware and software systems for their customers. Other students may work on integrated systems which are comprised of both hardware and software components.

The Bachelor of Science (B.S.) degree in computer engineering technology is designed for students wishing to prepare for professional careers, and whose interests lie at the intersection of computer science and electrical/electronics technology.

Computer Engineering Technology is accredited by the Technology Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 - telephone: (410) 347-7700. In January 2005, the American Society for Engineering Educators (ASEE) ranked SUNYIT tenth in the nation based on the number of engineering technology bachelor’s degrees awarded.

Computer Engineering Technology Employers

The following organizations have been reported as hiring CET graduates:

Placement

A degree in computer engineering technology has helped build rewarding careers for many of SUNYIT’s graduates. Some students go on to obtain an M.S. Degree in Computer Engineering.

B.S. Degree Requirements

To earn a Bachelor of Science (B.S.) degree in computer engineering technology, a student must complete 128 credits, with a minimum of 60 credits in arts and sciences disciplines, and complete the following degree requirements:

I. Arts & Science (24 Credits)

A. Liberal Arts
   Oral Communications
   Basic Communications
   Upper-Division Writing
   Humanities*
   Social Science*
   American History*
   Western Civilization*
   Non-Western Civilization*
   Fine Arts*
   Foreign Language*
   * Complete at least four out of the above seven categories.

B. Mathematics and Science (24 Credits)
   Mathematics, including the following:
   Differential Calculus (MAT121)
   Integral Calculus (MAT122)
   Restricted Math Elective (MAT115, MAT230, MAT340, or MAT 413)
   Math/Science Elective (Balance of 24 credits)

II. Technical Courses (62 credits)

A. Required Core
   QC and Workplace Issues (CET 299)
   Microprocessors & Embedded System Programming (CET342)
   Communication and Computer Networks (CET416)
   Microprogramming and Computer Architecture (CET429)
   PC Integration and Maintenance (CET431)
   Programming Foundations (CS108)
   Object Oriented Programming (CS244)
   Data Structures (CS240)
   Two Programming Languages (including one course in: C, C++, or Java)
   Integrative Capstone Course (CET 423 or ETC 445)

   CET, CS, CSC, ETC, or IS (Balance of 62 credits)

III. Open Electives (Total Credits 128)

A residency of 24 hours in the major is required to graduate.
Computer Science

The field of computing enables much of the ongoing revolution in information technology and communications. Its techniques, tools and problem-solving approaches have proven most powerful and effective. Computing professionals define and provide the new information infrastructure thereby changing society and culture by extending and enhancing everyone’s abilities. SUNYIT recognizes the need for trained professionals in the computer field. Three undergraduate programs provide the flexibility that allows students to position themselves in the field according to their own strengths and interests.

B.S. in Computer & Information Science

The Bachelor of Science program in computer and information science provides a broad education in major areas of the field. The program, which closely follows the Association of Computing Machinery (ACM) recommendations, gives students the flexibility to concentrate studies according to their interests.

The general educative goal of the undergraduate program is to ensure that each graduate has a solid background in all the fundamental areas of computer science and to provide a sufficiently wide spectrum of advanced electives to allow each student to fashion a specialization (or concentration) suited to their strengths and interests. Some concentrations that could be constructed from current and recent offerings are:

- Information Assurance/Data Security
- Entertainment Computing (including game design and game programming)
- System Administration
- Scientific and Engineering Computing
- Network and Grid Programming
- System Modelling and Simulation
- Information Technology

B.S. in Computer Information Systems

The Bachelor of Science program in computer information systems places an emphasis on business applications of computing. Students acquire basic skills in computer systems areas, including programming, database management, and other business-oriented areas. The program is designed to follow the curricular guidelines of the ACM, which are endorsed by the Association for Information Technology Professionals (AITP). Many graduates who pursue advanced study enter graduate programs in management or business administration. Also, with appropriate course selection, a student in computer/information systems may be prepared to continue on into the M.S. program in computer and information science.

B.S. in Applied Computing

The Bachelor of Science program in applied computing prepares the graduate to apply the analytic and programming skills of the science of computing to a cognate intellectual domain. The degree combines the core of the baccalaureate program in computer information systems or computer and information science with strong academic preparation in another area of study. The capstone project requires the student to apply the tools and techniques of science of computing to the cognate area through the design and implementation of a project. The cognate area requirement may be fulfilled by an associate degree in the cognate area, completion of an approved SUNYIT minor, or courses in another area approved by an advisor. With appropriate course selection, the applied computing graduate may continue into the M.S. program in computer and information science.

BS/MS in Computer and Information Science

The joint BS/MS program is a well-integrated program that permits students to complete both a bachelor’s degree and a master’s degree in computer and information science in a reduced time frame with a reduced total number of credits.

Requirements

Completion of the joint BS/MS program requires a minimum of 145 semester hours, including a minimum of 33 semester hours of graduate study. All specific requirements for both the BS and the MS degrees must be met. Students in the joint program may apply up to twelve credits of graduate coursework to both the undergraduate and graduate degrees simultaneously. Students in the joint program may register for CSC 500 - Discrete Structures which will satisfy the undergraduate Finite or Discrete Math requirement and will simultaneously be applied as a general graduate elective. Two graduate courses may be applied as undergraduate “Advanced” computing science electives. One or two other graduate courses (depending on whether students earned credit for CSC 500) may be applied as undergraduate unrestricted electives. Graduate bridge courses, other than CSC 500, may not be applied simultaneously to both degrees.

Status

A student enrolled in the joint program will be considered to remain in undergraduate status until the completion of 124 semester hours, and thereafter tuition and fees will be charged at the graduate level. The BS degree will be awarded at such time as all the requirements for that degree are satisfactorily met. Students are expected to complete their BS program requirements prior to pursuit of the MS degree except where those two programs overlap.

Academic Standing

Continued matriculation in the joint program requires maintenance of a GPA of 3.0 for courses taken at SUNYIT in each of the following categories: (a) all courses applicable to the undergraduate degree; (b) computer science courses applicable to the undergraduate degree; (c) all graduate courses. Students with a GPA of less than 3.0 in any of these categories will be placed on academic probation in the program. Students who are on academic probation for any two semesters or who have a GPA of less than 2.50 in any of these categories will be academically dismissed from the joint program. Students who are academically dismissed but have not yet completed the baccalaureate program but whose performance constitutes satisfactory performance in the undergraduate program will automatically be placed in that program.
Admission to the BS/MS Program

Admission to the BS/MS program may be achieved, and enrollment maintained, in one of the following ways:

A. As an entering freshman; continued enrollment in the joint program requires achievement of grades of B or better in CS 108, CS 240, CS 249, MAT 115 (or MAT 413), and a mathematics elective (calculus, linear algebra, or statistics). In addition, students must have an overall GPA of at least 3.0 at the end of the semester in which the first 60 credits have been completed.

B. Upon initial transfer to SUNYIT; students must have earned grades of B or better in CS 108, CS 240, CS 249, MAT 115 (or MAT 413), and in a mathematics elective (or in their transfer equivalents), and must have a transfer GPA of at least 3.0.

C. Subsequent to initial enrollment at SUNYIT; students must receive grades of B or better in those courses (or their transfer equivalents) listed in A) and B) above, have an overall GPA of at least 3.0 for all courses taken at SUNYIT, and have a GPA of at least 3.2 for courses in their major.

Students entering the joint BS/MS program must not have completed more than 94 credit hours toward their Bachelor’s degree, and must be able to complete all requirements for the Bachelor’s degree within the first 124 semester hours earned.

Academic Minors

CS and CIS students are encouraged to select an academic minor and to use the minor’s course of study as a means of satisfying open electives requirements and upper-division electives requirements. Academic minors enable students to pursue in-depth education in a second discipline that supports or enhances the use and application of their computing and information systems education. Attaining an academic minor in addition to a B.S. may require a student to take more than 124 total credits to graduate. Students who declare a minor are strongly encouraged to consult with their advisors for guidance prior to course selection and registration.

UNIX Proficiency

Undergraduate majors in Computer and Information Science, Computer Information Systems, and Applied Computing are expected to be familiar with the UNIX (LINUX) operating system. This may be achieved through prior coursework, self-study, or enrollment in CS 307 - The UNIX Programming Environment.

Computer Science Laboratories

The Department of Computer and Information Sciences maintains six labs containing a mix of operating systems and software in support of the Computer and Information Science and the Computer Information Systems programs. These labs are interconnected on a modern high speed network and supported by multiple file servers for central data storage and is accessible both on and off campus. Students are strongly encouraged to view the CS website (www.cs.sunyit.edu) and access the large quantity of software and services available. This includes remote access, databases (mysql, PostgreSQL, and Oracle), software repositories, streaming video, and many other services. The Computer Science network is maintained by full time staff with the assistance of student administrators.

DogNET UNIX Lab (Kunsela C-012) provides access to UNIX workstations (named after dogs). Twenty-five workstations (currently Pentium IV/3.4GHz with 17” flat panel monitors). These machines run the Gentoo Linux operating system and provide access to many programs for internet access, multimedia applications, publishing, language compilers, etc. Used for computer science courses in programming languages, operating systems, networking, web development, and system administration, the lab has open access during building hours when not occupied by a class.

Microsoft Windows Labs (Kunsela C-014 and Kunsela C-109) provide access to the MS Windows operating system and software. The C-014 lab contains twenty-five workstations (currently Core 2 Duo/3.0 GHz, 2 GB RAM with 17” flat panel monitors and DVD/RW) and has open access during building hours when not occupied by a class. The C-109 special purpose lab contains six workstations and is ideal for small groups working collaboratively on projects. These labs support instruction and experimentation in object-oriented programming, client-server and distributed computing (networking, systems administration and interoperability with other platforms), collaborative computing (web development, videoconferencing, multimedia). Programming environments supported include SUNJava, Visual Studio (C#, J#, C++, Visual Basic), FORTRAN 90, Prolog, LISP, ML-Object-Caml, APL. Application software includes Microsoft Office, Sharepoint, Publisher, Visio, Matlab, Maple, and several Adobe titles.
### B.S. in Computer and Information Science

#### I. General Education
- Composition/Communication
- Humanities
- Arts
- Social/Behavioral Sciences
- Laboratory Science
- Science Elective
- Foreign Language
  - Requirement waived if the student attained a score of 85 or higher on a third year Regents examination in a foreign language. Consult with an advisor for other means of satisfying this requirement.
- American History
- Western Civilization
- Other Civilizations
- Mathematics
  - Two courses; must include one course in Finite or Discrete Mathematics (MAT 115 or MAT 413) with a grade of C or better, and one course selected from Calculus, Linear Algebra, or Statistics.

#### II. Computer Science

##### A. Introductory Courses
- Computing Fundamentals (CS 108)*
- Computer Organization (CS 220)
- Data Structures and Algorithms (CS 240)*
  *Minimum grade of C required in CS 108 and CS 240 or their transferred equivalents.

##### B. Intermediate Courses
- CS 249 Object-Oriented Programming
- CS 330 Operating Systems and Networking
- CS 350 Information and Knowledge Management
- CS 370 Software Engineering

##### C. Advanced Electives
- Three courses to be selected from electives listed below or from graduate courses. Courses must be taken at SUNYIT; cannot be transferred in.
  - CS 345 Logic Design
  - CS 381 Principles of Computer Security and Cryptography
  - CS 407 UNIX System Administration
  - CS 420 Numerical Computing
  - CS 421 Computational Linear Algebra
  - CS 431 Principles of Programming Languages
  - CS 441 Computer Architecture
  - CS 445 UNIX Network Programming
  - CS 446 Local Area Network Architecture
  - CS 450 Computer Graphics
  - CS 451 Distributed Systems
  - CS 454 System Simulation
  - CS 477 Algorithms
  - CS 480 Compiler Design
  - CS 490 Special Topics in Computer Science*
  - CS 491 Independent Study
  - CS 495 Artificial Intelligence
  - CS 5xx Graduate Computer Science Courses**
  *May be repeated with different topics
  **Up to two graduate CS courses (other than bridge courses) may be used to fulfill this requirement. Enrollment in graduate courses is restricted by grade point average. See the graduate catalog for descriptions of graduate courses.

#### D. Capstone
- CS 498 Project in Computer Science

#### III. Open Electives
**Open Upper-division Computing Electives**
- The following courses are available to CS majors for open elective credit:
  - CS 307 The UNIX Programming Environment
  - CS 311 Data Analysis
  - CS 324 Internet Tools in Windows
  - CS 351 Web Development and Internet Programming
  - CS 409 Software Project Management
  - CS 489 Cooperative Work Study in Computer Science
  - CS 491 Independent Study
  - IS 305 Applications Programming with COBOL
  - IS 310 Hardware and Network Infrastructure
  - IS 315 Networking of Information Systems
  - IS 320 Systems Analysis and Design
  - IS 325 Database Management Systems
  - IS 330 Decision Support and Intelligent Systems
  - IS 340 E-Commerce
  - IS 470 Database Programming
  - IS 490 Special Topics in Information Systems
- 124 Total Credits

---

### B.S. in Computer Information Systems

#### I. General Education
- Composition/Communication
- Humanities
- Arts
- Social/Behavioral Sciences
- Laboratory Science
- Science Elective
- Foreign Language
  - Requirement waived if the student attained a score of 85 or higher on a third year Regents examination in a foreign language. Consult with an advisor for other means of satisfying this requirement.
- American History
- Western Civilization
- Other Civilizations
- Mathematics
  - Two courses; must include one course in Finite or Discrete Mathematics (MAT 115 or MAT 413) with a grade of C or better, and one course selected from Calculus, Linear Algebra, or Statistics.

#### II. Computer Information Systems

##### A. Introductory Courses
- CS 108 Computing Fundamentals
- CS 240 Data Structures and Algorithms
  *Minimum grade of C required in CS 108 and CS 240 or their transferred equivalents.

##### B. Intermediate Courses
- IS 310 Hardware and Network Infrastructure
- IS 320 Systems Analysis and Design
- IS 325 Database Management Systems
- IS 330 Decision Support and Intelligent Systems

##### C. Business and Management Courses
- Any two courses (minimum of six credits), one of which must be 300 level or higher, chosen from courses with the following prefixes: ACC, BUS, ECO, FIN, MGT, MKT.
D. Upper Division Electives
(Courses must be taken at SUNYIT; cannot be transferred in)

A minimum of 12 credits of coursework at the 300 level or above. The list below is not comprehensive; it represents CS and IS courses taught on a regular basis. Each student's career goals should influence courses selected. For example, a student interested in a career in banking or insurance is well advised to take IS 305 - Application Programming with COBOL. Note that many CS courses require a level of knowledge in computer science that is not provided by the introductory courses in the discipline; to facilitate effective course selection and ensure that prerequisites are met, students should consult with their advisor prior to course selection.

- IS 305 Application Programming with COBOL
- IS 315 Networking of Information Systems
- IS 340 E-Commerce
- IS 470 Database Programming
- IS 490 Special Topics in Information Systems
- IS 491 Independent Study
- CS 307 The Unix Programming Environment
- CS 350 Information and Knowledge Management
- CS 351 Web Development and Internet Programming
- CS 370 Software Engineering
- CS 407 UNIX System Administration
- CS 409 Software Project Management
- CS 489 Cooperative Work Study in Computer Science
- CS 5xx Graduate Computer Science Courses*  
  * Up to two graduate CS courses (other than bridge courses) may be used to fulfill this requirement. Enrollment in graduate courses is restricted by grade point average.

E. Capstone
- CS 498 Project in Computer Science

III. Unrestricted Electives
Additional coursework as required to total 124 credits.

124 Total Credits

B.S. in Applied Computing

I. General Education
- Composition/Communication
- Humanities
- Arts
- Social/Behavioral Sciences
- Laboratory Science
- Science Elective
- Foreign Language
  Requirement waived if the student attained a score of 85 or higher on a third year Regents examination in a foreign language. Consult with an advisor for other means of satisfying this requirement.
- American History
- Western Civilization
- Other Civilizations
- Mathematics
  Two courses; must include one course in Finite or Discrete Mathematics (MAT 115 or MAT 413) with a grade of C or better, and one course selected from Calculus, Linear Algebra, or Statistics.
- Upper-Division Writing Course

II. Select one of two tracks

Computer and Information Science Track

A. Core Requirements
- Computing Fundamentals (CS 108)*
- Data Structures (CS 240)*
  *Minimum grade of C required in CS 108 and CS 240 or their transferred equivalents.

B. Intermediate Requirements
- Computer Organization (CS 220)
- Object Oriented Programming (CS 249)

C. Advanced Requirements
Select two of the three course options
- Operating Systems & Networking (CS 330)*
- Information Knowledge & Management (CS 350) *
- Software Engineering (CS 370)*

D. Advanced Electives
Two of the following courses (must be taken at SUNYIT; cannot be transferred in)
- CS 345 Logic Design
- CS 381 Principles of Computer Security and Cryptography
- CS 407 UNIX System Administration
- CS 420 Numerical Computing
- CS 421 Computational Linear Algebra
- CS 431 Principles of Programming Languages
- CS 441 Computer Architecture
- CS 445 UNIX Network Programming
- CS 446 Local Area Network Architecture
- CS 450 Computer Graphics
- CS 451 Distributed Systems
- CS 454 System Simulation
- CS 477 Algorithms
- CS 480 Compiler Design
- CS 490 Special Topics in Computer Science*
- CS 491 Independent Study
- CS 495 Artificial Intelligence
- CS 5xx Graduate Computer Science Courses**
  * May be repeated with different topics
  ** Up to two graduate CS courses (other than bridge courses) may be used to fulfill this requirement. Enrollment in graduate courses is restricted by grade point average. See the graduate catalog for descriptions of graduate courses.

E. Capstone
- CS 498 Project in Computer Science

Computer Information Systems Track

A. Core Requirements
- Computing Fundamentals (CS 108)
- Data Structures (CS 240)
  Minimum grade required in CS 108 and CS 240 or their transferred equivalents.

B. Intermediate Requirements
- Hardware and Network Infrastructure (IS 310)
- System Analysis & Design (IS 320)
Data Base Management (IS 325)  
Decision Support & Intelligent Systems (IS 330)

C. Advanced Electives
Two of the following courses, no less than 8 credits (must be taken at SUNYIT; cannot be transferred in)
CS 345 Logic Design
CS 381 Principles of Computer Security and Cryptography
CS 407 UNIX System Administration
CS 420 Numerical Computing
CS 421 Computational Linear Algebra
CS 431 Principles of Programming Languages
CS 441 Computer Architecture
CS 445 UNIX Network Programming
CS 446 Local Area Network Architecture
CS 450 Computer Graphics
CS 451 Distributed Systems
CS 454 System Simulation
CS 477 Algorithms
CS 480 Compiler Design
CS 490 Special Topics in Computer Science*
CS 491 Independent Study
CS 495 Artificial Intelligence
CS 5xx Graduate Computer Science Courses*

From time to time the department may permit students to apply other courses in the department as advanced electives by petition and by completing additional assignments in the course not required of students who are not applying the course as an advanced elective. Where available, this option will be published in the schedule of courses.

*May be repeated with different topics
**Up to two graduate CS courses (other than bridge courses) may be used to fulfill this requirement. Enrollment in graduate courses is restricted by grade point average. See the graduate catalog for descriptions of graduate courses.

D. Capstone
IS 495 Computer Information Systems Practicum

III. Cognate Area Requirements
A minimum of 20 credits satisfied in one of the following ways:

• any approved SUNYIT minor except Computer Information Science or Computer Information Systems.
• an associate degree in any area other than computer science, data processing, information technology, information systems, or similar titles, or in individual studies, general studies, or similar titles lacking a substantial focus.
• a minimum of twenty credits in a single discipline or interrelated disciplines subject to the approval of the department chair who shall consult with a faculty member in the pertinent discipline.

IV. Unrestricted Electives
Additional coursework as required to total 124 credits.

124 Total Credits
Electrical and Computer Engineering (ECE), one of the broadest engineering disciplines, is the branch of engineering that focuses on applying the laws of physics governing electricity, magnetism and light to develop products and services for the benefit of human kind. In addition to the traditional roles of designing, analyzing and working with components, circuits, and systems that utilize electrons and photons, electrical and computer engineers are also often engaged in systems integration, information technology, software development and frequently serve on multidisciplinary teams.

Our program provides breadth across the discipline and a balance between theory and application. In addition, a large number of laboratory courses provide students opportunities for hands-on learning. The program provides graduates the skills and knowledge necessary for a dynamic career in electrical and computer engineering.

The educational and career objectives of the program are to provide graduates with i) a solid foundation in mathematics, physical sciences, humanities and social sciences and the fundamentals of engineering design and analysis; ii) the technical knowledge and critical thinking skills required for the professional practice of electrical and computer engineering, and for seeking advanced degrees; and iii) the development of communication skills, teamwork, lifelong learning, and understanding of professional, ethical and social responsibility within a global context.

SUNYIT’s engineering facilities include 5 highly specialized laboratories with a multitude of electrical and electronic equipment, including function generators, power supplies, multi-meters, spectrum analyzers, oscilloscopes, microcontroller demonstration boards, logic analyzers, electrical and electronic components (resistors, capacitors, inductors, 74xx integrated circuit chips), digital probes, simulations software (Matlab, Electronics Workbench, Pspice, PCAD), and general purpose computers. Through a comprehensive approach towards experimentation, simulation and analysis, engineering skills and aptitudes are challenged from theory to practice, enabling and preparing SUNYIT ECE graduates to thrive and capitalize on future research and development opportunities.

The ECE program offers two areas of concentration: electrical engineering (EE) and computer engineering (CoE). The EE track focuses on traditional EE disciplines including signal processing, semiconductor devices, communications and control theory. The CoE track emphasizes digital systems design, computer architecture, networking, and systems.

**Degree Requirements Overview**

The requirements for the BSECE program at SUNYIT are governed not only by the State Education requirements, but also those of EAC/ABET. In order to earn the BSECE degree, the student’s coursework must include:

a. One year of a combination of college-level mathematics and basic sciences (some with experimental experience) appropriate to electrical and computer engineering;

b. Nearly two years of engineering topics, consisting of engineering sciences, engineering design, and engineering topics appropriate to electrical and computer engineering;

c. A general education component that complements the technical content of the electrical and computer engineering curriculum and is consistent with the program and institution objectives;

d. A professional component that covers career issues and provides flexibility to choose electives that support the business side of engineering (e.g., finance and/or other business courses)
### B.S. Degree Requirements

To receive the BSECE degree, students must complete a minimum of 125 credit hours in the courses outlined below with a grade-point average of 2.0. All students must meet the General Education* requirements for the program. Note: A minimum of 60 total credit hours in Arts and Sciences and 125 total credit hours overall is required.

#### I. Liberal Arts (19-24 credits)

* The ECE program has been granted waivers for two General Education requirements from categories 4-9.

** Technical Elective: Any 3 or 4 credit hour ECE course number 300 or higher.

*** Professional Elective (PRO1/PRO2+): Any 300-level or better math course, labs, science, engineering course or faculty-approved special choice (management, accounting, etc...)

---

Electrical and Computer Engineering

The Electrical and Computer Engineering program is currently seeking ABET accreditation. Until the program is accredited, graduates are not eligible to receive maximum education/experience credits as a “professional engineering program” towards New York State licensure in professional engineering. ABET does not allow programs to apply for accreditation until they have graduated at least one student. ABET does allow the accreditation to cover students who graduated in the year before the accreditation is granted. See [www.abet.org/new_program.shtml](http://www.abet.org/new_program.shtml) for more information about the ABET accreditation process.

125 Total Credits
Bachelor of Science in
Electrical Engineering Technology

In today’s world, the great majority of all products, systems, and services include electrical or electronic aspects. Teams of trained people are needed to conceive, design, develop, and produce new answers to modern technical problems. The roles of the team members may vary, but the electrical engineering technologist generally uses the hands-on, application-oriented approach. Although technologists have knowledge of theoretical issues, they tend to focus on using current, state-of-the-art and emerging technologies to solve practical design and application problems.

Electrical engineering technology students can tailor their program to meet their needs by selecting specific technical electives to fill individual interests or career plans. The areas of concentration are:

- Communication Systems
- Control Systems
- Microprocessors & Digital Systems

Electrical Engineering Technology is accredited by the Technology Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 - telephone: (410) 347-7700. In January 2005, the American Society for Engineering Educators (ASEE) ranked SUNYIT tenth in the nation based on the number of engineering technology bachelor’s degrees awarded.

Laboratories

The Engineering Technologies Department has 10 laboratories dedicated to support of EET and CET laboratory courses, projects, and hands-on experience. Many of the labs are open beyond scheduled lab periods so students can investigate more extensively concepts developed in their courses.

Communications, Controls, Digital and Microprocessor labs are equipped with a variety of instrumentation described below. Much of the instrumentation in these labs is state-of-the-art equipment of the type that students will encounter in industrial settings, including meters, oscilloscopes, plotters, signal generators, frequency counters, spectrum analyzers, data and protocol analyzers, OTDRs, etc.

The department has established a multi-purpose EET lab equipped with sixteen stations. These computers are used for CAD, general purpose report writing using Microsoft Office and for support of EET, ECE and CET lab courses. Application software supporting a range of courses includes Electrical CAD software PCAD2007 for Schematic Capture and PCB layout, assemblers and general purpose tools such as Micro Sims Schematic and Psperience A/D and Basics, Circuit Analysis software, Electronics Workbench, and MATLAB by the MathWorks supporting Controls and Communications courses; and SILO software supporting digital design and OptSim, LAN Planner solo and MIDe software packages. The department continues to add applications software to provide easy access on these high performance computers for EET and CET coursework.

Controls: The control systems laboratory is equipped with EMMA II microprocessor control systems for speed and position control of dc/stepper motors. Six stations of in-house designed DC and Stepper Motor trainers have been added to the control system lab. The laboratory also has two Feedback Robot arm and PLC workcell conveyer. Siemens and Gould Modicon PLCs are also housed in this laboratory.

Communications: Labs are equipped with Microwave trainer systems, Mobile communication trainer, Doppler radar trainer systems, PC based analog and digital communication systems, wireless LAN, an FDDI LAN, HP protocol analyzers, spectrum analyzers, RF field strength analyzers and Emona communication modules for digital and wireless communications. An experimental lab running multi protocol network with TCP/IP is used for ETC416 and is equipped with a Cisco Router.

The fiber optics lab is equipped with optical time domain reflectometers (OTDR), fusion splicers, optoscope, power meters, optical spectral analyzers, couplers and Erbium doped fiber amplifier, light sources in addition to infrared viewers, cameras, coherent fiber optics, fiber optic telecommunication links and plastic and glass fibers. This lab is also equipped with various splicing, connectorizing, cleaving and polishing kits and tool accessories necessary to provide students with hands-on experience.

Digital: The digital systems design laboratories are fully equipped with equipment which can handle systems based on the Intel architecture. Microprocessor: Microprocessor laboratories supporting microprocessor courses include: EPROM and PLD programmers; 68HC12 microcontroller trainers; Micro-Chip PIC trainers and programmers; Tektronix 308 8-channel logic analyzers; Tektronix 338 32-channel logic analyzers and PC Windows based 40-channel logic analyzers.

Electrical Engineering Technology

Employers

SUNYIT’s EET graduates have been hired by hundreds of local and national companies and organizations across the spectrum of the field. Listed is a sampling of those companies.

B.S. Degree Requirements

To earn a Bachelor of Science (B.S.) degree in electrical engineering technology, a student must complete a minimum of 128 credit hours and fulfill the following requirements:

I. Arts & Science (60 credits)
   A. Liberal Arts
      Oral Communications
      Written Communications
      Upper-Division Writing
      Humanities*
      Social Science*
      American History*
      Western Civilization*
      Non-Western Civilization*
      Fine Arts*
      Foreign Language*
      *Complete at least five out of the above seven categories.

B. Mathematics and Science (24 credits)
   Physics (lab) & Basic Science (lab)
   (Biology, Chemistry, Physics, or Environmental Science)
   Mathematics, including the following:
   Differential Calculus (MAT 121)
   Integral Calculus (MAT 122)
   Differential Equations (MAT 230)
   Math/Science Elective (Balance of 24 credits)

C. Computer Programming Language (2 credits)

D. Liberal Arts, Math and Science, C.S. Electives (10 credits)

II. Technical Courses (54 credits)
   QC and Workplace Issues (ETC 299) 2
   Control Systems/Communications 4
   Digital Systems/Microprocessors 4
   Senior Level courses (ETC 4xx courses) 8
   Capstone Course (ETC 423, 435, 445, or 483) 4
   Technical Elective (ETC courses) 32

III. Unrestricted Electives (Balance of 128 credits)

Total Credits 128

EET students who have an EET associate’s degree may not enroll for credit in ETC 101, 102, 103, 203, 210, or equivalent.

A residency of 24 hours in the major is required to graduate.

Areas of Concentration†

Communications
ETC 316 Communication Transmission Techniques
ETC 391 Fiber Optics
ETC 416 Data Communications & Computer Network Technology
ETC 419 Satellite Communication
ETC 421 Wireless Communication Systems
ETC 475 Data Compression and Multimedia Technology
ETC 483 Optical Communications
ETC 490 Special Topics: Communication Techniques
ETC 437 Digital Filters

Control Systems
ETC 331 Control Systems
ETC 356 Programmable Controllers
ETC 433 Automatic Control Systems
ETC 435 Digital Control and Robotics

Microprocessors
ETC 265 Digital Systems II
ETC 342 Microprocessor and Embedded Systems Programming and Design
ETC 423 Microprocessor Interfacing
ETC 429 Microprocessor/Microprogramming & Computer Architecture
ETC 444 Special Topics: Digital/Microprocessors
Recent Topics: RISC Processors, IBM PC Assembly Programming
ETC 445 Microcontrollers
ETC 446 Programmable Logic Devices

Miscellaneous Electives
ETC 300 Tools in Technology
ETC 360 Advanced Circuit Analysis
ETC 391 Fiber Optics
ETC 455 VLSI Design
ETC 480 Electrical Technology Senior Project I
ETC 481 Electrical Technology Senior Project II
ETC 491 Independent Study
ETC 494 Co-Op

† Students are not required to complete a concentration.
Bachelor of Professional Studies/Bachelor of Science in Health Information Management

Health information management (HIM) is the practice of acquiring, analyzing, and protecting digital and traditional medical information vital to providing quality patient care. Health information management professionals work in a variety of different settings and job titles. They often serve in bridge roles, connecting clinical, operational, and administrative functions. These professionals affect the quality of patient information and patient care at every touch point in the healthcare delivery cycle. Having skilled HIM professionals on staff ensures an organization has the right information on hand when and where it is needed while maintaining the highest standards of data integrity, confidentiality, and security. HIM professionals are highly trained in the latest information management technology applications and understand the workflow in any healthcare provider organization from large hospital systems to the private physician practice. They are vital to the daily operations management of health information and electronic health records. For more information about the field, see: http://www.hicareers.com/Health_Information_101/Health_Information_101.aspx

Graduates of the SUNYIT health information management program and students in their last semester are eligible to write the registered health information administrator (RHIA) examination of the American Health Information Management Association.

Accreditation

The program is accredited by the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM). For more information, please see http://www.cahiim.org.

Virtual Laboratory (V-lab)

The program subscribes to the virtual laboratory (V-lab) of the American Health Information Management Association. This is an Internet-based laboratory so it can be accessed anywhere the Internet is available. This allows students to practice with a wide variety of current software applications used in the health information management field. Both students and the college pay a subscription fee to use the v-lab. At the time of this publication, the student fee is $60.00/one semester, or $85.00/academic year. Students should realize that the fees may change during the course of their degree programs.

Degree Options

Two degrees are offered in the health information management program:

Bachelor of Professional Studies (B.P.S)
Bachelor of Science (B.S.)

The Bachelor of Science degree program is open to freshman-level students as well as transfer students. The Bachelor of Professional Studies degree is open to transfer students only. Both degrees require the completion of 124 semester credits.

Transfer Credit

Graduates of two-year health information technology programs usually choose the B.P.S. degree option. In this degree program, students can enter with two years of transfer credit. Students can anticipate completion of the degree program in four semesters of full-time study. Transfer credit is given for prior course work in health information technology. Graduates of other two-year technical programs also usually choose the B.P.S. degree option. Transfer credit is given for prior course work that is applicable to the major. Transfer students from two-year liberal arts programs usually choose the B.S. degree option. Transfer credit is given for prior course work that is applicable to the major. Each applicant’s transfer credit is evaluated individually.

Recommended pre-requisites for the program for transfer students include introductory courses in statistics and accounting, and a one-year laboratory sequence in human anatomy and physiology.

Professional Practice Experiences (PPE)

Each student in the program completes three professional practice experiences (PPEs)*.

The first PPE (3 credits) is completed between the junior year and the senior year. This is normally a summer course and students should be prepared to pay summer tuition/fees. In this PPE, the student spends three weeks full time in a hospital health information department. The PPE provides the student with the opportunity to gain practical experience in the technical aspects of health information management.

The second PPE (1 credit) is completed in ten (10) half days during the fall semester of the senior year. This residency exposes students to various non-hospital settings.

The third PPE (3 credits) is taken for three weeks during the last semester of the senior year. It takes place in the health information services area of a healthcare or health-related organization. This PPE focuses on management aspects.

Additional expenses may be incurred during the PPEs for transportation, housing, health testing and proper work attire. Every effort is made to place students in organizations that are within reasonable commuting distance of SUNYIT or the student’s hometown. The decision regarding the proper placement of the student is made by the program faculty.

* Note: Transfer students with associate degrees in health information technology may transfer the equivalent of the first technical-level PPE and the second specialty rotation PPE.
Minimum Average Required in Major

Health information management students are required to maintain a minimum 2.0 grade point average in the HIM major courses in order to qualify for graduation. These courses are listed under department requirements in the degree programs.

Online Learning

Professional courses are available online. The program uses the State University of New York (SUNY) Learning Network for this purpose. Full-time, on-campus students will be required to take some of their courses online. On-campus HIM courses use an online supplement to the classroom environment. Distance-learning students may also participate in these on-campus courses via the Internet. Some of the general education and the other arts and sciences courses are available online. If a student needs courses in those areas and if SUNYIT does not offer them online, students may petition to bring in the courses from another college.

American Health Information Management Association (AHIMA) Membership

Students are asked to join the AHIMA so they can take advantage of member-only benefits. The benefits include access to an online library with full-text articles, discounts on books that are required for many of the courses, and a discount on the registered health information administrator (RHIA) national certification examination. Students will also receive the professional journal and emailed newsletters. At the time of this publication, the student membership rate is $35.00/year. Students should realize that the fees may change during the course of their degree program.

Employment

Health care facilities employ most health information managers. These facilities include hospitals, ambulatory care, long term care, home health care, mental health care, and hospices to name a few. Employment is also available with insurance companies, software vendors, service vendors, educational institutions, government agencies, and pharmaceutical companies. Health information managers can work anywhere health data is used.

Examples of some local employers of program graduates are:

Faxton St. Luke’s Healthcare - Utica
St. Elizabeth Medical Center - Utica
Rome Memorial Hospital - Rome
University Hospital, SUNY Upstate Medical University - Syracuse
Oneida Healthcare - Oneida
Slocum Dickson Medical Group - New Hartford
Onondaga Community College - Syracuse
Medical Coding Services, Inc., - Baldwinsville

Graduates are also employed in other prestigious organizations such as the National Institutes of Health Clinical Center in Bethesda, MD and the New York State Department of Health in Albany.

Typical job titles include:

Director Health Information Management
Associate or Assistant Director Health Information Management
Data Quality Manager
Data Quality Specialist
Coding Specialist
Cancer Registrar

Graduate school opportunities are available in both health information management and health informatics. Some graduates also enter programs for Master of Business Administration (MBA) or other business-related areas.
B.S. Degree Requirements†
Health information management students are required to maintain a minimum 2.0 grade point average in the HIM major courses in order to qualify for graduation. These courses are listed under department requirements in the degree programs.

I. Arts and Sciences General Education (30 credits)
Mathematics (Statistics)
Science: Human Anatomy and Physiology I (lab)
Science: Human Anatomy and Physiology II (lab)
Social Science
American History*
Western Civilization*
Other Civilization*
Humanities*
Arts*
Language*
Freshman Composition
Upper-division writing
*Select three out of the six courses

II. Arts and Sciences (additional) (31 credits)
Oral Communication 3-4
Spreadsheets 1
Word Processing 1
Electives 25-26

III. Department Requirements (63 credits)
HIM 100 Introduction to the Health Information Management Field
HIM 111 Medical Terminology
HIM 212 Pathophysiology for Health Information Management
HIM 220 Data Management and Analysis for Health Information
HIM 305 Inpatient Coding and Classification
HIM 306 Outpatient Coding and Classification
HIM 392 Professional Practice Experience I - Technical Management Systems
HIM 400 Non Hospital Health Information Management Systems
HIM 401 Systems for the Evaluation and Improvement of Health Care
HIM 410 Health Information Services Management
HIM 425 Research in Health Information Management
HIM 435 Health Care Management/Medical Information Systems
HIM 440 Electronic Health Records
HIM 493 Senior Seminar
HIM 494 Professional Practice Experience II – Specialty Rotation
HIM 495 Professional Practice Experience III – Management
HSM 309 Health Care and the Law
HSM 311 Mgt. for the Health Professions
ACC 201 Introductory Accounting
HSM 435 Financial Management for Health Care Organizations
HSM 491 Epidemiology
MG 318 Human Resources Management

†Open to freshman-level students and transfer students

IV. Unrestricted Electives (21 credits)

**Open to transfer students only.

Total Credits 124
Bachelor of Arts in
Interdisciplinary Studies

The B.A. in Interdisciplinary Studies offers students the opportunity to pursue an individualized curriculum that integrates focused study in a specific field with an interdisciplinary perspective that explores the relationships between technology, culture, and society. Our program is designed for students who are interested in a rigorous and flexible course of study that prepares them with both the breadth and depth of knowledge to apply their chosen area of specialization to the range of opportunities afforded by our rapidly changing modern society.

Our Mission

Our mission is to engage in critical inquiry into the relationships among culture, society, and technology and to understand how these interactions shape the world in which we live. We strive to do so in a manner that is humanistic in orientation, interdisciplinary in breadth, historical and cross-cultural in scope, and integrative in vision.

We adopt this perspective because we believe that a complex and interconnected world is best understood not from a single point of view but through interdisciplinary inquiry that can explore and integrate knowledge from different fields. We also believe that in a dynamic and fast-changing society, flexibility and adaptability are as important for success and innovation as specialization.

The B.A. in Interdisciplinary Studies prepares students for a diverse range of educational, professional, and occupational goals, including graduate study, law school, teacher education, and careers in the public and private sectors in which possessing a wide range of knowledge and skills is an asset. By encouraging students to individualize their program of study, we enable them to identify, explore, and develop their own intellectual and professional interests and, by gaining a deeper understanding of the social, cultural, and historical contexts in which they live, to creatively engage and take advantage of the opportunities presented by our modern world.

Overview of the IDS Program of Study

The program of study for the B.A. in Interdisciplinary Studies consists of three components: an Area of Concentration, the Interdisciplinary Studies Program Core, and the Capstone Sequence.

I. Area of Concentration (20-28 credits)

Students in the program gain depth of knowledge in a specific field by choosing an area of concentration and completing 20-28 credits of coursework in that field. The area of concentration allows students to specialize in a discipline or area that reflects their own educational and professional goals, and can be selected from among any of the majors, minors, or concentrations offered at SUNYIT. Students with specialized curricular interests, such as those planning to apply to graduate programs in fields such as law, education, and library science, may design an integrated area of concentration that will best prepare them for achieving their goals.

II. Interdisciplinary Studies Program Core (24 credits)

The Interdisciplinary Studies Program Core provides students with the breadth of knowledge and the critical, analytical, and communication skills needed to situate and apply their individual concentrations within a larger intellectual, social, and cultural context. The IDS Core is built around three interdisciplinary Areas of Inquiry that prompt students to think about, analyze, and understand the complex, interrelated world in which we live.

III. Capstone Sequence (8 credits)

The culmination of the program is a two-course capstone sequence in which students demonstrate mastery of their Area of Concentration and its integration with the IDS program core. Students are encouraged to design projects that prepare them to achieve their next goal, whether academic or professional.

In addition to demonstrating their knowledge and skills through their capstone projects, students may also take up to 4 credits of internships to gain additional experience in their chosen area of specialization.

Degree Requirements Overview

To earn a Bachelor of Arts (B.A.) degree in Interdisciplinary Studies a student must fulfill the following:

- Satisfactory completion of 124 credit-hours of college level work as specified below
- Satisfactory completion of a minimum of 45 credit-hours of upper-division work of which 30 credit-hours must be taken at SUNYIT
- Achievement of a minimum cumulative GPA of 2.0 in courses taken at SUNYIT
- A grade of C or better in all courses in the IDS Program (core courses, methods, capstone, and area of concentration)
- A grade of C or better in COM 308 or an approved alternative
- A maximum of 30 credits in professional and technical (i.e. non-Arts and Sciences) courses
B.A. Degree Requirements

I. General Education Requirements (38-48 Credits)

Students must complete a minimum of 30 credits in the ten SUNY General Education Requirement silos. In addition, students must satisfy SUNYIT requirements by completing the Laboratory Science and Upper Division Writing requirements.

SUNYIT General Education Requirements

| Laboratory Science | 4   |
| Upper Division Writing (CCM 308 or approved alternative) | 4   |

II. Interdisciplinary Studies Program Requirements

i. Area of Concentration (20-28 credits)

Students must complete 20-28 credits, depending on the option selected, in an Area of Concentration chosen by the student.

Option A Area of Concentration (20 credits)

Students must complete 20 credits in an Area of Concentration from among any of the program majors, minors, or program concentrations offered at SUNYIT, as well as from some additional fields. Students are required to demonstrate that they have attained depth of knowledge in their area of concentration by taking a minimum of 8 credits at the 300/400 level.

Option B Area of Concentration (28 credits)

Students with specialized curricular interests may opt to design a 28 credit individualized program of study, to be developed in consultation with their faculty advisor and approved by the Interdisciplinary Studies faculty. Students must take a minimum of 12 credits at the 300/400 level.

ii. Interdisciplinary Studies Program Core (24 credits)

Students must complete 8 credits in each of the three Areas of Inquiry that define the IDS Program Core, with a minimum of 4 credits in each Area of Inquiry completed at the 300/400 level. Students must complete at least one course in each Area of Inquiry carrying the Critical Studies in Technology (CST) designation.

A. Histories and Systems of Thought:

Explores the development and significance of major intellectual and cultural themes that shape the way we think about the world. Themes include the development and influence of technological ways of thinking and systems of thought.

IDS 201: Perspectives on Knowledge
IDS 204: Understanding Human Nature
IDS 400: Prominent Themes in Western Civilization Since the Renaissance (CST)

B. Social and Political Contexts:

Examines the interrelationships between social and political contexts and social practices: i.e. how social and political contexts shape social practices, and how social, political, and technical practices articulate, express, and shape (and challenge, resist, and reconfigure) social relations, including relations of power. Includes the examination of how technologies articulate socio-political practices, and how technological developments shape and reshape the contexts of social practice.

IDS 103: Science, Technology, and Human Values (CST)
IDS 203: Introduction to Science, Technology, and Society (CST)
IDS 304: Technology in American History (CST)
HIS 375: Gender Issues in World History

C. Cultural Analysis and Interpretation:

Examines forms and modes of cultural expression and develops the analytical and interpretive practices for building a critical understanding of the cultural environment, the ways in which cultural objects articulate social and historical contexts, and the ways in which cultural practices shape subjectivity and social relations. Includes the study of how technologies shape representational and cultural practices, and the critical analysis and interpretation of representations of technology.

IDS 102: Art and Culture
IDS 301: Monsters, Robots, Cyborgs (CST)
IDS 302: Postmodernism and Popular Culture (CST)
IDS 435: Art and Technology (CST)

iii. Capstone Sequence (8 credits)

Students must demonstrate skills in research and critical inquiry, together with mastery and integration of their chosen area of concentration with the IDS Core, by completing the methods and capstone project course.

IDS 410: Research and Critical Methods
IDS 499: Interdisciplinary Studies Project

III. Electives (16-34 credits)

Students must complete the balance of the 124 required credits in college-level courses in any discipline carrying SUNYIT or transferable credit.
Bachelor of Science in Mechanical Engineering Technology

The goals of the Mechanical Engineering Technology (MET) program are to provide quality undergraduate studies, prepare students to enter professional careers and graduate study, and find employment in their field after graduation. This program values and encourages academic and intellectual achievement of the highest quality and the technical competencies inherent to the field of MET. The faculty are committed to the integration of these elements in a coherent program of higher education.

MET graduates are problem solvers with hands-on skills and a well-rounded technical background. They work in a wide range of advanced mechanical systems and processes. Job functions include design and development, installation, maintenance, documentation, manufacturing, fabricating, testing and evaluation, and technical sales. Typical starting jobs for MET graduates include product development and design, computer-aided design and manufacturing, and technical management and supervision. Graduates of this program pursue careers not only in MET, but also in related fields such as computer science and industrial, manufacturing, and civil engineering.

Students take a series of required courses to obtain technical expertise in the fundamental areas of mechanical engineering technology. Technical expertise with added technical depth is required in each of the following three areas:

1. Mechanical Design
2. Thermal Sciences

Mechanical Engineering Technology is accredited by the Technology Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 - telephone: (410) 347-7700. In January 2005, the American Society for Engineering Educators (ASEE) ranked SUNYIT tenth in the nation based on the number of engineering technology bachelor’s degrees awarded.

Mechanical Laboratories

The MET program has numerous laboratories with equipment to provide hands-on application of classroom learning. These laboratories encompass many aspects of the MET curriculum, including:

- Instron multi-purpose testing machine
- Bending moment and deflection of beams apparatus
- Electronic strain measurement equipment
- Static equilibrium devices
- Dynamics test stands: centrifugal force, ballistic projectiles, linear momentum, conservation of potential energy, acceleration, forces of gravity
- Machine shop for prototyping
- Computer Numeric Control (CNC), CNC machining center, CNC turret lathe
- Rapid prototyping
- Heat exchangers - conduction, convection, and radiation heat transfer units
- Heat pipes and pumps, solar energy systems
- Subsonic wind tunnels, reaction and impulse turbines
- Mechanical measurements lab with a wide range of electro-mechanical sensors and data acquisition electronics

Electrical course requirements also include dedicated laboratories with electronic equipment.

Computer Skills

This curriculum provides students experience with modern software and hardware that is used in industry. Some of the advanced courses are taught using software such as:

- AutoCAD for mechanical design and layout
- AutoDesk Inventor Professional
- ALGOR for finite element analysis
- LabVIEW for mechanical measurements
- MATLAB/SimuLink for simulation
- ProENGINEER for solid modeling and analysis
- SolidWorks for rapid prototyping

The MET program has several dedicated computer labs, and students have access to numerous other modern computer labs throughout the campus. For the computer language requirement, students may learn C/C++, JAVA, and Visual Basic.

Student Clubs

MET students may join chapters of the following professional societies:

- ASME American Society of Mechanical Engineers
- SAE Society of Automotive Engineers
- SME Society of Manufacturing Engineers
- SWE Society for Woman Engineers
- ASQ American Society for Quality

Recent activities of these clubs include the SAE Baja project, where students design and build a single-passenger off-road vehicle for the international race and design competitions. Members of the ASME club have also participated in regional and international design competitions.
Mechanical Engineering Technology

B.S. Degree Requirements

To earn a Bachelor of Science (B.S.) degree in MET, a student must complete a minimum of 128 credits hours and fulfill the following requirements:

I. Arts and Sciences (60 credits)

A. Liberal Arts
   Oral Communication
   Written Communication (ENG 101 or equivalent)
   Upper-Division Writing
   Humanities*
   Social Sciences*
   American History*
   Western Civilization*
   Other World Civilizations*
   Fine Arts*
   Foreign Language*

*Complete at least 5 of the above 7 categories

B. Mathematics and Science
   Physics (with laboratory)**
   Chemistry (with laboratory)**
   Physics elective**
   Mathematics (including Calculus I & II, Differential Equations)

**Students are encouraged to take calculus-based sciences

C. Computer Programming Language
   CSC 310, 301J, 317, or upper-division programming language

D. Electives
   Liberal Arts, Math, Science (Balance of 60 credits)

II. Technical Courses (66 credits)

A grade of “C” or better in at least 4 credits from each of the following groups at SUNYIT:

A. Required Courses
   A grade of “C” or better in each of the following courses:
   MTC 101 Intro to Engineering Technology
   MTC 136 Material Science Applications
   MTC 162 Computer-Aided Design
   MTC 211 Manufacturing Processes
   MTC 218 Statics
   MTC 222 Strength of Materials
   MTC 301 Professionalism in the Workplace
   MTC 352 Thermodynamics
   MTC 430 Engineering Dynamics
   MTC 461 Fluid Mechanics
   MTC 420 Capstone Experience*

*Taken during senior year at SUNYIT

B. Courses with Technical Depth
   A grade of “C” or better in at least 4 credits from each of the following groups at SUNYIT:

   Group 1: Mechanical Design
   MTC 308 Mechanical Components
   MTC 362 Experimental Stress Analysis
   MTC 363 Mechanisms Analysis & Design

   Group 2: Thermal Sciences
   MTC 450 Solar Energy Concepts
   MTC 454 Engineering Heat Transfer
   MTC 462 Turbomachinery

   Group 3: Computer-Aided Engineering Graphics
   MTC 388 Solid Modeling with Pro/E
   MTC 405 Solid Modeling & Rapid Prototyping
   MTC 476 Finite Element Applications

C. Mechanical Electives
   Students must take at least 10 credits at SUNYIT.

D. Electrical Elective
   (ETC 102, Electric Circuits, or equivalent)

III. Open Electives (Balance of 128 credits)

128 Total Credits

Areas of Concentration†

Mechanical Design
   MTC 308 Mechanical Components
   MTC 336 Material Science Applications
   MTC 363 Mechanisms Analysis & Design
   MTC 388 Solid Modeling, ProEngineer
   MTC 398 Mechanical Measurements
   MTC 430 Engineering Dynamics
   MTC 464 Vibrations Analysis
   MTC 465 Advanced Machine Design

Thermal Sciences
   MTC 210 Heating, Ventilating, & Air Conditioning
   MTC 350 Solar Energy Technology
   MTC 352 Thermodynamics
   MTC 450 Solar Energy Concepts

   MTC 467 Computer-Aided Design
   MTC 476 Finite Element Applications

Energy Systems
   MTC 210 Heating, Ventilating, & Air Conditioning
   MTC 215 Sustainable Energy Systems
   MTC 220 Hydrogen & Fuel Cell Technology
   MTC 350 Solar Energy Technology
   MTC 352 Thermodynamics
   MTC 450 Solar Energy Concepts
   MTC 454 Engineering Heat Transfer
   MTC 466 Wind Turbines

†Students are not required to complete a concentration.
**Bachelor of Science in Network & Computer Security**

Cyber Security professionals are in high demand throughout industry and government sectors. SUNYIT's Network and Computer Security (NCS) program provides graduates with a thorough understanding of the technologies used to provide and secure modern network and computing infrastructures. Core courses provide a firm background in information security principles, data communications networks, and computer system security, while the wide range of electives enables a customized program to be developed.

**Typical job titles in information security:**
- Information Assurance/Security Specialist
- Security Analyst
- Security Researcher
- Security Engineer
- Software Security Analyst
- Network Security Engineer
- Information Security and Risk Specialist
- Principle Security Analyst

**Computer Labs**

Six computing and networking labs support the programs in Network and Computer Security, Telecommunications and Computer Science. These labs include Windows machines, UNIX machines, and networking equipment for student use. Multiple file servers enable central data storage that is accessible both on and off campus. These labs are maintained by full time staff with the assistance of student administrators.

**B.S. Degree Requirements Overview**

To earn a Bachelor of Science (BS) degree in Network and Computer Security, a student must complete a minimum of 124 credit hours and maintain a minimum GPA of 2.5 in their professional coursework. The coursework specified in section I below satisfies the 30 credit minimum for SUNY General Education requirements. In fulfilling the balance of 124 credits with open electives, students must ensure at least 60 credits of coursework for the degree is classified as Arts and Sciences.

**Accelerated BS/MS program Network and Computer Security and Telecommunications**

The joint BS/MS program is a well-integrated program that permits students to complete both a bachelor’s degree in Network and Computer Security and a master’s degree in Telecommunications in a reduced timeframe with a reduced number of total credits.

**Requirements**

Completion of the joint BS/MS program requires a minimum of 145 credit hours, including a minimum of 33 semester hours of graduate study. All specific requirements for both the BS and the MS degrees must be met. Students in the joint program may apply up to twelve credits of graduate coursework to both the undergraduate and graduate degrees simultaneously. The double-counted coursework will be chosen from the Core Electives in the graduate program, and applied as Advanced Technical Electives in the undergraduate program. The intent of this program option is to allow well-prepared students to finish both a bachelor’s and master’s degree within a 5 year period.

**Status**

A student enrolled in the joint BS/MS program will be considered to remain in undergraduate status until the completion of 124 semester hours, and thereafter tuition and fees will be charged at the graduate level. The BS degree will be awarded at such time as all the requirements for that degree are satisfactorily met. Students are expected to complete their BS program requirements prior to pursuit of the MS degree except where those two programs overlap.

**Academic Standing**

Admission to and continued matriculation in the joint BS/MS program requires maintenance of a GPA of 3.0 for courses taken at SUNYIT in each of the following categories: (a) all courses applicable to the undergraduate degree; (b) Network and Computer Security courses applicable to the undergraduate degree; (c) all graduate courses. Students with a GPA of 2.75 to 2.99 in any of these categories will be placed on academic probation in the program. Students who are on academic probation for any two semesters or who have a GPA of less than 2.50 in any of these categories will be academically dismissed from the joint program. Students who are academically dismissed but have not yet completed the baccalaureate program but whose performance is satisfactory in the undergraduate program will automatically be placed in that program.
Admission to the BS/MS Program

Admission to the BS/MS program may be achieved, and enrollment maintained, in one of the following ways:

A) As an entering freshman: continued enrollment in the joint program requires achievement of grades of B or better in all Network and Computer Security coursework and in calculus. In addition, students must have an overall GPA of at least 3.0 at the end of the semester in which the first 60 credits have been completed.

B) Upon initial transfer to SUNYIT: students must have earned grades of B or better in courses that receive transfer credit as Network and Computer Security course equivalents, and calculus. The student must have a transfer GPA of at least 3.0.

C) Subsequent to initial enrollment at SUNYIT: students must receive grades of B or better in all Professional Coursework (or their transfer equivalents), have an overall GPA of at least 3.0 for all courses taken at SUNYIT, and have a GPA of at least 3.2 for courses in their major.

Students entering the joint BS/MS program must not have completed more than 94 credit hours toward their Bachelor’s degree, and must be able to complete all requirements for the Bachelor’s degree within the first 124 credit hours earned.

B.S. Degree Requirements

I. General Education Requirements

A. Liberal Arts
   Oral/Speech Comm. COM 300
   Upper Division Writing
   Social Science
   American History
   Western Civilization
   Other World Civilizations
   Humanities
   The Arts
   Foreign Language
   Basic Communication

B. Mathematics and Science
   PHY 101 Physics I
   PHY 102 Physics II
   MAT 112/151 Calculus
   STA 100/225 Statistics
   MAT 115/413 Finite/Discrete Math

II. Professional Coursework

A. Core Courses
   NCS 181 Introduction to Cybersecurity
   NCS 210 Network Transmission Tech.
   CS 108 Computing Fundamentals

B. Intermediate Coursework
   CS 307 UNIX Programming Environment
   IS 310 Hardware and Network Infrastructure
   IS 315 Networking and Information Systems
   NCS 320 Information Assurance Fundamentals
   NCS 330 Information Assurance Ethics, Policies and Disaster Recovery
   NCS 350 Wireless Systems and Security

C. Advanced Electives
   Minimum 12 credits, must include 2 NCS courses
   NCS 316 Data Network Design
   NCS 383 Network Firewalls
   NCS 384 Network Intrusion Detection
   NCS 416 Digital and Internet Telephony
   NCS 425 Internetworking
   NCS 435 Computer and Network Forensics
   NCS 450 Network Security
   NCS 460 Advanced Wireless Security
   NCS 490 Special Topics in Network and Computer Security
   NCS 494 Network and Computer Security Internship
   CS 370* Software Engineering
   CS 381* Computer Security and Cryptography
   CS 407* UNIX System Administration
   CS 441* Computer Systems Architecture
   CS 445* UNIX Network Programming
   CS 454* System Simulation
   CS 477* Algorithms
   IS 340* E-Commerce
   IS 470* Database Programming
   Courses marked with * have CS course prerequisites beyond Cybersecurity degree requirements.

D. Capstone
   NCS 495 Network and Computer Security Capstone

III. Unrestricted Electives (Balance of 124 credits)
   Additional coursework as required to total 124 credits.
   124 Total Credits
Bachelor of Science in Nursing

Improving the nation’s health in the twenty-first century requires increasing the variety of care delivery settings available to the general population. Professional nurses of tomorrow must be prepared today to meet the challenges of highly complex health care needs and services for people of our communities and globally. The curricular emphases in baccalaureate nursing programs on health promotion and healthy behaviors, coordinating cost-effective quality care, community-focused health care, and the evidence-based practice, are particularly appropriate to achieving the future’s agenda. It is estimated, however, that the next decade’s demand for baccalaureate-prepared nurses will continue to exceed their availability.

Mission

The mission of the Department of Nursing and Health Professions is to provide a nursing education at the baccalaureate and master’s levels that focuses on collaboration, active participation in one’s own learning, critical reflection, and creative practice to meet the needs of clients across the lifespan. Nursing education is built upon a general education of the arts and sciences that complements professional education in: nursing knowledge and theory; inquiry and research; leadership and community; nursing standards and professional practice.

Vision Statement

The faculty aspire to professional excellence in teaching, practice, scholarship, and service to SUNYIT and the communities of Central and Upstate New York. Our vision is to be a community of nurse scholars and mentors guiding professional nurses as nurse leaders and advanced practitioners who are committed to professional ideals, lifelong learning, and meaningful practice within increasingly technological health care systems and communities.

Goals

1. Integrate nursing knowledge with a blend of liberal education in the arts and sciences.
2. Provide an educational environment that promotes caring, critical reflection, collaboration, professionalism, and lifelong learning.
3. Mentor and guide nurses toward personal and professional transformation in nursing.
4. Foster clinical decisions and ethical practice in health care based upon the codes and standards of practice to meet unique needs of individuals, families, and communities.
5. Promote the development of faculty in teaching, practice, community service, and scholarship within the nursing profession, community, and university.

Program Outcomes

At the completion of the baccalaureate program, the graduate will be able to:

1. Synthesize theoretical and empirical knowledge in nursing and from related arts, natural, social, and behavioral sciences essential for professional practice.
2. Apply theories of caring, teaching and learning, wellness, health promotion, leadership, and management to meet health care needs of individuals, families, groups, and culturally diverse communities.
3. Integrate concepts of critical reflection, collaboration, community, and research to foster independent judgment and decision making in one’s practice.
4. Embrace the code of ethics and standards of nursing practice in the provision of care and professional performance.
5. Collaborate with consumers, providers, and organizations to provide meaningful health services for others.
6. Demonstrate commitment to ongoing personal and professional development through professional involvement, and lifelong learning.

Accreditation

The undergraduate and graduate nursing programs are registered by the New York State Education Department and accredited by the Commission on Collegiate Nursing Education (CCNE, 1 Dupont Circle NW, Washington, DC, 202-887-6791). The CCNE is recognized by the U.S. Department of Education as an accrediting agency for nursing programs at both the baccalaureate and graduate levels. For more information, see: http://www.aacn.nche.edu/accreditation/

Programs

• RN to BS Nursing Program

SUNYIT offers a curriculum leading to a Bachelor of Science degree with a major in nursing. The baccalaureate program is designed to serve licensed registered nurses from state-approved associate or diploma nursing programs who are prepared to focus on their professional and career development.

Students may attend the SUNYIT program on campus, on a full-time or part-time basis. Courses are also offered at outreach sites in the capital district, the Kingston area, and for select cohorts in the north country. Course offerings at these outreach locations are scheduled within a select time frame and are delivered by our nursing faculty, with courses offered through traditional classroom teaching and web enhanced/hybrid distance education. Complete details regarding scheduling of nursing courses are available upon request from the nursing outreach coordinator (315 792-7297).

The nursing program, in support of the mission of SUNYIT, offers direct articulation and joint admission agreements with associate degree and diploma nursing programs. These agreements provide potential students advanced advisement regarding transfer of credits.

The curriculum includes coursework in the theoretical bases of professional nursing practice, comprehensive health assessment, nursing research and evidence based practice, nursing leadership, and public health nursing science.

As with all programs at SUNYIT, the nursing program includes a strong base in the arts and sciences. This provides
students with the tools and knowledge to relate their experiences to their work and to the broader context of their lives. It helps create a more diverse, complete education that continues to grow through life long learning.

General Admission Information for BS Nursing

Transfer of Semester Hours
1. Students must submit to the director of admissions official transcripts of any college courses they wish to have evaluated for transfer of semester hours.
2. Only those semester hours acceptable toward meeting the curriculum requirements of the nursing program will be accepted for transfer; transfer credits are determined on an individual basis. At the lower division level, 30 semester hours in nursing and a maximum of 34 semester hours in arts and sciences can be transferred from an associate degree program.
3. Only courses with a minimum grade of “C” are considered for transfer as upper division transfer semester hours.

Academic Requirements
Before being admitted into the baccalaureate nursing courses at SUNYIT, a potential student must meet the following requirements:
1. Applicant must be a graduate of a state-approved associate degree or diploma nursing program.
2. After matriculation and completion of up to 64 lower division credits, students can transfer a maximum of twelve (12) credits that are not upper division coursework. Lower division coursework is classified as: all credit taken at two-year institutions and lower division credit as defined by a four-year institution. This 12 credit restriction refers to lower division coursework and credit by external examination (credit by examination is limited within this 12 credit restriction regardless of course level of exam). Students must receive prior approval by filing an academic petition in accordance with the procedures of the Department of Nursing and Health Professions Academic Standards Committee. These petitions must be filed through an advisor, with sufficient and specific justification and relevant information to support the student’s request.
3. Upper division level, non-nursing courses to be considered for transfer as upper division credit (30 semester hours maximum) must be passed with a minimum grade of “C”.
4. Prior to admission, each student is required to have a minimum of 26 lower division semester hours in arts and sciences courses, or equivalent, in English composition, anatomy, physiology, microbiology, introductory psychology, and introductory sociology.
5. Applicants who need to validate lower division arts and sciences credits may do so through Excelsior College or CLEP tests. CLEP tests may be scheduled at SUNYIT by contacting the Learning Center.
6. Students are required to pass an upper division writing course within the first 32 semester hours after matriculation at SUNYIT. Any student may be exempt from the required course if they successfully complete the test-out procedure established.

Program Policies
1. Prerequisites for participation in the clinical nursing courses (NUR 444, NUR 474) include:
   a. Licensure – A copy of the student’s current New York State R.N. Registration Certificate must be on file in the Department of Nursing and Health Professions.
   b. Health Clearance – Written evidence of the satisfactory completion of the health requirements for the Department of Nursing and Health Professions and health agencies must be on file in the Health and Wellness Center.
   c. CPR Certification – Written evidence of current satisfactory completion of CPR certification must be on file in the Department of Nursing and Health Professions.
   d. Matriculated status – fulfillment of all prerequisite and admission requirements.
2. Degree Requirements: the degree applicant must meet the requirements of the B.S. degree with a major in nursing and the general education requirements as determined at the time of admission.
3. Grading: The student must maintain a 2.0 cumulative grade point average (GPA) to remain in good standing. The student must obtain a minimum grade of “C” in each nursing course. The student must pass both the theoretical and clinical components of a nursing course, or the course must be repeated in its entirety. A student may repeat a nursing course only once. If a minimum grade of “C” is not obtained a second time, the student will be required to withdraw from the nursing program.
4. Withdrawal from Program: The Department of Nursing and Health Professions reserves the right to request the withdrawal of any student whose continuance in the program would be detrimental to the health and safety of self or others.
5. Add/Drop Courses: A student dropping corequisites of a nursing course will also be required to drop the applicable nursing course.
6. Academic Overload: A full-time student desiring to take more than 16 semester hours in either the fall or spring term must demonstrate the ability to carry an overload by achieving a 3.25 GPA while carrying 16 semester hours in the previous semester. Any overload must be approved in writing by the Chair of the Department of Nursing and Health Professions.
7. Readmission: Students seeking readmission to the Department of Nursing and Health Professions will have their coursework evaluated by the Academic Standards Committee of the Department of Nursing and Health Professions. Upper division nursing credits taken more than five years before admission will be evaluated for applicability to the student’s new program of study.

R.N. Licensure
A current New York (NY) Registered Nursing (RN) License is required upon completion of first semester coursework. Students who do not have a current NY State RN License by the end of the first semester may not take additional nursing courses until licensure is obtained.
Faculty
The faculty, with their broad and varied experiences and educational philosophies, are outstanding proponents of baccalaureate education for registered nurses. The faculty are highly qualified to assist the adult learner and guide both the new registered nurse and those with extensive and/or varied experiences through the program. Faculty serve as academic advisors to all students.

Online Course Access
The Department of Nursing and Health Professions offers selected courses online in addition to traditional classroom instruction. Some courses may only be offered online in a given semester requiring that the student have access to the internet through personal home computer or other access venues. SUNYIT computer laboratories offer access to students at multiple on-campus locations including the Department of Nursing and Health Professions Informatics Laboratory.

Nursing Facilities
The nursing program makes use of new and modern facilities, laboratories and equipment giving students the opportunity to learn from current research and developments. Laboratory equipment features an extensive learning library of audio-visual materials, computer software and complete health assessment laboratories with examination tables, full-scale anatomical models, diagnostic instruments and video monitoring. Students also make use of the latest equipment available in health care facilities where they apply classroom theory to practical situations. All students have access to the department’s computer laboratory, assessment labs and other venues throughout campus.

Clinical Application
Students test nursing principles in real-life situations at a wide variety of health care settings, including hospitals, schools, health care agencies, community based and public health focused programs. These clinical experiences are designed with working registered nurses in mind, allowing them to earn their degrees as conveniently as possible.

Health
All students must meet the health requirements of the nursing program and health agencies. Each student must be able to perform a full range of clinical activities. Satisfactory health clearance must be complete and on file in the Health and Wellness Center prior to participating in each of the clinical courses (NUR 444 and NUR 474). Health forms will require students to be free from physical or mental impairments, including habituation or addiction to depressants, stimulants, narcotics, alcohol, or other behavior-altering substances that might interfere with the performance of their duties or would impose a potential risk to patients or personnel. Attendance at clinical activity without prior clinical clearance will result in clinical failure.

Transportation and Professional Attire
All students must provide their own transportation for field trips, laboratory, and clinical assignments associated with their nursing courses. Professional attire and roles will be specified for each course by the clinical professor in collaboration with agency supervisors.

Sigma Theta Tau International
Sigma Theta Tau International is the Honor Society of Nursing. The Department of Nursing and Health Professions’ Iota Delta Chapter includes in its membership students, alumni, faculty, and community leaders in nursing. The purposes of this society are to recognize superior achievement and the development of leadership qualities to foster high professional standards, to encourage creative work, and to strengthen commitment to the ideals and purposes of the profession. Eligibility is determined by scholastic achievement, evidence of professional potential, and/or marked achievement in the field of nursing.

Joint Articulation Partnership
a 1 + 2 + 1 Program of Study
SUNYIT has a unique Joint Articulation Partnership with St. Elizabeth College of Nursing (SECON) for students who want to earn an A.A.S. degree and a B. S. degree with a major in Nursing. This partnership is designed for students to enroll in SUNYIT courses year 1, then matriculate to SECON years 2&3, sit for RN licensure at the successful completion of year 3, and then matriculate into the nursing program at SUNYIT to complete year 4 for a B.S. degree with a major in Nursing. This partnership is specially designed for the high school graduate interested in a nursing career. Please contact SUNYIT Admissions Office for further details and admission requirements to begin this program.

† Nursing requirement.
II. Nursing Requirements (62 credits)

NUR 313 Theoretical Bases for Professional Nursing Practice 4
NUR 314 Comprehensive Health Assessment 4
  Prerequisites: Human Anatomy & Physiology I & II, Microbiology; Pre/Corequisite: Bio 350
NUR 325 Epidemiology in Nursing 2
NUR 344 Ethical Issues in Nursing 2
NUR 390 Nursing Research 4
  Pre/Corequisites: NUR 313, Statistics
NUR 444 Nursing Leadership 4
  Prerequisites: Matriculated status, NUR 313, NUR 314, NUR 390, BIO 350, Cultural Anthropology, Developmental Psychology, current NY Registered Prof; Nurse license, current CPR certification, complete health clearance on file; Pre/Corequisites: NUR 344
NUR 455 Public Health Nursing Science I 4
  Prerequisites: NUR 313, NUR 314, NUR 325, NUR 390, BIO 350, Cultural Art, Dev Psy;
NUR 474 Public Health Nursing Science II 4
  Prerequisites: NUR 313, NUR 314, NUR 325, NUR 390, NUR 444, NUR 455, Cultural Anthropology, Developmental Psychology, current New York State Registered Professional Nurse license; current CPR certification, complete health clearance on file. Clinical clearance must be validated prior to first scheduled clinical agency experience. Attendance at clinical activity without prior clinical clearance will result in clinical failure; Pre/Corequisites: Sociology elective.
NUR 480 Special Topics in Nursing (or Nursing Elective*) 2
NUR 490 Culminating Seminar 2
  Pre/Co Requisites: NUR 474; Student must be within 4 credits of graduation at completion of culminating seminar.

* Nursing electives that can satisfy this requirement include NUR 377, 381, 382, 383, 384, 385, 386, 387, and 388.

124 Total Credits

• Accelerated BS/MS Programs for Professional Registered Nurses

This program offers qualified registered nurses the opportunity to earn both the BS and MS in Nursing within a shortened time frame. The curriculum combines elements of the BS program with the MS program and streamlines the BS program by substituting with select accelerated courses. Full-time study is preferred to proceed through the program at an accelerated pace. Students have the option of selecting from three graduate specialty areas of concentration: nursing administration, nursing education, or family nurse practitioner. At the end of the option, the graduate will be eligible to seek advanced practice certification. The RN to BS/MS student will receive both BS and MS degrees upon program completion.

In addition, students requesting admission to the Accelerated RN to BS/MS Program must meet the following requirements:

1. Hold an associate’s degree with a major in nursing from an accredited program, with a minimum 3.2 GPA (on a 4.0 scale) for the last 30 hours of undergraduate course work.
2. Be currently licensed as a Registered Professional Nurse in New York State.
3. Have completed the equivalent of one year of work experience in nursing.
4. Submit three (3) letters of recommendation from professional nurses; one (1) must come from faculty with whom the applicant had studied, and two (2) others from recent employers or any other individual who can provide evidence of the applicant’s past and potential contributions to the profession.
5. Discuss in writing precisely the applicant’s reasons for seeking admission to the BS/MS program, identifying immediate and long-term professional goals, and relating intended contributions to the professional field after completion of the master’s program.
6. Participate in a personal interview with a member of the nursing faculty.
7. Submit a professional portfolio containing samples of writing and any project development.

Degree Requirement Overview for Accelerated Programs:

1. Continued matriculation in the Accelerated RN to BS/MS programs requires maintenance of a GPA of 3.00 for all courses taken at SUNYIT.
2. A student must also maintain a GPA of 3.00 in all graduate nursing courses and may not have more than two (2) “C”s on record at the time of graduation.
3. Students may repeat a graduate nursing course only once.
4. Students with an average GPA of less than 3.00 will be placed on academic probation in the program. Students with less than a “B” (3.0) in graduate nursing courses will be placed on academic probation. Students who are on academic probation for any two semesters or who have a GPA of less than 2.50 will be academically dismissed from the Accelerated BS/MS program.
5. Students who are academically dismissed or choose not to complete the Accelerated BS/MS program, and whose performance constitutes satisfactory performance in the undergraduate program, will be placed in the baccalaureate RN to BS program. If these students have satisfactorily completed the accelerated courses in Nursing Theory (2cr), Nursing Research (2cr), and/or Nursing Leadership (1cr) a directed study will be available for those students to complete course requirements of the baccalaureate program of study. In addition, the exemptions from Special Topics in Nursing (2cr) and Culminating Seminar (2cr) will be invalid, and the student will be required to complete these courses for the baccalaureate degree requirement.
6. Each semester a required two-hour colloquium will be held for all students in the Accelerated RN to BS/MS nursing program. Colloquia will focus on content areas and issues unique to this specialized program. Self-paced learning modules which focus on creating power point presentations, using APA Publication Guidelines, and principles of teaching and learning will be available.
7. Up to 12 credits in select graduate nursing courses can simultaneously apply to the BS and MS degrees. See Department of Nursing & Health Professions for selection.
8. Students must complete all undergraduate courses and a total of 124 credits to be awarded a BS with a major in nursing.
9. Residence requirement is 57 hours; see school for transfer credits.
10. Graduate status begins at the 2nd fall term in the student’s program of study.
11. Upon completion of the accelerated program, both BS and MS degrees will be conferred.
12. For all NP programs, students must maintain a B grade in all course components of their didactic and clinical nurse practitioner courses.
13. For all NP programs, a comprehensive exam will be given.
Nursing

Accelerated RN to BS/MS with a Major in Nursing Administration

Students enrolled in the Accelerated BS/MS program with a Major in Nursing Administration can expect to complete the degree requirements within three years of full-time study after completion of an associate degree nursing program.

| Note: | Graduate status begins at the 2nd fall term in the program of study. |
Pre-Law Option

SUNYIT believes that students obtain the best preparation for law school by enrolling in challenging academic programs that provide rigorous study. This belief is supported by the Law School Admissions Council (LSAC), which recommends that a specialized pre-law curriculum is neither advisable nor advantageous for students who wish to attend law school. The LSAC suggests that students pursue academic programs that lead to disciplined habits of study and that provide students with strong reasoning and communication skills. Because no one curriculum provides better preparation than any other, we encourage students to select a major based on their interests and aptitudes.

Faculty are available to counsel students on course selection. SUNYIT provides a resource library and other pertinent materials to assist in the law school application process.

Students interested in attending law school after completing their baccalaureate degree studies should notify their academic advisor and Career Services.
Bachelor of Arts in Psychology

The program in psychology leads to a Bachelor of Arts (B.A.) degree. Psychology is the scientific study of individual and group behavior. The psychology program stresses theoretical understanding of the principles of psychology, as well as practical applications to the solution of human problems.

The program has three tracks: mental health, social-industrial psychology, and general experimental.

- **Mental Health Track:**
  - The mental health track is designed to provide students with a broad perspective on the adjustments, both healthy and unhealthy, to problems faced throughout the lifespan.
  - The courses cover specific issues in mental health, vocational and rehabilitation psychology and health psychology. Students will be exposed to models of health and illness, as well as to psychological assessment and treatment techniques.

- **Social-Industrial Track:**
  - The social-industrial track emphasizes the application of psychological principles to understanding human behavior.
  - The student in this track will receive training in diverse areas, such as psychological analysis of social issues, understanding and controlling aggression, personnel selection, leadership, and psychological testing.

- **General Experimental Psychology Track:**
  - The general experimental psychology track is designed to give students a broad background in scientific psychology. We cannot simply look within, or introspect, to understand the mind; the mind yields its secrets only to experiment.
  - The emphasis of this track will be on understanding how experimental evidence allows psychologists to uncover these hidden rules. The courses suggested for this track deal with the fundamental processes of the mind.

Graduates in psychology find employment in the areas of health, mental health, human services, social work, mental retardation, counseling, personnel administration, education, allied health fields and business. They also go on to graduate study or allied fields.

Psychology Club

There is also an active Psychology Club open to all psychology students. The club sponsors lectures and discussion on current topics in psychology, graduate schools and relevant employment. Alumni return frequently and describe their work or graduate school experiences.

Psychology Laboratory

Since psychology is an empirical discipline, the psychology program has a laboratory to support its research courses. The psychology laboratory has 20 experimental stations, each equipped with a desk-top computer to conduct experiments. The program also provides a laboratory with an observation room for clinical and social interaction courses. These laboratory facilities substantially enhance the quality of the psychology program and the scientific education of students enrolled in it.

Degree Requirements Overview

To earn a Bachelor of Arts (B.A.) degree in psychology, a student must fulfill the following requirements:

- Satisfactory completion of at least 124 semester hours of college-level work distributed as follows:
  - General Education Requirements 54 credits
  - Program Requirements 40 credits
  - General Electives 30 credits
  - **Total 124 credits**

- Satisfactory completion of at least 60 semester hours of upper division college work at least 30 of which must be taken at SUNYIT.

- No more than 30 semester hours in professional courses outside the arts and sciences.

- Achievement of at least 2.00 cumulative quality point average in coursework taken at SUNYIT.

- A grade of “C” or higher required in all core courses (psy 305, 310, 385, 493) and statistics for a degree in psychology.
B.A. Degree Requirements

I. General Education (54 credits)
   Mathematics (MAT 111 or equivalent) 3-4
   Natural Sciences
      Lab Science 3-4
      Other Science 3-4
   Social Sciences (ANT, ECO, GOG, POS, SOC, STS) 9-12
   American History 3-4
   Western Civilization 3-4
   Other World Civilizations 3-4
   Humanities 3-4
   The Arts 3-4
   Foreign Language 3-4
   Basic Communication 3-4
   Upper Division Writing 4
   Statistics (Intro Statistics) 3-4
   Arts & Science Electives (balance of remaining credits)

II. Program Requirements (38-44 credits)
   All majors, regardless of the track they choose, will be required to complete the following core courses:

   A. Core Courses
      *A grade of C or better is required of Psychology majors in these core courses.
      PSY 100 Principles of Psychology
      PSY 405 History and Systems of Psychology
      STA 100 Statistics
      PSY 310 Research Methods
      PSY 385 Evaluation Research
      PSY 493 Senior Seminar

   B. Track Selection
      All majors will be required to complete one of the following tracks. They must take at least two intermediate electives and two advanced electives from the track that they select. They must also take at least one psychology elective outside their selected track. A minimum GPA of 2.0 is required for the selected track.

   Mental Health Track*
      Intermediate
      PSY 216 Child and Adolescent Development
      PSY 218 Adult Development and Aging
      PSY 222 Abnormal Psychology
      PSY 273 Dying Death and Bereavement
      PSY 325 Psychology of Gender
      PSY 326 Treatment of the Exceptional Individual
      PSY 331 Psychology of Personality
      PSY 377 Health Psychology

      Advanced
      PSY 445 Group Dynamics and Interpersonal Communication
      PSY 460 Neuropsychology
      PSY 470 Psychological Testing
      PSY 477 Principles of Psychological Counseling
      PSY 492 Practicum

   Social-Industrial Track**
      Intermediate
      PSY 242 Social Psychology
      PSY 262 Learning and Motivation
      PSY 331 Personality
      PSY 352 Industrial and Organizational Psychology
      PSY 390 Engineering Psychology & Human Performance

      Advanced
      PSY 415 Human Aggression and Nonviolence
      PSY 444 Applied Social Psychology
      PSY 445 Group Dynamics & Interpersonal Communication
      PSY 470 Psychological Testing
      PSY 490 Special Topics
      PSY 492 Practicum

   C. General Experimental Track***
      Intermediate
      PSY 242 Social Psychology
      PSY 262 Learning and Motivation
      PSY 360 Perception
      PSY 390 Engineering Psychology & Human Performance

      Advanced
      PSY 415 Human Aggression and Nonviolence
      PSY 425 Cognitive Psychology
      PSY 460 Neuropsychology
      PSY 492 Practicum

      * Students wishing to devise their own individual track may do so in conjunction with an advisor.
      ** It is suggested that students opting for the social-industrial track take two Management courses: Organizational Behavior (MGT 307), Human Resource Management (MGT 318), Organizational Development (MGT 406), and Consumer Behavior (MKT 465).
      *** It is suggested that students opting for the general experimental track take Genetics (BIO 302) and Evolution (BIO 310)

III. General Electives (30 credits)
   College-level courses in any discipline which carry SUNYIT or transferable credit. See (2) and (3) under Degree Requirements for the psychology program.

   124 Total Credits
Bachelor of Arts in Sociology

Sociology is the scientific and systematic study of human behavior. Sociologists explore the social forces that shape modern society, with an eye toward understanding how these dynamics create social inequalities. Students at SUNYIT receive a strong foundation in sociological theory and methods and sharpen these skills in areas that interest them, typically concentrating on the crime and justice or social services fields. However, sociological skills are applicable to a wide range of occupations, from medical research to journalism, from administration to marketing. In other words, the sociological perspective can be useful in many settings.

Your education at SUNYIT takes place on and off campus. The Sociology Program provides students numerous opportunities to work collaboratively with professors on research and writing projects, or to try out career paths through an internship. In these ways, students can engage intellectual ideas in a practical setting and make meaningful connections between classroom learning and the real world that makes them more attractive on the job market. Employers appreciate the practical experience our students can bring to the workplace.

Elective course work is centered around the social services and crime and justice concentrations. Students may take advantage of internships or practicum opportunities within the program.

Students are typically employed in:

Social/Human Services:
- chemical dependency
- disabilities
- veterans
- the elderly

Education:
- school counseling
- tutoring/mentoring programs
- special needs/disabilities
- alternative schools

Corrections and criminal justice settings:
- law enforcement
- corrections
- probation
- homeland security
- court officers (family and criminal)
- criminological research

Students may also pursue education in the following areas:
- Graduate school in Sociology
- Law school
- Master’s in Business Administration (MBA)
- Master’s in Social Work (MSW)

Will I be Able to Work Closely with Faculty?

Sociology students at SUNYIT have ample opportunities to gain practical research experience that will be valuable to them on the job market. At times, an entire course will plan and conduct a research project, often in conjunction with local organizations. Recent examples include: a survey of SUNYIT students on their satisfaction with campus life; a survey of factors that promote and inhibit economic self-sufficiency of women in the Mohawk Valley (for the Women’s Fund of Herkimer and Oneida Counties). Students also have opportunities to work with faculty individually under our Independent Study option. Students are encouraged to participate in a research project that will lead to a professional presentation or publication of a paper.

What do Sociology Majors do for Fun?

SUNYIT has a very active Sociology Club. Students plan and participate in social and community service activities. Club events include midnight bowling, outings with children from the local Big Brothers/Big Sisters organization, Take Back the Night events on campus (including speakers and a rally), fundraising for local charities (including raffles and canned good drives), providing aid to women and children fleeing domestic violence during the holidays, and a Rock the Vote campaign to encourage their fellow students to register for and participate in upcoming elections.

Degree Requirements Overview

1. Students must complete 10 courses in sociology and anthropology—at least seven of which must be completed at SUNYIT
2. Students may elect no more than two courses in anthropology toward the sociology major
3. All majors must take SOC 100 or SOC 110
4. All majors must take one intermediate elective before taking an advanced course
5. All majors must take two electives at the 100-300 level
6. All majors must take three courses (12 credits) at the 400-level
7. Students must receive a grade of “C” or better in all core courses
B.A. Degree Requirements

I. General Education Requirements
   All Sociology majors must complete the following General Education Courses:
   - Mathematics (MAT 111 or equivalent)
   - Natural Science
   - Lab Science
   - Other Science
   - Social Sciences
   - American History
   - Western Civilization
   - Other World Civilizations
   - Humanities
   - The Arts
   - Foreign Language
   - Basic Communication
   - Upper Division Writing (COM 306 or COM 308)

II. Program Requirements
   A. Required Courses
      SOC 100 Introduction to Sociology
      SOC 110 Social Problems
   B. Intermediate Course Electives
      SOC 210 Sociology of the Family
      SOC 314 Sociology of Deviance
      SOC 350 Chemical Dependencies and Human Behavior
      SOC 351 Sociology of Crime
      SOC 360 Sociology of Work
      SOC 381 Social Gerontology
      ANT 301 General Anthropology
      ANT 320 Social Policy
      ANT 382 Cultures, Health and Healing

III. Advanced Coursework
   Human Services
      SOC 410 Power and Violence in the Family
      SOC 411 Sociology of Community
      SOC 424 Social Welfare Policy
      SOC 446 The Individual and Society
   Criminal Justice
      SOC 450 Sociology of Corrections
      SOC 452 White Collar Crime
      SOC 455 Sociology of Law and the Courts
   Other Advanced Courses
      SOC 465 Sociology of Occupations and Professions
      SOC 466 Worker Social Psychology
      SOC 490 Selected Topics in Sociology (varies each semester)
      SOC 491 Independent Study
      SOC 495 Practicum in Sociology (offers internship opportunity)
      ANT 460 Ethnography

IV. Core Courses (Required of all Majors)
   SOC 100 or SOC 110
   SOC 310 History of Sociological Theory
   SOC 332 Methods of Inquiry
   ANT 321 Distinctions: Race, Class, and Gender
   SOC 493 Senior Seminar in Sociology
   STA 100 Statistical Methods

124 Total Credits
# Academic Minors

A student at SUNYIT has the opportunity to enrich his or her education by obtaining an academic minor in an area of study different from the area of the academic major. SUNYIT offers minors in accounting; anthropology; biology, computer and information science; communication and information design; computer information systems; entrepreneurship; finance; marketing; mathematics; nanotechnology; physics; psychology; science, technology & culture; and sociology, to complement major programs of study in business, the technologies, and health-related fields and liberal arts disciplines. These minors enable a student to pursue in-depth education in a second discipline that supports and enhances the primary field of study.

**NOTE:** To pursue an academic minor a student must complete a “Change of Program Form,” available online, www.sunyit.edu/registrar/forms, or at the Registrar’s Office.

## Accounting Minor

The accounting program offers a minor for students in majors other than accounting. The accounting minor fits into the curricula of SUNYIT by providing students with the opportunity to acquire knowledge in an important professional discipline that can complement their major. The minor adds value to a degree because all organizations maintain accounting systems and require that their employees understand the financial implications of tactical and strategic decisions. In an increasingly competitive job market, accounting knowledge can play a consequential role in satisfying the needs of employers.

**Total Credit Hours: 18***

**Prerequisite Education**

No prerequisites are required for a minor in accounting.

* A student must earn at least a C in every accounting course applied to the minor and at least 10 credits must be taken at SUNYIT.

## Biology Minor

The minor in Biology provides students with a solid scientific base that is becoming increasingly important in this world of advances in nanotechnology, medicine, and bioinformatics. Our program provides a broad base in biology with the option for the students to pursue elective courses within their interests. The minor in Biology also complements a wide variety of disciplines. Students in many other fields, including marketing, government and international politics, or law, will find that biology is not only rewarding, but also useful in their professional careers.

**Total Credit Hours: 20**

### C. Additional Requirements

i. At least 12 credit hours must be taken at SUNYIT
ii. Students must achieve a minimum “C” grade in the courses applied toward the minor.
iii. Elective substitutions must be approved by the Coordinator of Biology and Chemistry

## Anthropology Minor

The anthropology program offers a minor in anthropology. The minor is of value to students who wish to integrate interests in a wide range of humanist concerns with the cross-cultural perspective and analytic framework provided by anthropology. A student desiring a minor in anthropology must register with the program and take a minimum of 17 credits of anthropology courses, at least 8 of which must be taken at SUNYIT. The first course should be ANT 301 or an introductory anthropology course. To promote coherence, additional courses must be selected in consultation with an anthropology advisor.

**Total Credit Hours: 17**

### A. Required Course

ANT 301 General Anthropology or Equivalent

### B. Additional Courses:

- ANT 320 Social Policy
- ANT 321 Distinction: Race, Class and Gender
- ANT 371 People and Systems: Cultural Perspectives on Information Practice
- ANT 382 Cultures, Health and Healing
- ANT 391 Selected Topics in Anthropology
- ANT 460 Ethnography
- ANT 491 Independent Study (Variable 1-4)
Communication and Information Design Minor

The communication and information design program offers a minor in communication and information design. The minor is valuable to students pursuing studies in various disciplines, such as mathematics, engineering, computer science, business, or psychology, who wish to enhance their communication skills and make themselves more marketable.

Total Credit Hours: 20

A. Required courses (8 credits)
   COM 306 or COM 350 or COM 400 AND COM 306

B. Electives (12 credits)
   With guidance and prior approval from a faculty adviser, students pick three courses with a COM prefix.

Computer Information Science Minor

The minor in Computer & Information Science is a valuable choice for students in all technical disciplines as well as for students in management, social sciences, and mathematics. The importance of computer and information science is increasing in all organizations and businesses. Use of ever-changing hardware and software systems continue to permeate research laboratories and offices throughout the world. In a competitive job market, an understanding of the computer and information science field can play a significant role in satisfying conditions for employment.

Total Credit Hours: 20

A. Required Courses (12 credits)
   MAT 115  Finite Mathematics for Computer Science
   CS 240  Data Structures & Algorithms
   CS 249  Object-Oriented Programming

B. Elective Courses (at least 8 credits)
   CS 220  Computer Organization
   CS 330  Operating Systems and Networking
   CS 350  Information and Knowledge Management
   CS 370  Software Engineering

   No more than eight credits may be applied to both the Computer & Information Science and Computer & Information Systems minors. At least 12 credits must be taken in residence at SUNYIT. A maximum of two courses taken at other institutions may be applied to the minor.

Entrepreneurship Minor

A student designing a minor in entrepreneurship must register for the program with the Department of Business Management. The following criteria apply:

1. The minor must be a minimum of 17 credits
2. At least 12 credits must be taken in residence at SUNYIT
3. Any course substitutions must be approved by an academic advisor via an academic petition
4. A student must earn at least a C+ or better grade in each course, including transfer courses

Total Credit Hours: 17

A. Required Courses
   ENT 375  Introduction to Entrepreneurship
   FIN 378  Finance for Entrepreneurs
   ENT 485  Business Planning for Entrepreneurs

B. Elective Courses (select two)
   MKT 378  Marketing for Entrepreneurs
   ENT 378  Entrepreneurial Technology Management
   ENT 492  Entrepreneurship Internship
A. Required Courses (14-16 credits)
   ACC 201  Financial Accounting
   FIN 302  Financial Management Principles
   FIN 332  Fundamentals of Investments
   FIN 411  Financial Management Problems

B. Elective Courses (select one)
   FIN 341  Financial Institutions
   FIN 343  Personal Finance
   FIN 420  Financial Planning and Control
   ECO 330  Economics of Aging
   ECO 405  Economics of Health Care

At least 12 credits must be taken at SUNYIT. Any course substitutions must gain prior approval through an academic petition.

Total Credit Hours: 18

**Corequisites. Courses must be taken at the same time.**

C. Electives (Advanced Courses) (9 credits)
   HIM 305  Inpatient Coding and Classification
   HIM 306  Outpatient Coding and Classification
   HIM 400  Nonhospital Health Information Management Systems**
   HIM 401  Systems for the Evaluation and Improvement of Health Care
   HIM 435  Healthcare Management/Medical Information Systems 3
   HIM 440  Electronic Health Records 3
   HIM 490  Selected Topics in Health Information Management
   HIM 494  Specialty Rotation**

*At least eight credit hours must be taken at SUNYIT. At least 12 credit hours must be required courses in the student’s major. The student must maintain a minimum cumulative grade point average of 2.0 (average of “C”) in the minor.

Human Resources Management Minor

The human resources management function includes a variety of activities critical to the success of any organization. Key among them is deciding what staffing needs you have and whether to use independent contractors or hire employees to fill those needs, recruiting and training the best employees, ensuring they are high performers, dealing with performance issues, and ensuring your personnel and management practices conform to ethical standards. The human resources management minor offers the student the opportunity to expand his/her background in these essential decision areas. At least 12 credit hours must be taken at SUNYIT. Any course substitutions must gain prior approval from the Department of Business Management via an academic petition. A student desiring a human resources management minor must apply through the Department of Business Management.

Total Credit Hours: 17

A. Required Courses
   MGT 318  Human Resources Management
   MGT 320  Appraisal, Motivation and Compensation
   MGT 415  Industrial and Labor Relations
   MGT 425  Human Resource Selection and Staffing
   BUS 420  Employee Benefits

**Corequisites. Courses must be taken at the same time.**
Marketing Minor

Selecting a marketing minor will prepare a student for a career in a business or non-profit organization. The primary challenge to a marketing professional is to create and retain profitable customers through activities such as market research, competitive analysis, determination of market potential, market segmentation, and target marketing. This information is used to develop the marketing strategy mix, marketing plans, marketing audits, and other strategic policies. The evolution of the global economy invigorated through the use of modern technology demands an ever-increasing attention to the marketing function as an integral part of the total business environment. Revenue enhancement, social and ethical responsibility, cost controls, and stockholder wealth maximization are all driven by the strategies developed within the marketing function. To complete the minor in marketing, at least 12 credits must be taken at SUNYIT. Any course substitutions must gain prior approval from the Department of Business Management via an academic petition. A student desiring a marketing minor must apply through the Department of Business Management.

Total Credit Hours: 17

A. Required Courses
   MKT 301 Marketing Principles
   MKT 312 Marketing Management Problems
   MKT 321 Advertising
   MKT 465 Consumer Behavior

B. Elective Courses (select one)
   MKT 345 Retail Management
   MKT 410 Market Based Management
   MKT 470 Marketing Research

Mathematics Minor

The minor in mathematics is valuable for students who wish to pursue studies in mathematics, computer science, physics or engineering or who wish to be more competitive in the job market.

Total Credit Hours: 20

A. Required Course (8 credits)
   MAT 151 Calculus I (Differential Calculus)*
   MAT 152 Calculus II (Integral Calculus)*

B. One Course from the following (4 credits)
   MAT 225 Applied Statistical Analysis
   MAT 260 Differential Equations
   MAT 340 Linear Algebra

C. Two Courses from the following (8 credits)
   MAT 253 Calculus III (Multivariate Calculus)
   MAT 335 Mathematical Modeling
   MAT 345 Introduction to Graph Theory†
   MAT 370 Applied Probability
   MAT 380 Abstract Mathematics: An Introduction†
   MAT 413 Discrete Mathematics for Computer Science
   MAT 420 Complex Variables and Their Application†
   MAT 423 Vector and Tensor Calculus†

   MAT 425 Real Analysis†
   MAT 430 Number Theory and Its Applications†
   MAT 450 Partial Differential Equations†
   MAT 460 Numerical Differential Equations†
   PHY 401 Electromagnetism†
   MAT 490 Special Topics†
   MAT 491 Independent Study†

Specific selections of courses must be worked out with the mathematics faculty. The equivalent of up to three of the above courses that contribute to the minor can be used as transfer credit.

* MAT 121 may be substituted
* MAT 122 may be substituted
† Student should register for this course only after a consultation with a mathematics faculty teaching the course.

Nanotechnology Minor

Nanotechnology has many commercial applications in the area of health care, computer technology, manufacturing, environment, agriculture and others. Its full implementation will have a broad economic and social impact. According to the National Science Foundation (NSF) products incorporating nanotechnology will contribute approximately $1 trillion to the global economy by the year 2015. About two million workers will be employed in nanotechnology industries, and three times that many will have supporting jobs.

The minor will provide knowledge and skills valuable to students planning to seek employment or graduate studies in fields related to microelectronics, information storage, optoelectronics, pharmaceutials, agriculture and medicine.

Total Credit Hours: 20

A. Sciences Courses (8 credits)
   PHY 101 General Physics
   CHE 110 Essentials of Chemistry
   BIO 101 Introduction to Biology

B. Nanotechnology Courses (12 credits)
   ETC 290 Introduction to Nanotechnology
   ETC 392 Fundamentals of Microelectromechanical Systems (MEMS) and Nanoelectromechanical Systems (NEMS)
   MTC 336 Material Science Applications
   ETC 495 Nanotechnology Research
Network & Computer Security Minor

The growing need for information security in critical data and communications networks makes the minor in Network and Computer Security a smart choice for all Engineering and Engineering Technology students. Even those in fields such as Business and Nursing will benefit from a better understanding of today’s networks and how they affect our industries, workplaces, and lives.

The Network and Computer Security minor provides a broad understanding of information security principles, data communications networks, and computing systems. The core courses provide a firm background in information security, data communications networks, and computer system security. The wide range of electives enables a customized program to be developed that serves the need of various academic majors. For example, students majoring in Engineering or Engineering Technology are encouraged to take IS 310 and IS 315 as electives. Students majoring in Business are encouraged to take IS 310 and NCS 330 as electives.

A minimum of 8 credits making up the requirements for the minor must be taken at SUNYIT. Students are advised to consider the additional prerequisite coursework needed for some of the courses applicable to the minor. The minor requires a minimum of 17 credit hours, at least 8 of which must be taken in residence.

Total Credit Hours: 17

A. Required Courses
   NCS 181 Introduction to Cybersecurity
   NCS 210 Network Transmission Technology
   NCS 320 Information Assurance Fundamentals

B. Elective Courses
   IS 310 Hardware and Network Infrastructure
   IS 315 Network Standards and Protocols
   NCS 330 Information Assurance Ethics, Policies and Disaster Recovery
   NCS 350 Wireless Systems and Security
   NCS 383 Network Firewalls
   NCS 384 Network Intrusion Detection
   NCS 435 Computer and Network Forensics
   NCS 450 Network Security
   NCS 460 Advanced Wireless Security
   NCS 490 Special Topics in Network and Computer Security

Physics Minor

The minor in physics would be useful for students who wish to pursue studies in physics or engineering, or who wish to be more competitive in the job market.

Total Credit Hours: 20

A. Required courses (8 credits)
   PHY 201 Calculus Based Physics I
   PHY 202 Calculus Based Physics II

B. Three courses from the following options (12 credits)
   PHY 203 Calculus Based Physics III
   PHY 325 Geometrical Optics
   PHY 326 Physical Optics
   PHY 401 Electromagnetism
   PHY 420 Intermediate Mechanics
   PHY 415 Introductory Quantum Mechanics
   PHY 490 Special Topics in Physics
   PHY 491 Independent Study

A physics course approved by the Engineering, Science, and Mathematics Department.

The equivalent of up to three courses that contribute to the minor can be applied as transfer credit.

Psychology Minor

The psychology program offers a minor for students in other disciplines. An understanding of psychology underlies all human activities. Consequently courses dealing, for instance, with human motivation, individual differences, childhood and aging, prejudice, stress, cognition, human/machine interaction, and learning would add depth to any major. A psychology minor might be especially useful to students planning careers in business, human services, criminology, and health sciences.

The course requirements for the minor are a minimum of 18 credits, eight of which have to be completed at SUNYIT. An introductory course in psychology does not count toward the 18 credits. Students are required to take History and Systems of Psychology (PSY 305), two intermediate courses and two advanced courses.

Total Credit Hours: 18

A. Required Course
   PSY 405 History and Systems of Psychology

B. Intermediate Courses (Select two)
   PSY 262 Learning & Motivation
   PSY 222 Abnormal Psychology
   PSY 331 Psychology of Personality
   PSY 218 Adult Development & Aging
   PSY 360 Perception
   PSY 273 Death, Dying & Bereavement
   PSY 325 Psychology of Gender
   PSY 365 Educational Psychology
   PSY 390 Engineering Psychology & Human Performance
**Sociology Minor**

A minor in sociology is of value to students who wish to integrate interests in business, nursing, the technologies and computer science, or other arts and sciences disciplines with the broad conceptual and analytical framework provided by sociology. A student desiring a minor in sociology must register with the program and take a minimum of 17 credits of sociology courses, at least 8 of which must be taken at SUNYIT.

**Total Credit Hours: 17**

**A. Required Courses**

SOC 100, 110, or an introductory sociology course
Minimum of two courses at the 200-level or above (at least one of these must be at the 400-level)

**B. Additional Courses** to promote coherence, must be selected in consultation with a sociology advisor.

---

**Technology and Culture Minor**

From the photograph to digital imaging, film to YouTube, television to online gaming, technologies are shaping and reshaping the ways we express, interpret, and understand ourselves and our lives. The IDS Minor in Technology and Culture offers students the opportunity to explore the connections between technology and culture and examine how these interrelations shape our experience and understanding of contemporary life. Through a selection of interdisciplinary courses, students can study both how technology has shaped the cultural environment and how the interpretation of culture helps us to understand the diversity of experiences — the hopes, opportunities, and anxieties — of living in an increasingly complex technological world. Doing so helps us to understand what it means to be a part of this world, and empowers us to engage it by developing the critical skills to analyze, interpret, and navigate the interrelations between technology and culture.

**Total Credit Hours: 20**

To earn the Interdisciplinary Studies Minor in Technology and Culture, students must successfully complete 20 credits from the courses listed below, of which a minimum of 8 credits be taken at the 300/400 level. Students must earn a C average in the courses applied towards the minor and earn a minimum grade of C- in each course applied toward the minor. A minimum of eight credits applied towards the minor must be taken at SUNYIT.

**A. 100/200 level courses**

IDS 102  Art and Culture
IDS 103  Science, Technology, and Human Values
IDS 201  Perspectives on Knowledge

**B. 300/400 level courses (minimum 8 credits)**

IDS 301  Monsters, Robots, Cyborgs
IDS 302  Postmodernism and Popular Culture
IDS 304  Technology in American History
IDS 435  Art and Technology
Student Services

The faculty and staff of SUNYIT are committed to providing a full range of advising, counseling, tutorial, and other services to support the academic progress of students. On-campus health care, housing, career services, recreation/sports programs, and student activities programs are also provided by student services offices.

New Student Orientation Program

New student orientation, advisement and registration

New students are required to attend the Orientation/Registration Program offered at the start of every term. Activities include:

- Orientation to college services, social life, residence life, athletics and recreation programs.
- Academic expectations, advisement and registration.

During Orientation students have the opportunity to begin making positive connections with peers, faculty and staff.

Health and Wellness Center

The Health and Wellness Center, conveniently located in the Campus Center, provides evaluation, treatment and prevention of health-related problems for full-time, part-time, undergraduate and graduate students. The Health and Wellness Center is staffed by a part-time physician, nurse practitioners, registered nurses, a health educator and support personnel. It is open daily Monday through Friday with the hours posted each semester.

SUNYIT is supported through a mandatory health fee each semester. This fee provides each student comprehensive, confidential health-related services by appointment or walk-in basis at the Health and Wellness Center. Not to be confused with the mandatory health insurance fee that covers off-campus health care services. Some services provided by the mandatory health fee include:

Clinical Services:

- Sick/Injury Care - medical evaluation, treatment & follow-up medical care
- Vaccinations - MMR, Influenza, etc.
- Women's and Men's Health - GYN examinations, birth control, STD testing, etc.
- Blood work/laboratory work - throat cultures, HIV, etc.
- Medications - prescription & over the counter
- Medical Equipment/Supplies/Other - crutches, band-aids, cough drops, etc.
- Referrals - to private practitioners, community agencies, etc.

Health Education:

- Free, confidential HIV testing & counseling
- Alcohol/substance abuse screening & counseling
- Current health-related educational literature/resources
- Appropriate health guidance with necessary referral
- Prevention focused programs
- Peer education programs
- Smoking cessation assistance & counseling
- Registered Dietician Services

Student Health Requirements for Attending SUNYIT:

All students are REQUIRED to provide the following health documents to the Health and Wellness Center before August 15 for Fall admission and January 15 for spring.

1. Immunizations - Mandatory for all students registered for six (6) or more credits. Non-compliant students will be de-registered pursuant to the directives of the law.

   a) Measles, Mumps and Rubella (MMR) - NYS Health Law § 2165 requires all on campus students provide documentation of immunity to MMR. Persons born prior to 1/1/57 are exempt.

      Required documentation:
      ✓ Measles: Two dates of immunization given after 1967 AND on or no more than 4 days prior to the first birthday
      ✓ Mumps: One date of immunization given on or no more than 4 days prior to the first birthday
      ✓ Rubella: One date of immunization given on or no more than 4 days prior to the first birthday

      OR
      ✓ Titers: Date AND positive results of the measles titer, and/or mumps titer and/or rubella titer

   b) Meningococcal Meningitis - NYS Health Law § 2167 requires all on or off campus students provide the following documentation:

      ✓ One date of the meningococcal immunization given within the past 10 years

      OR

      ✓ Completion of the Meningococcal Information Response Form indicating acknowledgement of meningococcal disease risks and refusal of the meningococcal meningitis immunization signed by the student (or student's parent/guardian if under 18 years old). The Meningococcal Information Response Form is enclosed in the admission packet.

2. Health History and Physical Examination within the last two (2) years - Mandatory for all students registered for twelve (12) or more credits. The student may only receive clinical services at the Health & Wellness Center after the health history and physical examination have been submitted. Full-time students will not be permitted to register for another term until this health requirement has been met.

3. Medical Insurance - Mandatory for all students registered for twelve (12) or more credits. All full-time students must possess some type of medical insurance. SUNYIT provides a basic, economical medical insurance plan for students who need coverage or wish to purchase additional coverage.
a) **Domestic Medical Insurance Policy** - Each semester all domestic students taking twelve (12) or more credits are automatically billed for a medical insurance policy as designated by SUNYIT. If a student has other medical insurance coverage, i.e., under a parent or employer, and the student does not wish to purchase the SUNYIT designated medical insurance, a waiver must be completed prior to attendance each semester. Automatic billing will occur, if a waiver is not completed each semester. The medical insurance waiver is online: http://healthwaiver.sunyit.edu.

Students taking less than twelve (12) credits are not billed for the medical insurance designated by SUNYIT but may purchase it at the Business Office each semester.

b) **International Medical Insurance Policy** - The State University of New York requires all international students entering the country for study or research, or any US student studying abroad in a SUNY sponsored program purchase a SUNY medical insurance policy. Medical insurance information is mailed upon admission and students are automatically billed.

For questions or more information, please contact the Health and Wellness Center, phone 315-792-7172 fax 315-792-7371.

**Residential Life and Housing**

Education is more than formal instruction in the classroom. Informal educational opportunities, including companionship with others are essential aspects of the total college experience. The residence halls are an important setting for this informal education. These student facilities are places for teaching responsible citizenship and for developing personal and social values. To that end, all freshmen and sophomores who are not eligible for an exemption are required to live on campus. Each resident living in SUNYIT housing is required to sign and submit a Request for Accommodations Form which is binding for the entire academic year. Exemptions from on-campus housing may be available to students who live with a parent/parents or legal guardian, reside within a 30-mile radius from campus, who have dependants, live with a spouse, have verification of prior military experience, or other special circumstances. Requests for exemptions are required in writing to the Director of Campus Life.

Housing is available for over 800 residents. Adirondack and Mohawk residence halls are for graduate and upper class students and contain primarily single room accommodations.

Oriskany Hall will be our brand new residence hall opening fall 2011 and will house our freshmen in double room accommodations. Each apartment is completely furnished and is comprised of a living room, bedrooms, bathroom and storage space.

Ethernet, wireless and cable service are provided for each resident at no additional charge.

Resident students also have access to laundry facilities, study and recreation lounges. The residence halls are staffed 24 hours per day by student Resident Advisors as well as by professional Residential Life and Housing staff. The Residential Life and Housing staff are committed to assisting students in fulfilling their social and housing needs.

Resident students are required to purchase a meal plan. For more information, please contact the Residential Life and Housing Office at (315) 792-7810 or visit the SUNYIT website.

**Personal Safety and Security**

A high priority is placed on campus safety and residence hall security. The residence halls are protected by smoke and heat detectors and exterior doors are secured by an electronic access system that is activated by the resident student’s SUNY-Card. The College’s University Police Department maintains regular patrols in the residence hall areas on a 24-hour-a-day basis and also monitors the outside public areas with closed-circuit television. Information on campus crime statistics (Jean Cleary Act) is available in the Admissions Office or at the University Police Office.

**Off-Campus Housing**

Students are invited to contact the Campus Life Office to receive information about off-campus housing opportunities. Information on Utica-area rooms, apartments, and houses for rent is available.

**Food Service**

Campus food service is provided in two locations at SUNYIT. It is required that all resident students participate in the campus meal plan.

Meal plan participants are able to dine in the Campus Center Dining Hall with unlimited seconds for a meal swipe. A nutritious menu is available with a variety of stations to choose from; there is an entrée line, which also offers vegetarian choices, a grill to order area, deli station with Panini’s, homemade soups, pizza, beverages, salad bar and dessert station. Operation hours are seven days a week, providing breakfast, lunch and dinner menu, with continuous service during the week. Weekends offer brunch and dinner.

The Student Center is a full service food court. Hours of operation are breakfast, lunch, dinner and late night Monday through Friday. Saturday and Sunday the Student Center is open for late night dining. The Student Center features a stone baked pizza area, create your own sub station, homemade soups, charbroiled grill area, made to order sauté station, fresh baked desserts, salads, Simply to Go items, beverages, snacks, soft ice cream and smoothie bar.

**Student Organizations and Boards**

There are 40 academic and social clubs and student organizations, a student-run publication, four governing boards, a student senate, Residence Hall Council, and a campus radio and cable TV station (Wildcat Media) providing students with a choice of extracurricular activities to make life outside of class more enjoyable both educationally and socially.

**Performing Arts/Cultural Interests**

The SUNYIT Campus Activities Board (CAB) sponsors musical and theatrical performances throughout the academic year. Students may purchase discount tickets to performances presented by internationally acclaimed artists in the Broadway Theatre League at the Stanley Performing Arts Center and the Great Artists Series of the Munson-Williams-Proctor Institute.
The Gannett Gallery, located in Kunsela Hall, hosts several art exhibitions a year, including SUNYIT’s annual regional show.

SUNYIT’s Cultural and Performing Arts Council funds fine arts, music and theater programs on campus throughout each academic year.

Culturally diverse programs are also available through programming by the SUNYIT Campus Activities Board and special interest groups (International Students Association and Black and Latino American Student Union). Black History Month, Hispanic Heritage Month, and other cultural programs provide the opportunity to celebrate the unique contributions of our culturally diverse world.

In addition, academic programs sponsor lecture series, symposia on current research, demonstrations, and dramatic readings which are open to students and the SUNYIT community.

Students may also participate in performance ensembles in theatre and instrumental jazz.

**Career Services**

The Office of Career Services offers students a wide range of career planning services to include resume writing and interviewing workshops, mock interview sessions, job search and internship assistance, and individualized career counseling. Students are strongly encouraged to register with Career Services as soon as they are admitted to the college. Registering upon admission allows students to take full advantage of these services and to gain access to the comprehensive web-based student/employer database, College Central Network. Students who create an account receive targeted e-mails regarding internship and employment opportunities available throughout the academic year. Information is available regarding graduate school admissions procedures and graduate school standardized testing through the Career Services Office.

**Athletics and Recreation**

The intercollegiate sports and recreation program offers a variety of activities for the experienced student-athlete, the fitness enthusiast, the intramural participant and the avid sports fan. The Department of Athletics and Recreation encourages active participation from all students, faculty and staff at SUNYIT.

**Athletic Facilities**

The new Field House is equipped with a fitness center featuring a variety of treadmills, cross trainers, stair climbers and circuit training equipment, including free weights, which can benefit any fitness goals members of the SUNYIT community may have. The gym, running track, basketball court, and racquetball court comprise the Campus Center indoor facilities; outside, facilities include the Roemer fitness trail, soccer, baseball and softball fields, and a golf practice area. The Field House also features multiple court areas, a running track and an aerobics room and is adjacent to a lit turf field.

**Intercollegiate Teams**

Our intercollegiate sports program, a member of the NCAA, the NEAC, and ECAC, includes competitive teams in men's baseball, men's and women's basketball, men's and women's cross country, men's and women's soccer, women's softball, men's and women's volleyball and men's and women's lacrosse.

**Intramurals and Recreation**

Our recreation staff will help you to become involved in a myriad of single event or league intramural programs. Teams from the residence halls can take on teams of off-campus students in sports like volleyball, basketball and indoor soccer, or mix-and-match players with the help of the intramural director. We want you to become active and involved!

**For Credit Courses**

Athletics offers 1-credit courses in fitness and recreation. Learn how to utilize the fitness center equipment and how to manage a personalized strength training or aerobic training program. Begin playing or hone your skills in recreational sports like golf and racquetball. Classes are offered each semester.

**Club Sports**

Students interested in competing less formally have the opportunity to participate in a variety of club sports. The ski and snowboarding club, hockey club, scuba club, lacrosse club, bowling, indoor soccer, fencing, cricket, water polo and mountain biking/running club are examples of teams that the Student Association at SUNYIT has sponsored in the past.

**Become Involved**

When you come to campus, please visit with us and we’ll get you involved! Athletics is located in the Field House. For more information, contact us at 315-792-7520 or refer to our website at www.sunyit.edu.

**Student Activities and Student Government**

The SUNYIT Student Association (SUNYITSA) is the elected student government organization for the student body. Through student activity fees, SUNYITSA provides funding for a student publication, a student-run FM radio/TV cable station, and major campus programming and special events. Student organizations at SUNYIT provide students with leadership opportunities and with outlets for creative expression and campus involvement.

Professional, academic, and special interest clubs are open to all students. The Black and Latino American Student Union and the International Student Association provide peer support and multi-cultural activities for the campus. Academic honor societies, and academic clubs in every major, are also an important component of campus life at SUNYIT.

**Wellness Committee**

SUNYIT recognizes the importance of health education and prevention on the college campus as well as in the local community. This is why SUNYIT has established a Wellness Committee to promote these related issues. The purpose of the Wellness Committee is to provide the learner with valuable, current information that will prepare them to lead healthy lives long after leaving the learning environment. The committee is comprised of faculty, staff and students.

The committee schedules and holds programs on numerous health and wellness related topics for the campus community. The committee has held programs focusing on issues such as:
nutrition/weight management, alcohol/substance abuse, stress management, and personal safety, among others.

Anyone interested in membership on the Wellness Committee should contact the Health and Wellness Center (Room 217, Campus Center, x 7808).

Educational Opportunity Program (EOP)
The Educational Opportunity Program (EOP) is designed to help provide a broad range of academic and financial services to New York State residents who, because of academic and economic circumstances, would otherwise be unable to attend a postsecondary educational institution.

The Educational Opportunity Program is a New York State funded initiative that focuses on equity. Educational Opportunity Program provides structured support services including counseling, tutoring, and often times remedial/developmental coursework. In addition to academic support, program participants receive financial assistance toward their college expenses. As a whole the Educational Opportunity Program is often utilized to recruit prospective students and support the retention and graduation of participants.

For further information please contact us by visiting our office in the Kunsela Hall Room B101 or call 315-792-7805.

Counseling Center
The Counseling Center, associated with the Health & Wellness Center is located in the Campus Center, Room 217. Office hours are Monday through Friday, 8 a.m. to 4:30 p.m. by appointment. Additional times are available, specific to the individual student. All services are strictly confidential.

The Counseling Center is here to support and enhance the educational experience of SUNYIT students. The center provides prevention, intervention and referral services to the student addressing emotional and behavioral needs and issues. The center is a great resource for faculty, staff and families to assist the SUNYIT student by providing counseling services regarding personal and emotional concerns, relationship difficulties, college adjustment concerns, etc.

Questions regarding the Counseling Center can be directed to 315.792.7172.

Services for International Students
The Office of International Student Services, located in the Student Center, Room S105, serves the international community of SUNYIT, including students, visiting scholars, and faculty. We provide immigration services, initial and on-going orientation programming and general support to the international population.

Through our immigration services, we help international students maintain their status in compliance with immigration regulations and apply for the immigration benefits for which they are eligible. The International Student Services Office provides assistance and advocacy for all international students with campus, community, state, and federal offices. We offer numerous workshops on immigration topics to international students and the campus community.

As part of our orientation programming, we provide extensive fall and spring orientation programs for incoming international students and workshops throughout the semester on topics relating to living and working in the U.S. The Office of International Student Services works with student groups to help provide activities to complement the educational experiences of international students.

We also assist our current students who are interested in developing skills and experience in full and part-time off-campus work related to their studies. There are two options for this: Curricular Practical Training and Optional Practical Training. There are a limited number of opportunities for international students to work on campus during the semester and over semester breaks.

Services for Students with Disabilities
SUNYIT welcomes students with disabilities. A student with a disability should discuss individual needs with the Disability Services Counselor at any time to understand options for academic accommodations or disability services at SUNYIT. An appointment with the Disability Services Counselor is needed for the consideration, planning, and provision of the necessary support services.

The Disability Services Counselor assists with the following services: counseling/orientation for new and transfer students, advance registration for mobility-impaired students, securing housing, arrangements for transportation and parking, and academic accommodation plans based on a student’s documented disability.

The Disability Services Counselor serves as liaison with the New York State Vocational Rehabilitation Service, the New York State Commission for the Blind and Visually Impaired, and other agencies serving or sponsoring the student.

Students with disabilities seeking accessible suites in the residence halls should contact the Residential Life and Housing Office at 315-792-7810. For further information regarding the Disability Services Program at SUNYIT go to the Disability Services Website: http://sunyit.edu/disability_services

Earning College Credit by Examination
- College Level Examination Program: 34 examinations are offered to persons who wish to earn college credit by demonstrating that they possess knowledge equivalent to that acquired in the college courses. The College Level Examination Program offers computer-based testing. SUNYIT is a “limited” testing facility. SUNYIT awards appropriate college credit for each examination. Questions regarding CLEP should be directed to the Learning Center.

- Excelsior College Examinations (formerly Regents College) offers 31 examinations by which individuals can demonstrate competency.

- DANTES Subject Standardized Tests (DSST): Examinations that provide the opportunity to demonstrate learning acquired outside the traditional classroom. 37 Test Titles are available covering a broad range of college curricula.

Individuals interested in learning more about DANTES and Excelsior services should contact the Registrar’s Office.
General Information

Physical Plant

The SUNYIT campus is situated on more than 400 acres of naturally wooded terrain interspersed by several small streams and ravines. Since the opening of the first building, Kunsela Hall, in 1984-85, the campus has grown to include seven major buildings and three residential complexes. Additional buildings are planned to accommodate future growth. Wireless Internet access is available in all residence halls and campus buildings.

In 2011, construction of three buildings was completed: a Student Center, Field House and Oriskany Residence Hall, a capital investment of nearly $60 million that will meet students’ educational and extracurricular needs. In 2010 a ceremonial groundbreaking was held to mark the start of a technology complex comprising a nanotechnology research facility, the Computer Chip Commercialization Center, and an academic complex, the Center for Advanced Technology.

Kunsela Hall was the first and remains the largest campus building. Opened in February 1985, Kunsela contains admissions and most administrative offices, and a number of faculty offices. It also houses traditional and special-purpose classrooms, a computer center, a 240-seat lecture hall, the college bookstore, and the Gannett Gallery, which hosts a variety of art exhibits.

Donovan Hall is the central academic building, having opened its doors to students in the fall of 1988. In addition to its laboratories, Donovan also features a variety of special purpose classrooms and small lecture halls, and is home to a number of academic and faculty offices. The building’s architecture echoes SUNYIT’s early days when the college operated in several locations, including former manufacturing buildings in west Utica.

FACING Kunsela Hall is the Cayan Library, which opened in March 2003. Housing the campus library collections and archives, the building offers private study rooms and a variety of settings for reading and studying; dozens of computer work stations in the first-floor reference area; a 30-seat instruction/meeting room; a café; and a second-floor study room with a fireplace. In 2010, as part of the information and learning resources department, library services were expanded to include student computer support; a help desk is located on the first floor.

Near Cayan Library, Kunsela and Donovan Halls is the $13.6 million Student Center. Intended to promote student engagement and enhance student life programs, this Leadership in Energy and Environmental Design (LEED) Silver building gives students a unique gathering place. An open design creates flexible spaces for multi-purpose events, as well as a large food court. Other building features include a café, theater, game room, student radio station, and Student Association offices. The 43,000 square foot building is equipped with advanced audio/video systems and a wall-sized visual media display.

Located north of Donovan Hall and the Student Center is the 67,000 square foot Field House, which features a fitness center, two full-sized basketball courts, four volleyball courts, indoor practice facilities, a running track, an expansive training room, team rooms, and athletic department offices. Completed in 2011, this facility accommodates 3,500 spectators and is home to intercollegiate athletics, intramural, and recreation programs.

SUNYIT Smoking Policy

Smoking is allowed in designated outdoor areas only. SUNYIT recognizes the hazards of smoking and fully acknowledges the rights of non-smokers as well as smokers. For complete details of the policy, please reference our website: www.sunyit.edu.
Library

Named after SUNYIT’s third president, the Peter J. Cayan Library is open seven days a week so that SUNYIT community members can take advantage of the many library services when they most need them. The library includes 10 group study and collaboration spaces and two computer lab areas for students to use to complete their academic projects. The library staff is available anytime to assist students in finding the appropriate resources, whether that be an article from one of the numerous electronic databases, a book from our extensive on-campus collection, or material from another library via inter-library loan. On and off campus students can also avail themselves of the library services remotely, including access to a reference librarian 24 hours a day, by using their SUNYIT network ID from any Internet connected browser.

Computing and Media Services

The use of computers is widely integrated into almost all facets of life at SUNYIT. Every student receives a SUNYIT computer account for access to computer and network resources and an email account for college communications. All official electronic communications between students, faculty and campus offices are conducted through the campus email system. Students, faculty, and staff can get assistance with the various computing and media services around campus by coming to, calling, or submitting a help ticket to the help desk located in the Cayan Library. Community members can use SUNYIT’s computer labs as well as the wireless and wired network to access various specialized software applications. Virus protection and other software are available to students at no or low costs. Information pertaining to computing resources and software downloads is available at http://www.sunyit.edu/its.

All classrooms are equipped with multi-media technology to provide the opportunity for an interactive learning experience, and one dedicated classroom includes video and audio conferencing capabilities, enabling speakers and experiences from across the globe to share in the classroom experience.

The instructional resources center, located in Kunsela Hall, provides all non-entertainment audiovisual and television services to SUNYIT. Studio facilities combined with trained staff enable on-campus production for both video and audio programs in a wide variety of formats for many different uses. Television as an educational aid is an active component. The instructional resources center also provides services to students. A computer graphics workstation provides students access to producing materials and presentations for the classroom. Digital cameras and camcorders are available to borrow for class projects. Students also have access to videotape editing equipment.

Students are encouraged to be an active part of the technology infrastructure of the college. Students may elect to pursue employment within one of the technology support areas or, through coordination with the appropriate faculty advisor, address a specific technology challenge as part of a for-credit academic experience.

Teaching and Learning Support

Student success is very important to SUNYIT, and the services available through our teaching and learning support area are designed to ensure all students have the best possible support during their time at SUNYIT. The teaching and learning support group provides assistance to students and faculty on the exploration and usage of various instructional technologies, including our online learning management system, ANGEL. Students interested in help with either math or writing skills can visit our learning center. The Learning Center has both professional and student tutors available for a wide range of specific courses as well as a small computer lab which students can use with their tutors for more intensive help. The Learning Center also manages any ADA based testing accommodations.

The Learning Center

The Learning Center offers academic help for students in several ways. Tutors are available for most subjects offered at SUNYIT, as well as for English as a Second Language. Special small group instruction is also available for selected courses. The Center offers workshops in areas such as study skills, writing and research, time management, and test taking. Services of the Learning Center are free of charge and available to all SUNYIT students.
Automobiles

Convenient parking facilities adjacent to the SUNYIT’s buildings are provided for students and personnel. SUNYIT students and personnel are required to register with the University Police all motor vehicles using SUNYIT-controlled parking facilities. Vehicles parked in SUNYIT parking areas must have a current parking decal properly displayed. Parking fees shall be charged for motor vehicles parked within designated lots. SUNYIT, however, assumes no liability for the property or safety of those using the facilities.

SUNYIT Identification Card

The campus identification card at SUNYIT is known as the “SUNYIT Card”. This card provides access to certain campus buildings and services. SUNYIT Cards may be obtained at the office of the College Association (Room A217, Kunsela Hall). Lost or damaged SUNYIT Cards may be obtained for a replacement fee by contacting the College Association at 315-792-7341, or in person at the office of the College Association. Lost SUNYIT Cards must first be reported to University Police. (See SUNYIT Card policies in the Student Handbook for more information about regulations governing the use of the SUNYIT Card).

University Police

The University Police Department is a team of professionals working with the campus community. Its goal is to provide a safe environment in which the educational mission of SUNYIT can be fully realized.

The University Police Department is primarily service-oriented, and is tailored to meet the specialized needs of a campus community. The work of the department includes crime prevention and control, criminal investigations, traffic and parking supervision, building security, emergency first-aid treatment, the maintenance of public order, and other related activities.

The officers of the department are responsible for the enforcement of all state and local laws, as well as the rules and regulations of SUNYIT. The officers are police officers, and obtain their powers from the Criminal Procedure Law. The department’s ability to function as an independent law enforcement agency enables it to provide a sensitive, measured response to law violations. SUNYIT Police Officers are sanctioned by the New York State Department of Criminal Justice Services and carry New York State law enforcement officer certification.

The officers of the department are responsible for the enforcement of all state and local laws, as well as the rules and regulations of SUNYIT. The officers are responsible for the enforcement of all state and local laws, as well as the rules and regulations of SUNYIT. The officers are police officers, and obtain their powers from the Criminal Procedure Law. The department’s ability to function as an independent law enforcement agency enables it to provide a sensitive, measured approach to all situations requiring police officer assistance, while still maintaining the autonomy of SUNYIT.

The Advisory Committee on Campus Safety will provide upon request all campus crime statistics as reported to the United States Department of Education.

For more information: http://ope.ed.gov/security
SUNYIT University Police: 315-792-7222

College Association at Utica/Rome, Inc.

The College Association at Utica/Rome is a not-for-profit corporation which contracts with the State University to provide auxiliary services on the campus. Its general purposes are to establish, operate, manage, promote, and cultivate educational activities and relationships between and among students and faculty. It also aids students, faculty, and administration at SUNYIT in furthering their educational goals, work, living and co-curricular activities. Any surplus income must be used to advance and promote educational and benevolent purposes of the corporation and SUNYIT. The association’s membership is composed of representatives of the student association, faculty, staff, and senior officers of SUNYIT. The policies of the association are established by its board of directors.

The association provides administrative and accounting services for many organizations, including student government. It also operates the SUNYIT bookstore, vending and food services.

Governance

The SUNYIT governance system incorporates administrative, academic, student affairs, and planning and budget committees structured to develop policy. It provides direct input for faculty and student organizations to the general policy making process. Additional information on the governance system is contained in faculty and student handbooks and are available in the Provost’s Office.

SUNYIT Foundation

Alumni and friends established the Institute of Technology Foundation at Utica/Rome, Inc. to help preserve and improve the unique features of SUNYIT’s educational programs.

Chartered in 1974, the Institute of Technology Foundation at Utica/Rome, Inc. is a not-for-profit corporation, organized under New York State law and granted tax-exempt status by the Internal Revenue Service. The Foundation promotes, receives, invests, and disburses private gifts to SUNYIT. It exists solely to benefit SUNYIT and its students by providing financial assistance to students in the form of emergency student loans, scholarships, assistantships, and supplemental employment opportunities. It also enhances the learning environment through faculty research stipends, the acquisition of much needed equipment, and other purposes as may be directed by the board of trustees.

The Foundation is comprised of representatives of the local community, alumni, the college council, administration, faculty, staff, and the student body. A board of trustees manages the Foundation’s property, business affairs and concerns.

The Institute of Technology Foundation plays an integral role in securing SUNYIT’s fiscal stability while strengthening the academic, cultural, and research capabilities of SUNYIT and the community. The Foundation also contributes to the economic development of the Mohawk Valley.

Release of Student Information and Photographs

The public affairs office routinely prepares news releases identifying students who have been accepted to SUNYIT, students named to the President’s and Deans’ lists, students who participate in regularly scheduled activities, and those who will graduate. In addition, feature stories are developed from time to time regarding special activities and noteworthy events.

Students not wishing to have their names appear in news releases may contact the director of public affairs, ext. 7113.

Photographs of students, faculty and staff taken on campus may be used to illustrate official college publications and advertisements. Students who wish to restrict the release of directory information and/or photographs should follow procedures outlined in the Student Handbook or contact the director of public affairs, ext. 7113.

“Directory information” is designated as the student’s name, parent’s name, address, telephone number, date and
place of birth, major field of study, full- or part-time status, participation in officially recognized activities and sports, weight and height of members of athletic teams, dates of attendance, degrees and awards received, most recent previous school attended, e-mail address, and photograph.

**Student Rights and Responsibilities**

Students at SUNYIT are expected to conduct themselves in a manner which will not infringe on the freedom of others in the campus community, or bring discredit to themselves, SUNYIT, or to other students. Students are expected to know the code of conduct and other processes and procedures as outlined in the student handbook. Students who violate specified standards of good conduct may be subject to discipline in accordance with appropriate due process.

**Student Records**

The SUNYIT policy on access to and release of student records conforms to Public Law, Family Educational and Privacy Act of 1974 (refer to the “Student Handbook”).

**Affirmative Action/Equal Opportunity Policy**

Consistent with the policy of the State University of New York, SUNYIT does not discriminate on the basis of race, sex, color, creed, age, national origin, disability, marital status, status as a disabled veteran, veteran of the Vietnam Era, recruitment of students, recruitment and employment of faculty and staff, or the operation of any of its programs and activities as specified by federal and state laws and regulations.

Additionally, discrimination on the basis of sexual orientation and the provision of any services or benefits by state agencies and in any matter relating to employment is prohibited by the Governor’s Executive Order No. 28. The Policies of the State University of New York Board of Trustees also require that personal preferences of individuals which are unrelated to performance, such as sexual orientation, shall provide no basis for judgment of such individuals.

The Associate Vice President for Human Resources is designated coordinator in SUNYIT’s continuing compliance with relevant federal and state laws and regulations with respect to non-discrimination. The Associate Vice President for Human Resources may be consulted during regular business hours in Kunsela Hall, or by calling (315) 792-7191. Questions concerning Section 504 of the Rehabilitation Act of 1973, as amended, should be directed to the 504 Coordinator in the student activities office in the Campus Center, or by calling (315) 792-7530.

**Servicemembers Opportunity Colleges**

SUNYIT has been designated an institutional member of Servicemembers Opportunity Colleges (SOC), a group of over 400 colleges and universities providing voluntary postsecondary education to members of the military throughout the world. As a SOC member, SUNYIT recognizes the unique nature of the military lifestyle and has committed itself to easing the transfer of relevant course credits, providing flexible academic residency requirements, and crediting learning from appropriate military training and experiences. SOC has been developed jointly by educational representa-

tives of each of the Armed Services, the Office of the Secretary of Defense, and a consortium of 13 leading national higher education associations. It is sponsored by the American Association of State Colleges and Universities (AASCU) and the American Association of Community and Junior Colleges (AACJC).

**Academic Programs—HEGIS Code**

The Higher Education General Information System (HEGIS) Taxonomy is a nationally accepted classification scheme for assuring consistency in the curriculum content of courses leading to a degree within a given HEGIS discipline category. Thus, the concept of “information science” is the same for the person studying for a degree in computer and information science, classification number 0701, whether the degree is pursued at SUNYIT or at another institution. Enrollment in other than the following registered, or otherwise approved, programs may jeopardize eligibility for certain student aid awards.

**HEGIS Classification**

SUNYIT Undergraduate Catalog 2011-2013
Courses

The courses described in this catalog are expected to be taught within the 2011-2013 academic years. SUNYIT reserves the right to cancel any course when the enrollment is insufficient to support it. The right is also reserved not to offer a course if resources become unavailable, or if the course has been dropped from the curriculum since the last printing of the catalog.

SUNYIT also reserves the right to change faculty assignments, and therefore cannot guarantee students the faculty of their choice.

For additional information, contact the Registrar's Office, SUNY Institute of Technology, 100 Seymour Road, Utica, New York 13502. Telephone 315-792-7265.

Courses approved to meet the new General Education requirements are so noted at the end of the course description. Students using old general education requirements should confer with either their advisor or the Registrar's Office for applicable courses.

Accounting

ACC 201 Introduction to Financial Accounting (4)
An accelerated introduction to accounting theory, including the nature and need for accounting principles and accounting concepts. Coverage includes financial statement preparation and analysis, internal control, and accounting systems.

ACC 205 Managerial Accounting (4)
Controller use of accounting data to assist with decisions on budgeting, factor and product combinations, pricing, and for performance evaluation of segments of the firm. Prerequisites: ACC 201, MAT 111 or equivalents, or permission of instructor.

ACC 310 Income Tax I (4)
Analysis of federal income tax legislation and IRS interpretations affecting individuals' returns. This includes analysis of accounting methods used to determine gross income, deductions, capital gains/losses, and business income. Also includes instruction on availability and use of tax services. Prerequisite: ACC 201 or equivalent.

ACC 311 Income Tax II (4)
Impact of federal tax legislation and IRS regulation on taxation of corporations, partnerships, estates and trusts. Special attention is given to capital gains/losses, normal tax and surtax, income and deductions of domestic and international/multi-national organizations. Prerequisite: ACC 310 or equivalent.

ACC 312 Accounting Systems & Computer Applications (3)
Introduces students to topics in the area of accounting information systems. In addition to gaining exposure to commercially used accounting packages, students will gain an understanding of system documentation techniques including data flow diagrams, flowcharting, and E-R diagrams; internal control design and assessment; database design; information acquisition; and transactional accounting systems and accounting cycles. Prerequisite: ACC 201 or equivalent and computer literacy.

ACC 320 Accounting for Not-for-Profit Organizations (3)
Accounting principles and procedures as applied to not-for-profit entities. Accounting and financial management procedures for governments, health facilities, educational institutions, and charitable organizations. Prerequisite: ACC 201.

ACC 370 Cost Accounting (3)
Cost accounting and related analytical concepts. Topics include cost accumulation, variance analysis, joint costs, and standard costing. Prerequisite: ACC 201 or equivalent.

ACC 385 Intermediate Accounting I (4)
An advanced theory course in accounting, including problems in corporation accounting, evaluation of items on the balance sheet, and statement of income. The course emphasizes the opinions, statements, and other current publications of the American Institute of Certified Public Accountants and the Financial Accounting Standards Board. Prerequisite: ACC 201 or equivalent.

ACC 386 Intermediate Accounting II (4)
Continuation of Intermediate Accounting I. Topics include Stockholder's Equity and more complex accounting topics, including accounting for pensions, leases and income taxes, and the Statement of Cash Flows. Prerequisite: ACC 385 or equivalent.

ACC 430 Financial Management for Health Care Organizations (3)
Students will acquire a working knowledge of cash flow projections, budgeting, cost accounting and control and evaluation techniques for not-for-profit organizations. Case study analysis and presentations will be the primary instructional method. Students will learn to use an electronic spreadsheet to assist in analyzing case studies. Cross listed with HSM 435. Prerequisite: ACC 201 or equivalent.

ACC 450 Auditing (4)
Auditing standards and techniques used in audit engagements; preparation of audit working papers and audit reports. Prerequisite: ACC 386 or equivalent.

ACC 471 Advanced Management Accounting (3)
Students will learn techniques for budgeting, cost-volume-profit analysis, segment evaluation and analyzing operating constraints. They will research and develop solutions to various advanced management accounting problems through case studies and problems from the CMA Exam. Finally, the students will present their analysis and recommendations orally and in writing. Cross listed with ACC 571. Prerequisite: ACC 205 or ACC 370 or equivalent.

ACC 475 Advanced Accounting Problems (4)
Advanced accounting problems cover partnerships, home office and branch relationships, fiduciary accounting, governmental and institutional units, consolidated financial statements, corporate mergers and acquisitions, and other advanced problems. Prerequisite: ACC 386 or equivalent.

ACC 480 CPA Problems I (4)
To assist students preparing for careers in public accounting, emphasis is placed on analysis required in examinations preliminary to expressing a professional opinion as to fairness; includes examination procedures and methods of reporting results. Prerequisite: Permission of instructor. Cross listed with ACC 580.

ACC 491 Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

ACC 492 Accounting Internship (4)
Supervised, discipline related experience in a business organization. Emphasis is on application, process, and techniques used by business to sustain business and promote growth. Specific skills and competencies needed to be a successful decision-maker will be targeted. Oversight will be provided by the School internship coordinator and the sponsoring organization. Periodic meetings with the supervisor, mid-semester evaluation, and a final, comprehensive written report are required. Prerequisite: Permission of instructor.
Anthropology

ANT 301  General Anthropology (4)
Examines the general characteristics of a holistic cultural approach. Presents a general theory of human cultural development. Places specific anthropological issues, such as the origin of gender roles, inequality, and the nature of the state, in theoretical and cross-cultural perspective. Integrates data from cultural anthropology, linguistics, biological anthropology, archaeology, and applied anthropology research and practices where appropriate. Designed for upper division students with no previous background in anthropology. Meets new General Education Social Science requirement.

ANT 303  Cultural Diversity (4)
Examines the nature of social and cultural systems of diversity. Investigates cultural practices relevant to the constitution of such social constructs as race, class, gender and sexuality. Emphasizes the processes through which such ideas, products and culturally and historically constructed social worlds, become parts of a taken-for-granted social universe. Integrates the relationship between conceptions of race, class and gender and sociological and anthropological practice. Meets new General Education Social Science requirement.

ANT 310  Introduction to Cultural Anthropology (4)
Provides an understanding of contemporary human issues through the study of diverse human cultures, with an emphasis on non-Western societies and practices. Basic concepts and ethnographic techniques practiced by cultural anthropologist are presented. Topics include family, language, kinship, health, gender, economics, politics, ecology, art and religion. Examination of issues such as globalization and the study of online communities and cultures.

ANT 320  Social Policy (4)
Examines various attempts to apply social science knowledge to address social problems and bring about appropriate change in human behavior. Explores the process by which social policy is developed and implemented. Examples taken from both the United States and other cultures. Among possible topics are social service, needs assessment, health and healing, work, education, and technological change. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.

ANT 321  Distinction: Race, Class and Gender (4)
Examines the nature of social and cultural systems of distinction. Investigates cultural practices relevant to the constitution of such social constructs as race, class, gender and sexuality. Emphasizes the processes through which such ideas, products of culturally and historically constructed social worlds, become parts of a taken-for-granted social universe. Integrates the relationship between conceptions of race, class and gender and sociological and anthropological practice. Prerequisite: ANT 301 or SOC 110, or an introductory anthropology or sociology course. Restricted to Sociology and Criminal Justice majors.

ANT 371  People and Systems: Cultural Perspectives on Information Practice (4)
Presents the general concepts essential to a cultural perspective on information practice, including awareness of how information activities are mediated by cultural constructs and are developed within pre-existing socio-technical frameworks. Examines the results of research and reflection from a variety of relevant fields which document and illuminate the social and cultural dimensions of the evolving cyberspace and information applications like system development. Illustrates how to combine these results and reflections into analyses of why systems succeed or fail and how to incorporate into system development work specific tools which increase the likelihood of system success like participatory design. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.

ANT 382  Cultures, Health and Healing (4)
Presents the essential elements of a cultural perspective through examination of health and illness-related behavior. Places disease and illness in holistic perspective. Explores specific issues in medical anthropology, such as the way various cultures conceive disease and illness, cross-cultural conflict in health care delivery, industrial and non-industrial approaches to therapeutic intervention, the relationship of disease and human evolution, and alternative approaches to the study of such issues. Assumes no previous study in anthropology, although this would be helpful. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.

ANT 460  Ethnography (4)
Provides an intensive survey of ethnographic practice in anthropology, sociology, and other fields. Examines a wide range of ethnographic materials focusing on the actual production of ethnographic materials including the use of “participant observation,” the collection and making of the ethnographic text, questions of ethics in field work practice, and recent relevant feminist and postmodern discussions. Provides students' with the skills and information required in fieldwork practice. Covers specific projects that require students to generate primary field data and complete an analysis of this data using one or several of the theoretical perspectives covered during the semester. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course. Cross listed with ANT 531.

ANT 490  Selected Topics in Anthropology (4)
An in-depth treatment of a selected topic in Anthropology. Provides students with the opportunity to investigate Anthropological subject matter that will not be repeated in a future seminar. Prerequisites: ANT 301 or SOC 110 or an introductory anthropology or sociology course.

ANT 491  Independent Study (Variable Credit 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisite: Matriculated student only, permission of instructor and dean of subject area.

Art

ART 120  Studio Art: Visual and/or Performing (2)
An introduction and hands-on experience with the style and techniques of a visiting artist. Suitable lecture/demonstration of background and personal approach to the work will be shared by the artist. Students in a studio/workshop type of environment will participate in sequential exercises designed to allow them adopt and adapt some of those stylistic elements and/or features in their own work (visual and/or performing). Meets new General Education Arts requirement.

ART 135  Drawing (2)
This is a beginning course in free-hand drawing for the layperson. The student will be guided through a sequence of lessons beginning with line quality, the vocabulary of lines, and proceed through drawing materials and techniques, foreshortening and shading. Emphasis will be placed on the representation of forms in drawing. Lessons will consist of lecture-demonstrations, class work, and homework. The expected result is to provide the student with more confidence in the self-expression and appreciation of drawing. Meets new General Education Arts requirement.

ART 140  Painting - Technique & Style (4)
An investigation of visual art forms and techniques that influence and express qualities of American culture. Aspects of design, color and style will be explored through studio experience, lecture, slides, and demonstrations, to enable the student to use the elements of line and color to create visual space on a flat surface. Meets new General Education Arts requirement.

ART 210  Principles of Two Dimensional Design (4)
A foundation studio course focusing on the visual dynamics of the two-dimensional picture plane, with special attention on the application of basic design principles to problem-solving in the fine and applied arts. Explores a variety of hands-on techniques pertaining to image creation, manipulation, and construction including space, line, shape, value, texture, color, and their design relation to one another. Combining technical and artistic skills, students will create 5-10 portfolio pieces. It is...
strongly recommended that students have taken or are taking concurrently a studio drawing course. Meets new General Education Arts requirement.

ART 341  Painting II - Techniques & Style (2)
Continuation of the investigation of visual art forms and techniques for students who wish to improve visual literacy. Students will explore several major styles in the modern Western tradition, applying and experimenting with the brush and pigment techniques through which those styles are achieved. Meets new General Education Arts requirement.

ART 350  History of American Art (4)
A survey of important trends and significant styles of American painting and sculpture from colonial times, including works of Sargent, Whistler, Homer, Inness, Johns, and Pollock. Lectures, slides, and museum tours. Meets new General Education Humanities or Arts requirement.

Astronomy

AST 222  Astronomy (4)
A survey of the nature of celestial bodies within the solar system, as well as constellations and phenomena in and beyond our galaxy. Also covered are comets, meteoroids, asteroids, black holes, quasars, pulsars, supernovae, star clusters, and double stars. Meets new General Education Natural Sciences requirement, but does not meet the SUNYIT laboratory science requirement.

Biology

BIO 101  Introduction to Biology (4)
Biological issues are at the forefront of public attention, from cloning to climate change to conservation, and understanding these issues takes an increasing amount of scientific literacy as the issues become more complex. Covers the scientific knowledge base behind many of these issues, and also explores current areas of agreement and contention and applications of these data in technology and society. Meets new General Education Natural Science requirement or the SUNYIT Laboratory Science requirement.

BIO 103  Biology I (4)
First part of a two semester sequence of introductory biology. Focuses on chemistry of living organisms, cell structure and function, metabolic processes, genetics and evolution. The processes of observation, measurement, hypothesizing, data gathering and interpretation, analysis of data and application are stressed in laboratory each week. Meets new General Education Natural Science requirement or the SUNYIT Laboratory Science requirement.

BIO 104  Biology II (4)
Second part of a two semester sequence of introductory biology. Focuses on the diversity, anatomy, and physiology of living organisms. The processes of observation, measurement, hypothesizing, data gathering and interpretation, analysis of data and application are stressed in laboratory. Three hours of lecture and three hours of laboratory each week. Prerequisite: BIO 103

BIO 105  Introduction to Ecology (4)
Study of interactions living organisms have with their physical and biological environments. Special attention is given to population dynamics, pollution control, and the consequences when ecological systems are disturbed. Meets new General Education Natural Science requirement, but does not meet the SUNYIT Laboratory Science requirement.

BIO 122  Insects and Society (4)
Examines the impact of insects on human society. Provides an overview of the biology and ecology of the major insect orders and addresses the influence of insects on history, beliefs, folklore, medicine, agriculture, art, music, literature, and the importance of insects in human well-being. Meets new General Education Natural Science requirement, but does not meet the SUNYIT Laboratory Science requirement.

BIO 130  Plant Biology (4)
Plants provide us with oxygen, food, and most of the raw materials we use; they form the very basis of life as we know it. Addresses current issues and technologies surrounding plants, including bioengineered food, botanical forensics, and the interaction of plants and climate change, and examines the structure, classification, and physiology of plants. Meets new General Education Natural Science requirement or SUNYIT Laboratory Science requirement.

BIO 215  Anatomy & Physiology I (4)
Covers the various systems of the human body. The first semester emphasizes the anatomy and physiology of cells, the integumentary, skeletal, muscular and nervous systems. Laboratory studies include the skeletal system using articulated and disarticulated human skeletons, tissues using prepared slides, and the nervous system using preserved specimens and physiological exercises. Three lecture hours and three laboratory hours per week. Prerequisites: BIO 101 and CHE 110 or permission of instructor. Meets the new General Education Natural Science requirement.

BIO 216  Anatomy & Physiology II (4)
Covers the various systems of the human body. The second semester emphasizes the anatomy and physiology of the autonomic nervous system, circulatory system, respiratory system, urinary system, acid-base balance, digestive system, endocrine system and reproductive system. Laboratory studies include the musculature of a cat, circulatory system, respiratory system, urinary system, digestive system and reproductive system. Dissections of a cat and cow hearts will be performed. Tissue studies will use prepared slides. Respiratory volumes will be measured and EKG's will be recorded using IWORX. Three lecture hours and three laboratory hours per week. Prerequisite: BIO 215. Meets the new General Education Natural Science requirement.

BIO 222  Nutrition and Health (4)
Examines the nature of nutrients, their metabolism and physiological function, and the factors that may influence the degrees to which these nutrients are required for healthy functioning. Nutritional health issues and the influence of drugs and environmental factors on nutrition and health will be emphasized. Meets new General Education Natural Science requirement.

BIO 224  Biology of Aging (4)
Introduces biological concepts with emphasis on the process of aging. Topics include demographics, concepts of aging, anatomy and physiology as well as general non-medical assessments of the elderly. Students cannot receive credit for both BIO 350 (Advanced Physiology) and BIO 305. Meets new General Education Natural Science requirement.

BIO 225  Biology of the Sexes (4)
Examines the genetic and physiological basis of male and female differentiation in different organisms, the evolution of reproduction as a genetic strategy, physical differences of the sexes and parenting in mammals. Addresses how societal constructs of gender have influenced the development of theories in various scientific disciplines and the roles of gender for scientists. Meets new General Education Natural Science requirement, but does not meet the SUNYIT Laboratory Science requirement.

BIO 230  Plant Anatomy (4)
In-depth examination of the internal organization of plants, particularly angiosperms, with an emphasis on understanding anatomy from a structure-function standpoint. Three hours of lecture and three hours of laboratory each week. Prerequisites: BIO 104

BIO 235  Introduction of Mycology (4)
Designed as a survey of the kingdom Fungi. Emphasizes the systematics of the fungi, their physiology and development, and their applications and interactions in the ecosystem and with humans. Three hours of lecture and three hours of laboratory each week. Prerequisites: BIO 104.
BIO 270  Cell Biology (4)  Survey of modern cell biology which includes the chemistry of cellular molecules, structure, functions, and specializations of cells and organelles. Four hours of lecture each week. Prerequisites: BIO 104

BIO 275  Microbiology (4)  Covers the fundamentals of microbiology including the study of bacteria, viruses, fungi, algae, and protozoa as well as microbial structure, metabolism, culturing, control and genetics. Basic laboratory skills and microscopy techniques are also included. Three hours of lecture and three hours of laboratory per week. Prerequisites: BIO 101 and CHE 110 or permission of instructor.

BIO 300  Ecology (4)  Covers interactions at the organismal, population (single species and species interactions), and community level. Applications of ecological theory to current environmental problems are examined throughout the course. Emphasis in the laboratory and field exercises will be placed on ecological methodology and the application of these methods. Students will be required to use various statistical methods to analyze and interpret the data. Each exercise will require a report in the format of a scientific paper. Three hours of lecture and three hours of laboratory each week. Prerequisite: BIO 104. Co-requisite: STA 225 or MAT 225

BIO 310  Evolution (4)  Introduction to evolutionary theory. Includes the historical development of components of evolutionary theory, population level microevolution, the fossil record and macroevolution, and current methods in evolutionary research including their application to genetic engineering. Meets new General Education Natural Science requirement, but does not meet the SUNYIT Laboratory Science requirement.

BIO 315  Plant/Animal Physiology (4)  Examines functional responses of organisms such as photosynthesis, water relations, movement, hormones, and growth in plants and, in animals, the nervous, endocrine, circulatory, respiratory, digestive, and reproductive systems. Four hours of lecture each week. Prerequisite: BIO 270.

BIO 320  Entomology (4)  Designed to familiarize students with the anatomy, physiology, and ecology of insects. Provides the necessary background for advanced courses in entomology and pest control. Laboratory focuses on sampling, specimen preparation, and recognizing different insect families using morphological features. Insect collection required. Three hours of lecture and three hours of laboratory each week. Prerequisite: BIO 104.

BIO 322  Integrated Pest Management (4)  Examines the basics of applied entomology and pest management. Covers basic insect biology and identification, as well as the theory and practice of pest management. Topics discussed include issues such as management tactics, sampling, thresholds, pesticide properties, biological control, and environmental risk. Four hours of lecture each week. Prerequisite: BIO 320.

BIO 331  Comparative Plant Morphology (4)  Examines the external organization of plants as well as the evolution of major plant groups as evidenced through the fossil record and comparison of homologous structure. Assumes general botanical knowledge. Three hours of lecture and three hours of laboratory each week. Prerequisites: BIO 104; plant anatomy (BIO 230) is encouraged as a prerequisite or co-requisite.

BIO 340  Vertebrate Zoology (4)  Focuses on the biology, ecology, taxonomy and comparative anatomy of animals within the vertebrates. Students will have “hands-on” experience with live and preserved specimens in the field and laboratory. Three hours of lecture and three hours of laboratory each week. Prerequisites: BIO 104.

BIO 341  Invertebrate Zoology (4)  Focuses on the biology, ecology, taxonomy and comparative anatomy of animals within the invertebrate phylum. Students will have “hands-on” experience with live and preserved specimens in the field and laboratory. Three hours of lecture and three hours of laboratory each week. Prerequisites: BIO 104.

BIO 342  Animal Behavior (4)  Biological study of vertebrate and invertebrate animal behavior. Basic topics covered include animal learning, mechanisms of behavior, foraging, competition, defense against predation, aggression, sensory systems, communication, mating systems and parental care behavior. Four hours of lecture per week. Prerequisites: BIO 104.

BIO 350  Advanced Physiology (4)  An integrated study of human physiology at the biochemical, cellular, tissue, and organ level. Designed primarily for upper division science and nursing majors. Emphasis will be on explanation of biochemical and cellular mechanism in the major organ systems of the human body. Prerequisite: BIO 216 or permission of instructor. Does not meet the SUNYIT Laboratory Science requirement.

BIO 351  Genetics (4)  A broad coverage of the field of genetics to include discussion of the transmission, chemical nature and function of genetic material, with special attention to its importance in medicine, agriculture, and other aspects of human life and culture.

BIO 390  Junior Seminar (1)  Introduction to the general principles and procedures of scientific research with emphasis on the use of scientific literature and methods of research. Seminar, 1 hour each week. Prerequisite: Junior status.

BIO 401  Phylogenetics (4)  Introduces students to methodologies of reconstruction evolutionary history. The history of various approaches is covered as well as current and emerging philosophical debates in the field. Modern methods utilizing computational analysis will be taught along with specific issues regarding different types of data. Prerequisites: BIO 270, BIO 351, BIO 380

BIO 430  Plant Systematics (4)  Serves as an introduction to the field of systematics as well as an in-depth study of the classification of flowering plants. Assumes general botanical knowledge. Three hours of lecture and three hours of laboratory each week. Prerequisite: BIO 104. Students are encouraged to take one other plant course (BIO 230, BIO 315, or BIO 331) before or in conjunction with this class.

BIO 460  Biotechnology (4)  Upper level biology majors course that includes such topics as: history, future, process and methods used in biotechnology, substances and products produced through biotechnology, the application of biotechnology, forensics, industry, energy production, pollution abatement and the environment as well as issues such as ethics, regulation, safety and public perception. Three hours of lecture and three hours of laboratory per week. Prerequisite: Molecular biology course or BIO 470.

BIO 470  Molecular Biology (4)  Modern molecular biology with an emphasis on gene structure and activity and the biochemistry related to the understanding of the function of the gene. Three hours of lecture and three hours of laboratory each week. Prerequisites: BIO 104, BIO 270

BIO 475  Bioinformatics (4)  Introduction for understanding how genomic sequence and its variations affect phenotypes. Will focus on the information available from DNA sequencing projects, ranging from the sequences of individual genes to those of entire genomes. Students will learn analytical techniques that can be used to evaluate sequence data, and examples of the biological significance of such analysis. Prerequisites: BIO 270, BIO 380, BIO 470

BIO 487  Senior Life Science Seminar (1)  A capstone seminar focusing on life science research conducted by seniors and faculty. Seminar, 1 hour each week. Prerequisites: BIO 390 and Senior status

BIO 488  Senior Bioinformatics Seminar (1)  Capstone seminar focusing on bioinformatics research conducted by seniors and faculty. Seminar, 1 hour each week. Prerequisites: BIO 390 and Senior status.
BIO 489  **Senior Biotechnology Seminar (1)**
Capstone seminar focusing on biotechnology research conducted by seniors and faculty. Seminar, 1 hour each week. Prerequisites: BIO 390 and Senior status.

**Business**

**BUS 101  Introduction to Business (4)**
A survey course that will provide an introduction to current business practices in a changing global economy. Includes an overview and introduction to the functional areas in American business such as accounting, finance, marketing, management, human resources, and production. Selected business topics will be covered to illustrate how the concepts, structures, and theories are related within business. Enrollment is restricted to freshmen/sophomore students or by permission of instructor.

**BUS 105  Business Law I (4)**
A case approach analysis of business transactions in the legal environment. Coverage includes: court structure and processes, contracts, sales, commercial paper, secured transactions, and property transactions. Related local, state, and federal statutes and forms are also considered.

**BUS 302  Web Analytics for Managers (2)**
Focuses on the methods and concepts that today's business managers can use to effectively manage their electronic commerce site activity. Through gaining a better understanding of web analytics, managers become better informed of their company's online activities, enabling them to improve their marketing, sales and profit results. Examines the various ways that web activity is measured and analyzed, including the metrics that provide the essential data for analysis and the technologies that are used to track and report web activity.

**BUS 306  Business Law II (3)**
Designed to extend the student's legal knowledge of business transactions by stressing issue recognition and case analysis. Topics covered include agency, property, suretyship, legal liability, bankruptcy, and business organization. Prerequisite: BUS 105.

**BUS 310  Principles of Insurance (4)**
Introduction to basic principles of life, health, property, liability, and other forms of insurance from the viewpoint of the purchaser. Emphasis will be on universal insurance concepts and not specific policy provisions. Consideration is given to the importance of risk in personal and business transitions and various methods of handling risk with emphasis on insurance.

**BUS 345  Real Estate Transaction (4)**
The principal purpose is to develop an understanding of the legal framework and basic principles that apply to real estate transactions. Residential and commercial real estate transactions will be examined in detail. Specific legal issues are presented in a problem-solving format and may include: introduction to real estate, recording statutes, title abstracting and title insurance, survey and legal descriptions, mortgages, leases, deeds of conveyance, settlements and closings and Real Estate Settlement Procedures Act.

**BUS 420  Employee Benefits (4)**
Concepts of group life, health, retirement, and emerging employer sponsored benefit plans. Emphasis is on plan design and management with special attention to cost funding, regulation and tax considerations. The impact of government programs such as Social Security on individual insurance and employee benefit programs and potential impact of proposals such as national health insurance. Prerequisite: MGT 318.

**BUS 451  Issues in Business and Society (4)**
Analysis of forces external to the firm which influence its goals, structure and operation. Includes legal and regulatory constraints, primarily as they reflect the philosophial backgrounds of free enterprise and managerial enterprise, and managerial enterprise viewpoints current in American business. Also, the social, political, and technological factors which influence managerial/non-managerial behavior in the firm, and the firm's impact on society. Actual cases influencing the firm or industry objectives, and the philosophy of private enterprise will dominate the subject matter.

**BUS 485  Management Policy (4)**
Emphasis is placed upon analysis of the factors upon which ultimate business decisions are made; construction and review of business plans, and business strategies in domestic and foreign operations under varying political, economic and legal constraints. Special attention is given to actual situation analysis. Current functional and managerial techniques are applied to a variety of case problems. Prerequisites: Senior status and completion of all business core requirements.

**BUS 491  Independent Study (Variable 1-4)**
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only; permission of instructor and dean of subject area.

**BUS 492  Business Internship (4)**
Supervised, discipline based experience in business organization. Emphasis on application, process, and techniques used by business to sustain and promote growth. Specific skills and competencies needed to be a successful decision-maker are targeted. Oversight provided by the School Internship coordinator and the sponsoring organization. Periodic meetings with the internship coordinator, mid-semester evaluation and a final, comprehensive written report are required. Pre-requisite: Permission of Instructor. Only S/U grades are awarded for this course.

**Chemistry**

**CHE 110  Essentials of Chemistry (4)**
An introduction to chemistry for non-majors. The course will cover some key topics in chemistry, with emphasis on its impact on society. Course includes three hours of lecture and three hours of laboratory per week. Meets new General Education Natural Science requirement or the SUNYIT laboratory science requirement.

**CHE 130  Introductory Chemistry I (4)**
First course in two semester sequence of the college-level introductory chemistry for students in the sciences or related technology programs. Topics include: measurements, forms of matter, stoichiometry, chemical reactions, gases, thermochemistry, atomic structure, structure of the periodic table, chemical bonding and molecular geometry, properties of solids and liquids, and properties of solutions. Three hours of lecture and three hours of laboratory per week. Prerequisite: one year of high school chemistry or equivalent.

**CHE 131  Introductory Chemistry II (4)**
Second course in a two semester sequence of college-level introductory chemistry for students in the sciences or related technology programs. Topics include: periodic patterns in the chemical table, organic compounds, chemical kinetics, equilibria, thermodynamics, electrochemistry, elemental occurrence in nature and usage in industry, coordination compounds and lastly, nuclear chemistry. Three hours of lecture and three hours of laboratory per week. Prerequisites:CHE 130 or equivalent.

**CHE 322  Organic Chemistry I (4)**
First course in two semester sequence. Topics include: Bonding and molecular orbital theory, structures of non-conjugated organic compounds, nomenclature, stereochemistry, basic organic reactions, structural determinations via infrared spectroscopy (IR), mass spectrometry (MS), and nuclear magnetic resonance spectroscopy (NMR) and basic synthetic approaches. Three hours of lecture and three hours of laboratory per week. Prerequisite: Chemistry 131 or equivalent.

**CHE 323  Organic Chemistry II (4)**
Second semester of a two semester sequence. Topics include: Conjugated and aromatic organic compounds, ultraviolet/visible spectroscopy, reactions of aromatic compounds, alcohols, thiols, ethers, epoxides,
sulfides, aldehydes, ketones, carboxylic acids, reactions of carbonyl compounds, aliphatic and aromatic amines, nomenclature, basic synthetic approaches and an introduction to biological molecules. Three hours of lecture and three hours of laboratory per week. Prerequisite: CHE 230 or equivalent.

**CHE 252 Instrumental Analysis (4)**
Analytical chemistry course that deals with chemical analysis utilizing electronic instrumentation. Topics include: infrared, Raman, atomic emission, atomic absorption, atomic fluorescence, NMR and mass spectrometry; electrochemical techniques such as ion selective electrodes, polarography, coulometry, amperometry, conductance; and chromatographic techniques such as gas, liquid column and HPLC. Three hours of lecture and three hours of laboratory each week. Prerequisite: CHE 231 or equivalent.

**CHE 433 Biochemistry I (4)**
First course in a two semester sequence. Topics include: Molecular components of the cell such as amino acids, proteins, enzymes, sugars, lipids, lipoproteins, nucleotides, vitamins and coenzymes. Also covered are energy yielding processes such as the ATP cycle, glycolysis, tricarboxylic acid cycle, the phosphogluconate pathway, redox enzymes and electron transport, oxidative phosphorylation, fatty acid metabolism, amino acid degradation and photosynthesis. Three hours of lecture and three hours of laboratory per week. Prerequisite: CHE 231 or equivalent.

**CHE 436 Biochemistry II (4)**
Second course in a two semester sequence. Topics include: synthesis of carbohydrates, lipids, amino acids and nucleotides, the conversion of biochemical energy into motility, membrane transport mechanisms, hormones and the regulation of metabolic processes, metabolic organization, the structure and properties of DNA, protein synthesis, genes and their regulation and systematic morphogenesis. Three hours of lecture and three hours of laboratory per week. Prerequisite: CHE 430 or equivalent.

**Chinese**

**CHI 101 Elementary Chinese (4)**
Designed for students with no previous knowledge of Chinese. Introduces students to the official Chinese language called “Mandarin” by English speakers, putonghua in the People’s Republic of China, and Kuo-yu in Taiwan. The course aims to help students obtain the four basic language skills of listening, speaking, reading and writing the Chinese language. Students will learn basic vocabulary and sentence structures for use in everyday life situations through various forms of oral practice. Pinyin (the most widely-used Chinese phonetic system) will be taught as a tool to learn the spoken language. Students will also learn Chinese characters. Approximately 200 words and expressions in both Pinyin and character forms will be taught. While linguistic aspects of the Chinese language are the primary focus, introduction to the social and cultural background of the language will also form an important part of the course. Meets the new General Education Foreign Language requirement.

**Civil Engineering Technology**

**CTC 101 Introduction to Engineering Technology (2)**
Required for all freshmen in Civil Engineering Technology. Topics include academic requirements, advisement, software packages, career opportunities, and project management. Additional topics include professional, ethical and social responsibilities; respect for diversity and a knowledge of contemporary professional, societal and global issues; and a commitment to quality, timeliness and continuous improvement. Cross listed with ITC/MT 101.

**CTC 162 Computer Aided Design (4)**
The use of AutoCAD software to develop geotechnical models for engineering technology applications. Blue print reading and basic drawing fundamentals. Basic geometric dimensioning and tolerancing. Introduction to the creation and visualization of three-dimensional models. Four hours of lecture per week. Laboratory activity will be substituted for lecture as appropriate. Cross-listed with MTC 162.

**CTC 218 Statics (2)**
Analysis of equivalent systems of forces, free body diagrams, equilibrium of particles and rigid bodies, centroids, friction, and forces in structures. Two hours of lecture per week, with laboratory work substituted for lecture as appropriate. Prerequisites: PHY 101 and MAT 120. Cross listed with MTC 218 and ITC 218.

**CTC 212 Microstation (2)**
Basics of CAD as applied to civil engineering technology using Microstation software for typical civil technology applications such as: structures design drawings, highway layouts, detailing, etc. One hour of lecture and two hours of laboratory per week. Prerequisite: Basic understanding of geometry and trigonometry.

**CTC 213 AutoCAD (2)**
A refresher course in the basics of AutoCAD as applied to civil engineering technology using AutoCAD software for typical civil technology applications such as: structural design drawings, highway layouts, etc. One hour of lecture and two hours of laboratory per week.

**CTC 215 Sustainable Energy Systems (2)**
An introduction to sustainable energy systems. Topics include solar energy, wind energy, wind energy, fuel cell technology, biomass energy, geothermal energy, clean coal technology, ocean energy, hydroelectric power, and nuclear power. Two hours of lecture per week. Cross-listed with ETC 215 and MTC 215.

**CTC 222 Strength of Materials (2)**
Effect of shape and composition on strength of materials. Moments of inertia, shear forces and bending moments in beams, torsion of shafts, thermal expansion, and pressure vessels. Two hours lecture per week, with laboratory work substituted for lecture as appropriate. Prerequisites: PHY 101 and MAT 120 and MTC 218. Cross listed with MTC 222.

**CTC 250 Elementary Surveying (4)**
Introductory course in surveying methods and theory. Topics will include land surveying, construction surveying, and route surveying. Three hours of lecture and two hours of laboratory per week.

**CTC 255 Soils and Foundations (4)**
An introduction to geotechnics and its application to problems in engineering design and construction. Topics will include soil properties, soil testing, compaction and stabilization, stress distribution in soil, soil shear strength and lateral earth pressure. The principles of soil mechanics will be applied to the design of foundations and retaining structures, and to the study of slope stability. Course consists of three hours of lecture and two hours of laboratory per week. Prerequisite: CTC 222.

**CTC 260 Hydrology (2)**
Introductory course in surface water hydrology. Topics include watershed delineation, unit hydrographs, IDF curves, time of concentration and routing. The rational and TR-55 methods will be used to determine peak flows.

**CTC 261 Hydraulics (2)**
Introductory course in applied hydraulics. Topics include fluid statics, buoyancy, open channel flow, conduit flow, culvert hydraulics and design, storm water systems. Prerequisite: CTC 218.

**CTC 275 Construction Methods (4)**
Provides students with an overview of the methods and materials used in the construction industry. It will look at the equipment, materials, and methods used to construct buildings and roads. The lab will focus on field trips and small building projects to give students a hands-on feel for the construction industry. Three hours of lecture and two hours of laboratory per week. Students may not receive credit for both CTC 375 and CTC 413 or CTC 414.
**Courses**

**CTC 301 Professionalism in the Work Place (2)**
Topics include lifelong learning; professional, ethical and social responsibilities; respect for diversity and a knowledge of contemporary professional, societal and global issues; and a commitment to quality, timeliness, and continuous improvement. Cross listed with ITC 301 and MTC 301.

**CTC 320 Structural Analysis (4)**
An investigation of the analysis of both determinate and indeterminate structures. Emphasis is placed on application of the principles of mechanics on the analysis of structural systems. Three hours of lecture and two hours of laboratory per week. Lab hours will be used for experiments and problem solving using computer applications. Prerequisite: CTC 218 and CTC 222 or equivalents.

**CTC 340 Transportation Analysis (4)**
Introductory course to Transportation Engineering. Topics include highway design, traffic analysis, capacity planning, and computer modeling. Three hours of lecture and two hours of laboratory per week. Pre/Corequisite: MAT 121.

**CTC 415 Construction Estimating and Scheduling (4)**
Teaches students the basic concepts of estimating and scheduling construction projects. Students will learn how to estimate quantities, determine project length, and determine labor and equipment needs. Group projects during lab times will allow students to gain practical experience. Three hours of lecture and two hours of laboratory per week. Students may not receive credit for both CTC 370 and CTC 415. Prerequisite: CTC 275 or equivalent or permission of instructor.

**CTC 422 Design of Steel Structures (4)**
The design of steel structures from conceptual design through the production of contract documents. Emphasis is placed on application of the AISI Code (Allowable Stress Design) and applicable building codes to steel structures using conventional and computer-aided methods. Course consists of three hours of lecture and two hours of laboratory per week. Prerequisite: CTC 320.

**CTC 424 Design of Concrete Structures (4)**
The design of reinforced concrete structures from conceptual design through the production of contract documents. Emphasis is placed on application of the ACI Code and applicable building codes to concrete structures using conventional and computer-aided methods. Course consists of three hours of lecture and two hours of laboratory per week. Prerequisite: CTC 320.

**CTC 430 Engineering Dynamics (4)**
Kinematics of particles and rigid bodies. Kinetics of particles and rigid bodies with translation, rotation and plane motion using the methods of force - mass - acceleration, work-energy, and impulse momentum. Three hours of lecture and two hours of laboratory per week. Prerequisite: CTC 430 and ITC 430. Prerequisite: CTC 218 or equivalent. Pre/ Corequisite: MAT 122 or equivalent.

**CTC 440 Highway Design (4)**
Course emphasizes the highway design process using conventional and computer methods. Industry standard design handbooks and software are used to complete a highway design project involving site planning, earthwork, geometric design, pavement design, cost estimating and project management. Three hours of lecture and two hours of laboratory per week. Prerequisites: Surveying and familiarity with CAD software.

**CTC 450 Water and Wastewater Systems (4)**
Topics include water quality, water supply systems, wastewater systems, solid waste management, and pollution control. Three hours of lecture and two hours of laboratory per week. Prerequisites: CTC 260 and CTC 261, or equivalent.

**CTC 465 Special Topics in Civil Technology (Variable 1-4)**
A study of a selected topic of interest to civil technologists which will enhance the student’s ability to practice in his/her profession.

**CTC 470 Construction Administration (4)**
Advanced course in the responsibilities and risk associated with project management within the construction industry. Subjects addressed relate to special problems encountered in construction and the management of those problems. Special emphasis is given to responsibilities, relationships between owners, contractors and labor, construction safety and construction contracts. Prerequisites: CTC 275 or permission of instructor.

**CTC 475 Economic Analysis in Technology (4)**
Methods for choosing between alternatives based on the time value of money. Replacement studies, depreciation and after-tax analysis, risk, uncertainty and sensitivity analysis. Prerequisite: MAT 121. Cross listed with ITC 475 and MTC 479.

**CTC 476 Finite Element Applications (4)**
Concepts of Finite Element Analysis and their applications. Analysis of determinate and indeterminate structures, bar, truss, plate, and shell elements. Condition of plane stress and plane strain. Model generation to include fluid flow, combined elements and automatic meshing. Extensive use of ALGOR software. Three hours of lecture and two hours of laboratory per week. Cross listed with MTC 476. Prerequisite: CTC 218, CTC 222, MAT 122 and a formal course in computing or permission of instructor.

**CTC 490 Capstone Design (3)**
Provides students with the opportunity to work as part of a multi-disciplinary Civil Engineering Technology design team. The course will consist of a design project with presentations and reports. Lectures in professional practice and teaming will augment the design project. Two hours of lecture and two hours of laboratory per week. Prerequisites: Senior standing and at least 2 of the following: CTC 422, CTC 424, CTC 340, CTC 440, CTC 415, CTC 470, or permission of instructor.

**CTC 491 Independent Study (Variable 1-4)**
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

**CTC 492 Internship/Co-Op Assignment (2 or 4)**
Provides part-time supervised experience in a professional atmosphere which supplements classroom instruction. Two written reports on the work experience and two supervisor’s evaluations required. One site visit or conference call planned. Required contact hours min. 150. Prerequisite: Permission of instructor. Pre/ elective: CANNOT be counted as a technical elective. Course is graded as satisfactory/unsatisfactory.

**Communication**

**COM 106 Introduction to Technical Communication (4)**
An introduction to the field of technical communication focusing on technical writing. Students will create technical documentation of a current project or concern on campus, usually in the form of a proposal for changes. The class is highly writing-intensive; students review and edit each other’s work in class. Restricted to Communication and Information Design.

**COM 206 Ethnographic Writing (4)**
Uses writing to explore cultures. Students will study the observation and research of human behavior and will do field writing, reflective writing, and formal reports. A semester-long ethnographic project, conducted by small teams, will be presented to the class. Prerequisite: ENG 101 or equivalent.

**COM 212 Digital Photography and Imaging (4)**
Explores concepts and techniques in electronic photography and imaging. The class will build and reinforce critical digital imaging skills such as image manipulation, light effects, scanning, color correction and special effects. Combines design theory and hands-on work, introducing students to basic aesthetic issues in photography and image manipulation and the
ethics and communication skills. Students will be trained in formal writing and will demand that students learn to not only make the distinction between good and mediocre writing but to formulate clear arguments that support their opinions. Assignments will cover the following types of writing: Hypertext, Web/Intranet writing, Video scripting, Non-linear creative writing, Weblog writing, Electronic literature, and Polymedia (digital environments that explore new ways to use language). Meets Upper Division Writing requirement.

COM 200 Business Communications (4)
A study of the principles of editing and their application to a wide variety of documents. Students will complete two major projects, one in copy editing and one in comprehensive editing. For both projects, students will work with documents and clients from off campus. Students edit many sample documents and review each other's work in class. Prerequisite: COM 306 or equivalent. Cross listed with POS 531.

COM 211 Public Relations Writing (4)
Designed to teach students the basic concepts of effective public relations writing and to give them a solid foundation in the use of multiple communication tools that are used in the public relations industry. The emphasis is on media techniques, preparation of materials, and the dissemination of them through appropriate channels. Meets Upper Division writing requirement.

COM 220 Information Design (4)
The impact of the mass media (television, radio, journalism, film) upon American society is well-documented. Emerging technologies (computer-mediated communication, cable video, satellite communications) will further change the ways in which we communicate. Through study of communication theory, survey of traditional and new media, and creation of original media projects, students will explore the relevance of the new technologies to their own disciplines. Meets new General Education Humanities requirement.

COM 230 Information Design (4)
Students will be exposed to the nature of visual language and how designers use and readers process such information. Theories and research that relate to visual communication will be covered. Students will analyze and evaluate selected readings and examples; and students will use modern desktop publishing techniques to design and produce printed material. Additionally, the theory of design of online material will be discussed with particular emphasis on publication of World Wide Web home pages. Projects will include home page design and publication. Concepts covered earlier in the course will be applied to computer screen design. Prerequisite: Knowledge of basic computer skills.

COM 240 Writing for New Media (4)
The ability to write clearly and elegantly is a difficult skill to acquire, especially when new media such as the web and/or video are added in the mix. COM 240 is a writing course that covers both the practice of creating well-written and engaging text in a traditional format, as well as the art of shaping words that can harmoniously co-exist with evolving media. Students will learn to write effectively, to connect with their own inner voice, and to translate this voice into powerful and effective writing. This course will also place a strong emphasis on peer editing and will demand that students learn to not only make the distinction between good and mediocre writing but to formulate clear arguments that support their opinions. Assignments will cover the following types of writing: Hypertext, Web/Intranet writing, Video scripting, Non-linear creative writing, Weblog writing, Electronic literature, and Polymedia (digital environments that explore new ways to use language). Meets Upper Division Writing requirement.

COM 280 Analytical & Research Writing (4)
Students pursue a research project of their own design, using primary sources. Statistical and theoretical sources are analyzed in class and used in the research essay. Students keep a research log and practice a variety of research methods. Meets Upper Division Writing requirement.

COM 300 Oral Communication (4)
Designed to train students' capacity for oral communication, this course emphasizes research, organization, and presentation of speeches which inform, persuade, and entertain. Delivery, style, and audience analysis will be stressed. Small group discussions will aid the students to interact with others, and to apply the theories and techniques of debating. Extemporaneous speeches are also required and evaluated by the group.

COM 301 Technical Editing (4)
A study of the principles of editing and their application to a wide variety of documents. Students will complete two major projects, one in copy editing and one in comprehensive editing. For both projects, students will work with documents and clients from off campus. Students edit many sample documents and review each other's work in class. Prerequisite: COM 306 or equivalent. Cross listed with POS 531.

COM 302 Presentational Speaking (4)
Students will submit a proposal and present a paper just as they would at a professional technical communication conference. Public speaking skills will be augmented with the latest graphic presentation skills and software. Students will research, write, and organize a talk to either persuade or inform an audience of technical communication professionals. This course is designated for technical communication majors; others on a space available basis. Students may not receive credit for both COM 302 and COM 300.

COM 303 Successful Library Research (1)
Research techniques for personal, professional, and academic life. Develop skills and strategies for using Library tools to find and evaluate information for use in the classroom, home and job. Librarians will lead hands-on demonstrations of indexes, databases and search engines.

COM 305 Foundations of Communication/ESL (4)
Designed as a precursor to the core communication courses 300 & 306, the course gives students with ESL needs an opportunity to develop the language skills necessary for a complete technical education. Covers research-based technical writing and also develops fundamental principles of effective oral communication and presentation. Purpose is to complement, not replace, other required communication courses. Eligibility to enroll will be determined by results of a placement test or by permission of the chairperson.

COM 306 Report Writing and Technical Communication (4)
Students will learn to communicate more effectively in a professional environment through ample practice with individual as well as group composed documents (i.e. memos, letters, instructions, proposals, and analytical reports) and the oral presentation of a formal report. Since the course is usually taught in a computer lab, word processing and computer graphics are used to enhance the reports. Meets Upper Division Writing requirement.
Courses

COM 342 Field and Studio Video Production (4)
Covers the fundamentals of basic video and audio production. The student develops skills necessary to serve on production crews and operate a digital video camera. Also covers the fundamentals of video production with emphasis on direction, and operation of associated field equipment, developing the various skills necessary to produce quality video.

COM 350 Visual Thinking and Online Documentation (4)
Teaches students to evaluate, design, and develop online information. Students design an online tutorial that addresses human-computer interface and design issues covered in the course. Meets Upper Division Writing requirement.

COM 353 Newswriting (4)
Provides an introduction to the field of journalism. Students will participate in a group discussion about the newswriting process, from story ideas and development through to a close review of the final product. Students will develop story ideas and write articles suitable for publication. Prerequisite: Any Upper Division writing course.

COM 354 Newspaper Production (2)
Designed to help students develop insight and a better understanding of the role that newspapers play in society while providing hands-on experience in the production of a student newspaper. Students will discuss and write about such issues as news judgment and the impact of the media on public attitudes, government programs, and politics. Student discussions and papers will reflect, in part, their experiences managing, designing, writing, editing, and laying out a university-based publication. They will also read and discuss relevant literature. Both traditional and electronic (Web) publishing will be discussed. May be taken twice for a maximum of 4 credits.

COM 360 Product Design and Testing (4)
The only way to judge the usefulness of a document product or interface in the marketplace is by usability testing. Students will study various evaluation methodologies and practice the basics of test design and analysis for hypothetical or real products. Students will refine testing methodology and administration, in addition to understanding the factors affecting information and product quality.

COM 380 Communication Theory (4)
Exposes students to a range of communication theories, including those allied to systems theory, rhetoric, linguistics, psychology, philosophy, and anthropology. Students will explore a single theorist/theoretical position in depth.

COM 400 Computer Software Documentation (4)
Explains how to write professional computer documentation, from writing a proposal, to gathering data, to designing a document and related visuals, to running a usability test on the material, to revising style and polishing the final reference. Discusses the nature of visual language and considers the utilization of modern desktop publishing techniques to develop communication ideas and transfer them onto the printed page. Student teams develop a software documentation package using the school's desktop publishing hardware and software. Meets Upper Division Writing requirement.

COM 410 Communication Research Methods (4)
Gives an overview of the communication research process and provides training in research methods. Considers theory, underlying logic, and various quantitative and qualitative tools. Students apply principles and strategies by designing, conducting, and reporting on preliminary communication research projects as time permits. Computers are used for statistical analysis of data. Prerequisites: Valid campus computer account and COM 306 or COM 308 or COM 400 or equivalent.

COM 411 Communicating on Computer Networks: Issues and Implications (4)
Examines the various facets of computer networks; their history, the reasons for their existence, their use, operation and design, collaborative issues, and concerns regarding copyright and intellectual property. Emphasis is placed on the nature of networks, how they can and will affect our world, and how they are best utilized. Although there will be hands-on training and use of the Internet throughout the semester, this is not a "tools" course on using the Internet. Rather, we will use our experiences on the network to write about and discuss the underlying social, political, legal, and educational aspects of networking. Students will become familiar with issues involved with networking as well as associated terminology and jargon.

COM 413 Digital Animation (4)
Using a mix of theoretical and practical assignments, students will develop an understanding of the conceptual issues regarding animation while also producing an animation project. Students will create a set of storyboards, a simple animation with images, graphics, sound and special effects, and produce a video on various media, including a Web site. Students are expected to have a basic understanding of computer operating systems and will be expected to learn computer animation software while in the course. The animation software will be determined by the instructor at the time the course is taught.

COM 414 Advanced Digital Graphic Design (4)
Designed to increase the student's ability to creatively design within the digital domain. Major topics include: essentials for successful digital design, color and color accuracy in the digital world, symmetric and asymmetric layout techniques, creative use of shapes and space, large file management techniques, theoretical and applied typography, professional production methods to increase workflow, and stereographic imagery. Prerequisite: Basic Photoshop knowledge.

COM 415 Writing About Imagery (4)
Offers students a framework for studying images composed of both text and visuals. Each serves a variety of purposes and will explore the relationship between writing (creative nonfiction, i.e., the essay) and imagery (photography, sculpture, advertising, commercials, documentaries, Web sites, films, etc.) in its critical, creative, and practical dimensions. Through critical reading, analysis, interpretation, inquiry, field exploration, and composition, students will explore more thoroughly how to "read" and understand visual texts, how to write about visual texts, how to compose with visuals, and how to make their own writing more visually effective. Prerequisites: COM 306 and COM 320.

COM 416 Advanced Digital Animation (4)
This course builds on the design, layout, and basic animation features learned in previous courses by adding more advanced interactivity and user input as well as development of more complex 3D-like imagery and storyline techniques. Where the previous course focuses on object-oriented directed imagery and sound, this course involves more advanced scripting techniques to develop a vocabulary of concepts, skills, and aesthetic practices for producing more meaningful animation. The course blends direct technical instruction — including programming in ActionScript and server-side file and scripting access — with narrative and aesthetic development and discussion with the goal of moving past linear animation to more evolving and interactive animation practices.

COM 417 Visual Identity and Branding (4)
A studio based course in visual communication and methods for developing a brand identity for an organization, product, or individual. Brand identity is the use of design to project a memorable and consistent graphic image of a company, services, corporations, institutions, organizations, or other groups. (Prerequisite: COM 320).

COM 418 New Media Theory and Digital Culture
Studies the meaning of “New Media” and its influence on culture. Through readings, discussions, analysis of cultural artifacts as well as a longer hands-on project, we will reveal the underlying ideas of our digital historical moment. As we analyze various modes of representation, we will investigate the impact electronic media have had on society and explore its implications for activities such as online learning and education. Using a series of readings by pioneers in new media theory, we will place our current 21st century culture in a larger framework of established theoretical perspectives.

COM 420 Web Site Design (4)
Provides instruction in various processes that involve innovation, planning, analysis, design, implementation, and promotion of Internet-
CET 102  Electric Circuits (4)
Units and definitions. Ohm’s Law and Kirchhoff’s Laws. Analysis of resistive circuits. Circuit analysis using superposition, nodal and mesh methods, Norton/Thévenin theorems, and current and voltage divider rules. Transient and sinusoidal steady state response of circuits containing resistors, capacitors, and inductors. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 101 or equivalent or permission of instructor. Cross listed with ETC 102

CET 103  Electronics I (4)
Introduction to semiconductors, conductors, and insulators. Analysis of transistors, diodes, and their related application in rectifier and amplifier circuits. Wave-form interpretation, AC-DC loadlines, biasing techniques, small signal amplifiers, and h parameters. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 102 or permission of instructor. All students who have an EET associate degree may not enroll in this course for credit. Cross listed with ETC 103.

CET 203  Electronics II (4)
Introduction to operational amplifier circuits incorporating feedback. Amplifier configurations, feedback amplifiers, applications of Op-Amps in analog computers, and active filters. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 103 or equivalent or permission of instructor. All students who have an EET associate degree may not enroll for this course for credit. Cross listed with ETC 203

CET 210  Digital Systems I (4)
Fundamentals and advanced concepts of digital logic. Boolean algebra and functions. Design and implementation of combinatorial and sequential logic, minimization techniques, number representation, basic binary arithmetic and finite state machines. Logic families and digital integrated circuits and use of CAD tools for logic design. Prerequisite: ETC 102 or equivalent or permission of instructor. All students who have an EET associate degree may not enroll in this course for credit. Cross listed with ETC 210 and ECE 251.

CET 265  Digital Systems II (4)
Study of Digital Systems Design using the Intel family of microprocessors and their peripheral support integrated circuits. Incorporate Intel assembly language to develop programs to run the Intel hardware. Devices studied include the 8255A PPI and 8251 PCI. Design and implementation of Intel hardware and software will be emphasized. Interfacing and testing of the computer’s internal buses using logic analyzers and other test equipment will also be included. Three hours of lecture and two hours of laboratory. Prerequisite: ETC 210 or equivalent. Cross listed with ETC 265.

CET 299  Quality Control and Workplace Issues (2)
To provide a broad educational understanding of the impact on engineering solutions in a global and societal context along with a knowledge of contemporary issues and career opportunities. Also, focus will be placed on the process controls necessary for the practice of electrical and computer engineering. Cross listed with ETC 299.

CET 342  Microprocessor and Embedded Systems Programming and Design (4)
Programming the microprocessor for embedded systems application. Includes an introduction to interfacing components and hardware of the microprocessor. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 110 or permission of instructor. No prior microprocessor background needed. Cross listed with CET 342 and ECE 252.

CET 416  Data Communication & Computer Network Technology (4)
The principles and techniques of data and computer communications are covered in detail in this course. Topics include principles of data transmissions, data encoding, digital communication techniques, transmission codes, error detection and correction, protocols, communication networks, interfacing and architecture. Three hours of lecture and two hours of laboratory per week. Cross listed with CET 416.

CET 423  Microprocessor Interfacing (4)
Analysis of microprocessor interfacing with operational hardware. Three
Courses

hours of lecture and two hours of laboratory per week. Prerequisites: ETC 110 or equivalent and ETC 342 or permission of instructor. Cross listed with ETC 429.

CET 429 Microprocessors, Microprogramming and Computer Architecture (4)
Design of microprocessor and computer central processing units. Stresses the architecture and microprogramming of the processor. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 110 or equivalent or permission of instructor. Cross listed with ETC 429.

CET 431 PC Integration and Maintenance (4)
This course stresses the architecture and design of personal computers and emphasizes the use of diagnostic hardware and software to evaluate PC systems in actual lab situations. Two hours of lecture and four hours of laboratory per week. Prerequisite: ETC 311 or ETC 342 or CS 220. Cross listed with ETC 431.

CET 444 Special Topics in Microprocessors/Digital (4)
Seminar on the state-of-the-art in microprocessor and digital techniques. Topics will vary as technology changes. May be taken more than once for credit provided topics are different. Prerequisite: ETC 110 or equivalent or permission of instructor. Cross listed with ETC 444.

Computer Science

CS 100 Introduction to Computing Seminar (4)
An introduction to computer information science and computer information systems to include topics such as: structure and organization of modern computers, data representation, abstraction, algorithmic thinking, problem solving, interaction with a computer without using a graphical user interface, operating system basics, and an introduction to programming.

CS 108 Computing Fundamentals (4)
Fundamental concepts of computing and programming. Topics include data types, control structures, functions, arrays, files, and the mechanics of running, testing, and debugging. The course also offers an introduction to the historical and social context of computing and an overview of computer science as a discipline. Course taught using the C programming language. Prerequisites: No programming or computer science experience is required.

CS 220 Computer Organization (4)
Introduces students to the organization and architecture of computer systems as a hierarchy of levels, beginning with the standard von Neumann model and then moving forward to more recent architectural concepts. Topics include digital logic, microprogramming, conventional machine and assembly language levels. Emphasis is given to those aspects of computer hardware that effect programming. Prerequisites: CS 108 and MAT 115.

CS 240 Data Structures and Algorithms (4)
Fundamental concepts of data structures and the algorithms that proceed from them. Topics include recursion, the underlying philosophy of object-oriented programming, fundamental data structures including stacks, queues, linked lists, hash tables, trees, and graphs. The basics of algorithmic analysis, and an introduction to the principles of language translation. Prerequisites: CS 108 and MAT 115.

CS 249 Object-Oriented Programming (4)
Problem-solving and program design using an object-oriented approach. Starts with a review of control structures and data types with emphasis on structured data types and array processing. It then moves on to introduce the object-oriented programming paradigm, focusing on the definition and use of classes along with the fundamentals of object-oriented design. Other topics include an overview of programming language principles, simple analysis of algorithms, basic searching and sorting techniques, and an introduction to software engineering issues. Prerequisite: CS 240.

CS 307 UNIX Programming Environment (4)
Promotes effective use of the UNIX programming environment. Topics include: text editor, file system, utility programs, pipe and filter paradigm, construction and use of regular expressions, shell language programming, internet, and interprocess communication.

CS 311 Data Analysis (2)
A hands-on introduction to data analysis using a microcomputer-based statistical package such as SPSS/PC. Topics include descriptive statistics, measures of association, and hypothesis testing. Emphasis is placed upon data collection, data organization and report generation. Prior coursework in statistics is helpful, but not required. May not be taken by students who have received credit for CSC 323.

CS 324 Introduction to Internet Tools in Windows (2)
A hands-on introduction to the use of software Internet tools in Windows environments and the concepts and perspective in computing and communications essential to using them effectively. Topics include the Windows interface and environment, and tools for browsing, editing and Site creation and maintenance available in the Windows environment. At the conclusion of the course, the student will have an understanding of computing communication environments and the ability to use Web software tools to construct, configure, and maintain a Web site.

CS 330 Operating Systems and Networking (4)
Integrates the fundamental concepts of operating systems and networking with the purpose of realizing workable models of modules and constructs. Topics include concurrency, synchronization, processes, threads, long and short term scheduling, memory management, I/O, file systems, device management and multimedia systems. Networking topics include basic network models, layered architectures, network hardware and standard protocols. Within this framework, client-server microkernel design is also presented. Prerequisites: CS 220 and CS 240.

CS 345 Logic Design (4)
A concentration on the digital logic level of computer organization. The theoretical and practical concepts covered include: Boolean algebra, simplification of Boolean functions, and analysis and synthesis of digital circuits with emphasis on mixed logic. The most common combinatorial and sequential integrated circuits, and algorithmic state machines are highlighted. Prerequisites: CS 220 and MAT 115.

CS 348 LISP Programming (2)
An intensive survey of the LISP programming language. Topics include: expressions, data types and representations, control structures, and input/output functions. Prerequisite: CS 240.

CS 350 Information and Knowledge Management (4)
The concept of information as a unifying theme. Investigates a range of issues in computer science, including database systems, artificial intelligence, human-computer interaction, multimedia systems, and data communication. Prerequisites: CS 240 and MAT 115.

CS 351 Web Development and Internet (4)
This course teaches students to install, configure and maintain an Internet/Intranet Web Server. Topics include: developing Web pages, Hypertext Markup Language (HTML), Common Gateway Interface (CGI) scripting, and displaying information on the Web via a Database Management System (DBMS). Prerequisites: CS 108 and CS 307.

CS 370 Software Engineering (4)
Combines a range of topics integral to the design, implementation, and testing of a medium-scale software system with the practical experience of implementing such a project as a member of a programmer team. In addition, this course includes discussions on professionalism and ethical responsibilities in software development and human-computer interaction. Prerequisites: CS 220 and CS 249.

CS 371 Software Engineering Projects (4)
This course offers the student an opportunity to participate in a non-trivial software engineering team project and to apply the concepts studied in CS 370. The following will be emphasized throughout the project: documentation of projects; different roles in a project; corporate, academic and military software development standards; specification and requirements documents; configuration, quality assurance, test, verification, integration plans; post-development software support. Prerequisite: CS 370.
CS 377  Introduction to the Theory of Computing (4)
Introduction to theoretical computer science. Topics include: automata, formal languages, Turing machines, recursive function theory, computational complexity, and program correctness. Prerequisites: CS 240 and MAT 115.

CS 381  Principles of Computer Security and Cryptography
Focuses on general principles of computer security and cryptography. Topics covered include threat trees, threat taxonomies, malware, common attacks, cryptographic principles, block ciphers, hash functions and public-key cryptography. Prerequisites: MAT 115 or MAT 413, CS 249 and CS 330.

CS 407  UNIX System Administration (4)
Topics will include: concepts involving system administration and maintenance procedures to facilitate normal system operation; technical details regarding problems that could result from operating system malfunction as well as threats to system security that are inherent in a multiprogramming environment; techniques and tools for hardware and software configuration management. Prerequisite: CS 307; Corequisite: CS 330.

CS 409  Software Project Management (4)
This course presents different techniques for managing software projects and technical staff and familiarizes the student with artifacts of project management. The topics to be covered include: user specification, project proposal, contracts, software cost models and estimation techniques; project planning; implementation management; project delivery. Prerequisite: CS 370.

CS 420  Numerical Computing (4)
Basic techniques of numerical computation. Topics include: computer arithmetic and error control, solution of non-linear algebraic equations including some non-linear optimization, polynomial interpolations including splines, curve fitting, integration, and an introduction to differential equations. Emphasis will be on non-formal settings with a view toward applications. Prerequisites: Calculus and proficiency in a high-level programming language.

CS 421  Computational Linear Algebra (4)
Computational aspects of linear algebra, including linear optimization models, are explored. Topics include: different algorithms for solution of sets of linear algebraic equations, eigenvalue problems, linear programming, clustering techniques, and software requirements. Prerequisites: CS 240 and MAT 340 or equivalent.

CS 431  Principles of Programming Languages (4)
This course fosters a disciplined approach to the design of programs. Through carefully chosen assignments, the need for certain data structures and programming language features is made apparent. Several different programming languages are used. Topics include: structured programming, functional programming, recursion, and string processing. Prerequisite: CS 240.

CS 441  Computer Systems Architecture (4)
After a higher level review of current mainframe architecture and operating systems, advanced architectures, proposed and implemented for parallel computation, will be considered. The second half of the course will survey techniques for modeling and assessing performance of computer systems and networks, with emphasis on probabilistic models. Prerequisites: MAT 225 and CS 220.

CS 445  UNIX Network Programming (4)
The course explores computer networks from the implementation and programming point of view. The network architecture and communication protocols studied by the class allow connection of heterogeneous systems in an environment that may be geographically distributed. Prerequisites: CS 240 and knowledge of UNIX and C.

CS 446  Local Area Network Architecture (4)
An intensive study of LAN architecture models for Computer Science students. Topics include: contention-free and contention-based models, hybrid nets, HSLANs, integrated voice/video/data models. Prerequisites: CS 220 and CS 330.

CS 450  Computer Graphics (4)
A conceptual and programmatic introduction to raster and vector graphics. Topics include: object-oriented graphics, application programming interfaces, hierarchical modeling, concepts of scene graphs, geometric transformations and transform groups, behaviors for animation and interaction, interactive tools for geometries and behaviors, classical application programming interfaces, web-related graphics technologies, and graphics file formats. Prerequisites: CS 240 and MAT 115.

CS 451  Distributed Systems (4)
A study of distributed protocol and software frameworks. Synchronous and asynchronous networks will be covered. Protocols for leader election and distributed consensus will be presented synchronous networks. Fault-tolerant protocols will be discussed for synchronous systems as well as their adaptability in asynchronous models. The use of shared memory and message passing as well as Byzantine failures will be discussed. Prerequisites: CS 240 and CS 330.

CS 454  System Simulation (4)
An introduction to the basic techniques of systems modeling and analysis through system simulation. Discrete and continuous system simulation models, use of various simulation packages and analysis of simulation output are included for consideration. Prerequisites: C, C++, or JAVA and senior status or permission of instructor.

CS 477  Algorithms (4)
How good is it? Is there a better algorithm to solve it? This course aims at developing a toolbox of algorithms for solving real problems that arise frequently in computer applications and the principles and techniques for determining their time and space requirements and efficiency. In addition, the general complexity spectrum is discussed to give students a grounding in intractability and unsolvability. Prerequisites: MAT 115 and CS 240.

CS 480  Compiler Design (4)
Basic concepts of formal languages and automata theory and their applications in compiler writing. Several practical parsing methods are discussed. Prerequisite: CS 240.

CS 489  Cooperative Work-Study in Computer Science (Variable 1-4)
Student will be employed by a cooperating firm or agency. Periodic progress reports will be required. The department will provide a list of cooperating employers, and the student will be required to interview for the position. Students are paid by the employer. Prerequisites: Limited to Computer Science majors who have completed core courses and secured departmental approval. Additional restrictions are on file with the department. Only S/U grades are awarded for this course.

CS 490  Selected Topics in Computer Science (Variable 1-4)
Coverage of a specialized computer science topic, of current interest but not adequately treated in regular course offerings. The topic may, for example, be the theoretical and programmatic study of a methodology for a class of computational problems, an introduction to a research area of computing, or an in-depth examination of the usage and internals of a software artifact or framework. The same topic will not be repeated for at least two years. Prerequisites: CS 240 and MAT 115.

CS 491  Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only; permission of instructor and dean of subject area.

CS 495  Artificial Intelligence (4)
An introduction to fundamental knowledge representation schemes and intelligent problem-solving techniques, and corresponding implementation software artifacts. Both symbol system and biology/society-based approaches are covered. Topics include: state space heuristic search, constraint satisfaction, classical logic, fuzzy logic, Bayesian techniques, connectionism, genetic algorithms, swarm and multi-agent intelligence, and planning. Prerequisites: CS 240 and MAT 115.
CS 498 Capstone Project (2)
Offeres students the opportunity to integrate their knowledge of computer science by completing a significant project. Periodic written and oral presentations are required. Most students will complete, report on, and present a project started while taking CS 370. Prerequisites: CS 330, CS 350, and CS 370.

CSC 300 Computer Systems and FORTRAN Programming (4)
Basic concepts of computer science and computer programming. An introduction to computer hardware and applications programming using FORTRAN. No prior knowledge of computers or computing expected. Computer Science or Computer Science majors will not receive Computer Science credit for this course.

CSC 301J Introduction to Computing and JAVA Programming (4)
Basic concepts of computing and computer programming are covered. An introduction to computing environments, the internet and applications programming using JAVA. No prior knowledge of computers or computing is expected. Course is for non-majors. Computer Information Science/Systems majors will not receive Computer Science credit for this course.

CSC 301V Introduction to Computing and Visual Basic Programming (4)
Basic concepts of Computing and programming with object orientation using Visual Basic. Course is intended for beginners. Computer Science and Computer Science majors will not receive credit for this course.

CSC 310 Computers and Society (2)
A half-semester course examining the impact of computers in contemporary society. Topics include: components of a computer system, uses of computers in various disciplines and professions, and problems of data security and privacy.

CSC 311B Word Processing (Windows) (1)
A hands-on introduction to word processing using Word for Windows or a similar Windows package. Topics include text entry, formatting, spell checking, search and replace, use of a thesaurus and grammar checker, printing, and merge printing. At the conclusion of this course, the student will have the skills necessary for the production of a term paper, resume, or similar prose document, and the ability to produce a customized form letter. Students who have received credit for CSC 311 or CSC 311A may not take this course. Only S/U grades are awarded for this course.

CSC 311C Spreadsheets I (1)
A hands-on introduction to spreadsheets. Topics include building, saving and printing a worksheet, simple formatting, functions, and sorting. At the conclusion of the course, the student should be able to design a spreadsheet for statistical or financial applications, and to answer what-if questions. Students who have received credit for CSC 311 or CSC 311A may not take this course. Only S/U grades are awarded for this course.

CSC 311D Spreadsheets II (1)
A hands-on course on advanced spreadsheet features. Topics include print enhancements (fonts, borders, shading, etc.), hiding parts of the spreadsheet, macros, spreadsheet graphing, spreadsheet database functions. Prerequisite: CSC 311C or equivalent. Only S/U grades are awarded for this course.

CSC 311E Microcomputer Database (1)
A hands-on introduction to the use of a microcomputer database using Microsoft Access or a similar product. Topics include database creation, data entry, sorting and report preparation, modification of the database structure, adding/deleting records, form and report generation. Only S/U grades are awarded for this course.

CSC 311F Presentation Graphics (1)
A hands-on introduction to presentation graphics using Powerpoint or a similar package. Topics include text charts, bar/line charts, pie charts, slide shows and transition effects, and output to disk, monochrome and color hard copy, overhead transparencies, 35mm film recorder and videotape. At the conclusion of the course, the student will have the skills necessary to use a presentation graphics package to communicate effectively employing a variety of media. Students who have received credit for CSC 312 may not take this course. Only S/U grades are awarded for this course.

CSC 311G Introduction to Desktop Publishing (1)
A hands-on introduction to the use of a desktop publishing package for the creation of flyers, posters, newsletters, and similar short publications. Topics include page layout, style sheets, text formatting, and image handling. Output to monochrome and color printers is covered. At the conclusion of this course, the student will be able to design and create a short publication. Prerequisite: Ability to use a word processing program, or CSC 311A, CSC 311B, or its equivalent. This course may not be taken by students who have received credit for CSC 312. Only S/U grades are awarded for this course.

CSC 317 Computer Systems and C/C++ Programming (4)
The basic concepts of computer science and computer programming are covered. Computer hardware and applications programming using C or C++ are also introduced. No prior knowledge of computers or computing is required. This course is intended for non-majors. Computer Science or Computer Science majors will not receive Computer Science credit for this course.

Computer Systems

IS 305 Application Programming with COBOL (4)
Problem solving, algorithm development, and application development using the COBOL programming language. Emphasizes user interface, calculations, data sorting, report writing, data manipulation, data validation, string operations, intrinsic functions, and file handling based on the structured/procedural paradigm. Programming tools that leverage the power of the COBOL programmer are included. Prerequisite: CS 240.

IS 310 Hardware and Network Infrastructure (4)
Conceptual and practical study of the computer hardware, connectivity devices, and other supporting artifacts that comprise enterprise information systems and external systems like the public Internet. Topics include: fundamental digital logic; common integrated chips and boards for computer organization; execution of processor instructions; device interfacing; peripheral devices; common abstractions for enabling software development; major functions of an operating system; common connectivity devices and their operation. Prerequisite: CS 108.

IS 315 Networking of Information Systems (4)
An integrated study of fundamental principles and representative technologies underlying computer and device networks. Topics include: key networking protocols and relevant implementation stacks; interconnection devices; sample distributed software frameworks; management issues in networking computers and peripherals; deployment requirements for distributed software applications; common tools for the management of networks and distributed software. Prerequisite: IS 310.

IS 320 Systems Analysis and Design (4)
Examines the process of logically developing information systems. Focuses on the analysis, planning, and logical design phases of the systems development life cycle that culminate in the specification of functional system requirements. Concentrates on methods, techniques, and tools used to determine information requirements and the documentation of these requirements in a thorough and unambiguous form. Topics include: data collection; risk and feasibility analysis; requirements analysis; process modeling; data modeling; prototyping; joint application development; rapid application development; structured walkthroughs; project management; presentations; report writing. Prerequisite: CS 240.

IS 324 SQL Programming (2)
Designed to develop SQL programming proficiency. Emphasis is placed on the Data Definition Language (DDL) and Data Manipulation Language (DML) of SQL. Upon completion, students should be able to write SQL statements which create, update, and maintain database tables as well as write SQL queries to manipulate data in database tables. Prerequisite: CS 108 or equivalent knowledge. Students may not receive degree credit for both IS 324 and IS 325.
COURSES

IS 325 Database Management Systems (4)
Introduction to fundamentals of database management systems, techniques for database design, and principles of database administration. Emphasizes data modeling, database design, database application development, and database management. Topics include conceptual models; logical models; normalization; query languages; architectures such as centralized, distributed and client/server; database integrity; database security; error recovery; and concurrency control. Prerequisite: CS 240.

IS 330 Decision Support and Intelligent Systems (4)
An introduction to the fundamentals of Decision Support Systems (DSS). Focuses on the logical aspects of data processing and analysis. Topics to be discussed include historical review of computerized decision support, DSS architecture. Data Warehouses, Online Analytical Processing (OLAP), and Data Mining. The student is introduced to the principles of Intelligent Systems with an emphasis on Expert Systems (ES) and Artificial Neural Networks (ANN). The organizational and business implications of decision support systems are reviewed. Prerequisite: CS 240.

IS 340 E-Commerce (4)
An introduction to the fundamentals of e-business and e-commerce. Topics to be discussed include e-business models, principles of electronic business transactions, Electronic Data Interchange (EDI), electronic checks, and digital cash. The student is introduced to the protocols of secure e-commerce including the basics of cryptography, digital signatures, Secure Sockets Layer (SSL), Secure Electronic Transaction Protocol (SET). The languages and e-commerce technologies to be discussed include Java, JavaScript, XML, intelligent agents, and networking protocols. Prerequisite: CS 240.

IS 469 Information Technology Project Management (4)
Enables students in the information technology area to understand project management principles for IT programs and be able to apply these principles to successfully manage IT projects. Covers the essentials of IT project management which include attributes of projects, project integration management, project scope, time, and cost management, project quality and risk management, human resources and communications management, and procuring IT projects and services from outside agencies. Includes individual and group assignments and activities, including a group case study, where students can apply what they have learned to real-life situations. Prerequisite: IS 320.

IS 470 Database Programming (4)
Provides rigorous coverage of database programming using the Structured Query Language (SQL) and SQL coupled with other programming languages. Topics include: database management systems (DBMS); data definition; data manipulation; data control; database administration; report generation; DBMS built in and programmer-created procedures, functions, packages, and triggers. Prerequisite: IS 325 or equivalent and SQL programming proficiency.

IS 490 Special Topics in Systems (Variable 1-4)
An in-depth treatment of a selected topic not normally treated extensively in other Information System courses. The subject matter covered in this course will not be repeated in a future semester.

IS 491 Independent Study/Information Systems (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean.

IS 495 Computer Information Systems Practicum (2)
Capstone course for Computer Information Systems (CIS) majors. Students form teams and each team spends an entire semester working to satisfy a set of requirements for a real-world organization. Teams will gain experience in all phases of the systems development life cycle (SDLC) and project management. Periodic written and oral presentations are required. Success requires student teams to work as a cohesive unit which draws upon components of the entire CIS curriculum. Prerequisites: IS 310, IS 320, and IS 325.

Criminal Justice

CJ 100 Scope and Method of Criminal Justice (4)
An introductory seminar primarily for first-year Criminal Justice students to introduce them to the breadth and process involved in the study of Criminal Justice, including identification, interpretation, and synthesis of professional research; appropriate forms of presentation; and the role of higher education in the field. Co-requisite: CJ 101 or consent of instructor.

CJ 101 Introduction to Criminal Justice (4)
Provides an overview of the field of criminal justice, including the history, theory, and structure of the criminal justice system, with an emphasis on substantive and procedural criminal law, policing, prosecution/defense, the courts, and institutional and community corrections.

CJ 201 Laws of Evidence (4)
Examines the theories and practices associated with substantive and procedural criminal law, focusing on issues of evidence obtained by the police, used by the prosecution, objected to by the defense, and interpreted by the courts. Prerequisite: CJ 101.

CJ 203 Criminal Law (4)
Examines both theory and practice associated with substantive and procedural criminal law, focusing on fundamental descriptions of crime, including crimes against persons, property, and public order. Prerequisite: CJ 101.

CJ 204 Ethics in Criminal Justice (4)
Introduces the Criminal Justice student to ethical decision making in the criminal justice system. Explores ethical dilemmas and challenges in policing, criminal courts and corrections, using both philosophical principles/theories and hands-on criminal justice issues and applications. Prerequisite: CJ 101.

CJ 310 (4)
Presents an overview of the sociological study of crime and criminal justice, primarily in the contemporary United States. Material is broken down into four major topics: 1.) types and categories of contemporary criminal behavior; 2.) myths and facts about contemporary crime patterns; 3.) theories about why crimes are committed; 4.) how known crimes are dealt with by the U.S. criminal justice system. Prerequisite: CJ 101.

CJ 332 Research Methods in Criminal Justice (4)
Provides experience in the design and implementation of social science research with an emphasis on Criminal Justice topics and settings. Topics covered include the philosophies of social science, development of theories and hypotheses, modes of observation, and methods of sampling. Students will conceptualize and design several research projects during the semester, and review and evaluate professional published literature.

CJ 333 Analysis and Reporting of Data (4)
Engages the theory and practice of data analysis and reporting, using both qualitative and quantitative data. Students will become familiar with common software packages used in the analysis of social scientific data, as well as the norms and expectations regarding the written presentation of research. Use of computers is required, though no prior experience is assumed. Prerequisite: CJ 332 and STA 100.

CJ 359 Sexual Offenders (4)
Introduces the criminal justice student to the causes and treatments of sexual offending behavior and the ways the criminal justice and mental health emerging issues of tracking monitoring persistent offenders. Prerequisite: CJ 101.

CJ 365 High Technology Crimes (4)
Examines the nature and scope of high technology crimes and the legal response to these activities, including the challenges of apprehension and prosecution. Topics include cell phone fraud, virus dissemination, hacking, Internet scams, on-line gambling, on-line pornography, securities fraud, and terrorism. Also examines developing trends in cyber-crime and cyber-law. Prerequisite: CJ 101.

SUNYIT Undergraduate Catalog 2011-2013
101
CJ 420  Police and Society (4)
Introduces the functions, roles, and services of the various policing agencies in the United States. This includes the history, development, and role of the police as a component of the justice system, with particular attention to the relationship of the police to community, society, and relate institutions of social control; societal control of the police as well as the influences of social change and urban decay and disorder on methods of policing.

CJ 450  Politics of Re-Entry (4)
Focuses on the demographics and dynamics of prisoner re-entry, i.e. the effects on individuals, families, and communities when former offenders are released from prison and attempt to integrate or be integrated into society. Has an applied and regional focus, with the goal of documenting the current status of prisoner re-entry in Central New York. Prerequisite: CJ 101; one 200- or 300-level CJ/SOC course.

CJ 490  Selected Topics in Criminal Justice (4)
Provides in-depth treatment of a selected topic in Criminal Justice. Investigates criminological/criminal justice subject matter outside of standard course offerings. Prerequisite: CJ 101; one 200- or 300-level CJ/SOC course.

CJ 491  Independent Study in Criminal Justice (1-4)
Provides a structure for extensive study and/or directed research (under faculty supervision) on a specific topic. The application form must include a description of the project, its duration, educational goals, method for evaluation, and suggested number of credits. Prerequisite: Matriculated students only; permission of instructor and school Dean required. Prerequisites: CJ 101 and one 200- or 300-level CJ course.

CJ 493  Senior Seminar in Criminal Justice (4)
Designed to be the capstone course for the CJ Program. Explores in depth a particular topic in criminology/criminal justice chosen by the instructor. Emphasizes critical analysis of current literature and the development of original projects by students. Prerequisite: CJ 101 and CJ 332.

Economics

ECO 110  Microeconomics (4)
An in-depth analysis of the operation of market forces in determining resource allocation in the private sector via the price system. Comprehensive theoretical models of the consumer, the producer, and market structure are developed. The student will become acquainted with the techniques whereby economists analyze, for purposes of public policy, such issues as environmental restrictions, public utility rate fixing and other price controls, commodity taxation, minimum wage laws, occupational licensing, and the economics of crime and punishment. Meets new General Education Social Science requirement.

ECO 112  Macroeconomics (4)
A study of both classical and modern theory focusing on the determination of national income, employment, and the rate of inflation. The major versions of the classical and Keynesian systems are developed, including a review of the consumption function and the behavior of investment. Specific modern problems, such as the effects of wage-price controls, the institutional difficulties surrounding monetary and fiscal policy-making, and the growth/no growth issue, are discussed.

ECO 330  Economics of Aging (4)
Covers a variety of economic problems related to aging, from the viewpoints of both the individual and society as a whole. The economic characteristics of older persons will be examined, including labor force participation, financial circumstances, consumption patterns, and health status. Major attention will be given to formal and informal economic security arrangements including individual saving programs, public and private pension systems, health insurance, and other legal and financial devices. Long-term projections of the aged population, and its impact on the American economy, will be reviewed. Meets new General Education Social Science requirement.

ECO 405  Economics of Health Care (3)
Provides and consumers of health care have historically been insulated from the classic economic market forces of supply and demand. However, recent and anticipated changes in health care financing and provider and consumer behaviors are expected to have profound effects on the supply and demand of health care. Examined in this course are: the products of health care, the demand for health care, the supply of health care, and government regulation and its influence on supply and demand. Cross listed with HSM 405.

ECO 425  Economics of the Environment (4)
An economic analysis of environmental protection. Topics include: the economic nature of environmental problems; a description of air, water, and land pollution; global environmental issues; the economics of natural resource use, conservation, and recycling; and an analysis of the history and evolution of environmental policies in the United States. Prerequisite: ECO 110 or equivalent.

ECO 450  Money and Banking (4)
A detailed examination of money, credit, and financial institutions, with emphasis on how the monetary system influences economic activity. Topics include: the nature and functions of money, the commercial banking system, non-bank financial institutions, the roles of the Federal Reserve System and the Treasury, monetary policy, and international money and banking. Prerequisite: ECO 112 or equivalent.

ECO 491  Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisite: Matriculated students only, permission of instructor and dean of subject area.

Electrical and Computer Engineering

ECE 251  Digital Logic Design (4)
Fundamental and advanced concepts of digital logic. Boolean algebra and functions. Design and implementation of combinatorial and sequential logic, minimization techniques, number representation, and basic binary arithmetic. Logic families and digital integrated circuits and use of CAD tools for logic design. Three hours of lecture and two hours of laboratory per week. Cross listed with ETC 251.

ECE 252  Computer Organization and Microprocessors (4)
Organization of computer systems: processor, memory, I/O organization, instruction encoding and addressing modes. Introduction to microprocessors and microcontrollers. Design of hardware and software for microprocessor applications. Assembly language programming. Microprocessor system case studies. Three hours of lecture and two hours of laboratory per week. Prerequisite: ECE 251. Cross listed with ETC 532.

ECE 260  Electric Circuits (4)

ECE 281  Electrical and Computer Engineering Seminar I (1)
Overview of the fields of electrical engineering and computer engineering. Various sub-fields within EE and CoE will be explored, with emphasis on how they are interrelated. Issues relevant to careers in EE and CoE (e.g., typical tasks performed by EEs and CoEs) will be explored.

ECE 301  Signals and Systems (4)
Provides an introduction to continuous-time and discrete-time signals and linear systems. Topics covered include time-domain descriptions (differential and difference equations, convolution) and frequency-domain descriptions (Fourier series and transforms, transfer function, frequency response, Z transforms, and Laplace transforms). Three
hours of lecture and two hours of laboratory per week. Prerequisites: MAT 230 and ECE 260.

ECE 315 Electronics I (4)
Introduction to electronics concentrating on the fundamental devices (diode, transistor, operational amplifier, logic gate) and their basic applications; modeling techniques; elementary circuit design based on devices, laboratory exercises. Three hours of lecture and two hours of laboratory per week. Prerequisite: ECE 260, Corequisite: ECE 251.

ECE 323 Electromagnetics (3)
Fundamentals of electromagnetic fields, Maxwell's Equations, plane waves, reflections. Application to transmission lines, antennas, propagation, electromagnetic interference, electronics packaging, wireless communications. Prerequisite: ECE 301 and MAT 253.

ECE 322 Semiconductor Devices (3)
Basic theory of semiconductors, p-n junctions, bipolar junction transistors, junction and MOS field effect devices, device design and modeling, fabrication.

ECE 351 Digital Systems Design (4)
Synchronous sequential circuit design. Algorithmic state machine method; state reduction; control-datapath circuit partitioning. Design of sequential arithmetic circuits. Memory interfacing; bus-based design. Specification and synthesis of digital systems using hardware description language and implementation using programmable logic devices. Simulation, analysis, testing, and verification of digital systems. Three hours of lecture and two hours of laboratory per week. Prerequisite: ECE 251.

ECE 352 Computer Architecture (4)
RISC machines and instruction set architectures, computer arithmetic, performance evaluation, single cycle and multi-cycle datapaths, pipelined architecture, static and dynamic scheduling, instruction-level parallelism, advanced pipelining, superscalar and super-pipelined processors, memory hierarchy and organization, I/O, compiler issues. Cross-listed with CS 411. Three hours of lecture and two hours of laboratory per week. Prerequisite: ECE 351.

ECE 361 Control Systems (4)
Introduction to analysis, design and modeling of control systems. Laplace transforms, transfer functions and transient analysis. Concepts of stability; polar and log-frequency plots. Numerical simulation and design of simple control systems. Three hours of lecture and two hours of laboratory per week. Prerequisite: ECE 251.

ECE 377 Communications Systems (3)

ECE 382 Seminar II (1)
Provides an overview of the professional aspects of the fields of Electrical Engineering and Computer Engineering. Topics to be covered include: typical career paths in ECE, engineering ethics, resume writing and job search techniques, preparing for graduate school, professional engineer license, etc.

ECE 387 Design Lab (3)
Students will complete a series of assigned design projects that rely on background in the areas of microprocessors, electronics, and signals & systems. Lecture will focus on various aspects of the design process as well as discussion of component characteristics. Prerequisite: ECE 315.

ECE 402 Signal Processing (3)
Discrete time and frequency analysis of linear systems. Random signals, correlation functions, power spectrum, and design of elementary digital filters. Prerequisite: ECE 301.

ECE 416 Analog Circuit Design (3)

ECE 428 Computer Networks (4)
Introduce principles and practices in computer and communication networks. Emphasis is on the design, implementation, and management of IP backbone networks (the Internet), wired/wireless LAN's, and mobile communication networks. Topics include: major network implementations, Internet protocols, LAN standards, network elements (switches, routers, bridges, and gateway), EMS/NMS, network security, and other current research topics. Three hours of lecture and two hours of laboratory per week. Prerequisite: ECE 352.

ECE 482 Control Systems II (3)
Conventional and state variable techniques for the analysis and design of analog and digital control systems, s-transform, sampled data systems, discrete state variable techniques, numerical simulation, and computer-aided design of control systems. Prerequisite: ECE 361.

ECE 487 Senior Project I (4)
Design projects in cooperation with local industry and other external clients. Specifications, proposal, time schedule, paper design. Periodic design reviews with client, written and oral progress reports, final presentation. Prerequisite: ECE 387 and senior standing.

ECE 488 Senior Project II (4)
Continuation of EE 487. Prototype fabrication and test. Demonstration and documentation of functioning system delivered to client. Prerequisite: ECE 487.

ECE 490 Special Topics in Electrical and Computer Engineering (Variable 2-4)
An in-depth study of topics selected from and based on new developments in electrical engineering and related areas. Topics may include areas of signal processing, control theory, communication theory, electronics, electromagnetism, semiconductor devices or device technology, probability, or alternative topic related to the discipline.

ECE 491 Independent Study/Electrical and Computer Engineering (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

Electrical Engineering Technology

ETC 101 Fundamentals of Electrical and Computer Engineering Technology (4)
Introduction to basic circuit laws and analysis, transient circuits and first order circuits. Introduction to electronic devices and linear electronics. Examine the concepts of power systems, programmable logic controllers, and transistor switches. May not be taken for credit by graduates of associate degree programs in electrical/electronic/computer engineering technology. Three hours of lecture and two hours of laboratory per week. Corequisite: MAT 120 or equivalent or permission of instructor. Cross-listed with CET 101.

ETC 102 Electric Circuits (4)
Units and definitions. Ohm's Law and Kirchhoff's Laws. Analysis of resistive circuits. Circuit analysis using superposition, nodal and mesh methods, Norton Thevenin theorems, and current and voltage divider rules. Transient and sinusoidal steady state response of circuits containing resistors, capacitors, and inductors. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 101 or equivalent or permission of instructor. Cross-listed with CET 102.

ETC 103 Electronics I (4)
Introduction to semiconductors, conductors, and insulators. Analysis of transistors, diodes, and their related application in rectifier and amplifier circuits. Wave-form interpretation, AC-DC loadlines, biasing techniques, small signal amplifiers, and h parameters. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 102 or permission...
of instructor. All students who have an EET associate degree may not enroll in this course for credit. Cross listed with CET 103.

**ETC 203  Electronics II (4)**
Introduction to operational amplifier circuits incorporating feedback. Amplifier configurations, feedback amplifiers, applications of Op-Amps in analog computers, and active filters. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 103 or equivalent or permission of instructor. All students who have an EET associate degree may not enroll for this course for credit. Cross listed with CET 203

**ETC 210  Digital Systems I (4)**
Fundamentals and advanced concepts of digital logic. Boolean algebra and functions. Design and implementation of combinatorial and sequential logic, minimization techniques, number representation, basic binary arithmetic and finite state machines. Logic families and digital integrated circuits and use of CAD tools for logic design. Prerequisite: ETC 102 or equivalent or permission of instructor. All students who have an EET associate degree may not enroll in this course for credit. Cross listed with CET 210 and ECE 251.

**ETC 215  Sustainable Energy Systems (2)**
An introduction to sustainable energy systems. Topics include solar energy, wind energy, fuel cell technology, biomass energy, geothermal energy, clean coal technology, ocean energy, hydroelectric power, and nuclear power. Two hours of lecture per week. Cross-listed with CTC 215 and MTC 215.

**ETC 216  Electronic Communications I (4)**
Introduction of analog electronic communication systems. Study of power measurements, signals, signal analysis, and signal generation. Focus on analog communication systems including amplitude modulation, frequency modulation, phase modulation and single sideband. Introduce the concepts of data communications and networking and study the public telephone network. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 102 or equivalent or permission of instructor.

**ETC 265  Digital Systems II (4)**
Study of Digital Systems Design using the Intel family of microprocessors and their peripheral support integrated circuits. Incorporate Intel assembly language to develop programs to run the Intel hardware. Devices studied include the 8255A PPI and 8251 PCI. Design and implementation of Intel hardware and software will be emphasized. Interfacing and testing of the computer's internal buses using logic analyzers and other test equipment will also be included. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 210 or equivalent. Cross listed with CET 265.

**ETC 288  Alternative Energy (2)**
Principles and techniques associated with the methods of energy extraction from solar, wind, geothermal and biomass sources. Power management, economic development and environmental considerations will be discussed.

**ETC 290  Introduction to Nanotechnology (3)**
An introductory course covering fundamentals of nanotechnology and its applications. Course content will cover diverse nanosystems including carbon nanotubes, semiconductor quantum dots, nanosensors, molecular nanomachines and nanomedicine. Prerequisite: One course in Physics or permission of the instructor. Cross listed with MTC 290.

**ETC 299  Quality Control and Workplace Issues (2)**
To provide a broad educational understanding of the impact of engineering solutions in a global and societal context along with a knowledge of contemporary issues and career opportunities. Also, focus will be placed on the process controls necessary for the practice of electrical and computer engineering. Cross listed with MTC 299.

**ETC 300  Tools in Technology (2)**
Introduction to the field of CAD (Computer Aided Design) in the electrical engineering technology field. Will cover the proper design of schematic drawings and the techniques of designing printed circuit boards. Prerequisites: ETC 102 and ETC 110 or equivalents.

**ETC 308  Electrical Power Systems I (2)**
Fundamentals of power system analysis and design will be studied. Both the theory and modeling of power systems will be covered. Topics include power transformers, transmission-line parameters, steady-state operation of transmission lines, power flow and power system controls. Two hours of lecture per week. Prerequisite: ETC 102 Corequisite: MAT 230.

**ETC 316  Electronic Communications II (4)**
Study of signals, digital modulation techniques, transmissions lines, microwave techniques and devices, and antennas. Optical fiber, RF and cellular communications are also introduced. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 216 or equivalent.

**ETC 331  Control Systems (4)**
Basic control systems studied using Laplace transforms. Principles of electro-mechanical control systems (electrical and mechanical), measuring means, components and their characteristics, and controller characteristics. Analysis of a control system by the frequency/phase responses and stability criteria. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 104 or equivalent.

**ETC 342  Microprocessor and Embedded Systems Programming and Design (4)**
Programming and microprocessor for embedded systems application. Includes an introduction to interfacing components and hardware of the microprocessor. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 110 or permission of instructor. No prior microprocessors background needed. Cross listed with CET 342 and ECE 252.

**ETC 356  Programmable Controllers (2)**
Use of programmable controllers to create relay logic ladder diagrams for the development of control systems.

**ETC 360  Advanced Circuit Analysis (2)**
Advanced circuit analysis stressing network theorems, solutions of time, and frequency domain problems. Prerequisites: MAT 121 and ETC 105.

**ETC 391  Fiber Optics (4)**
Principles and analysis of fiber optic components and systems, fiber optic sensors, integrated optoelectronics and applications of fiber optics in telecommunications and instrumentation. Three hours of lecture and two hours of laboratory per week. Prerequisite: One physics course with optics and/or permission of the instructor.

**ETC 392  Fundamentals of MEMS (Microelectromechanical Systems) and NEMS (Nanoelectromechanical Systems) (2)**
Introduces the student to the emerging field of microelectromechanical systems (MEMS) based nanotechnology. Topics will include introduction to nanoscale systems, methods of fabrication and packaging of MEMS, principle of microactuation, visualization and applications of nanoscale and micro systems. Prerequisite: One course in Physics or permission of the instructor. Cross listed with MTC 392.

**ETC 416  Data Communication & Computer Network Technology (4)**
The principles and techniques of data and computer communications are covered in detail in this course. Topics include principles of data transmission, data encoding, digital communication techniques, transmission codes, error detection and correction, protocols, communication networks, interfacing and architecture. Three hours of lecture and two hours of laboratory per week. Cross listed with CET 416.

**ETC 419  Satellite Communication (2)**
Principles of satellite communications, techniques of transmitting speech, data and video using satellites. Prerequisite: ETC 316 or permission of instructor.

**ETC 421  Wireless Communication Systems (4)**
Study of the theory and the techniques used in the implementation of wireless communication systems. Principle and analysis of mobile communication systems, wireless LAN, personal communication.
networks and Land-Mobile/satellite communications systems are also included. Prerequisite: ETC 316.

ETC 423 Microprocessor Interfacing (4)
Analysis of microprocessor interfacing with operational hardware. Three hours of lecture and two hours of laboratory per week. Prerequisites: ETC 110 or equivalent and ETC 342 or permission of instructor. Cross listed with CET 423.

ETC 429 Microprocessors, Microprogramming and Computer Architecture (4)
Design of microprocessors and computer central processing units. Stresses the architecture and microprogramming of the processor. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 110 or equivalent or permission of instructor. Cross listed with CET 429.

ETC 431 PC Integration and Maintenance (4)
This course stresses the architecture and design of personal computers and emphasizes the use of diagnostic hardware and software to evaluate PC systems in actual lab situations. Two hours of lecture and four hours of laboratory per week. Prerequisite: ETC 311 or ETC 342 or CS 220. Cross listed with CET 431.

ETC 433 Automatic Control Systems (4)
Transfer function approach to the analysis and design of feedback control systems. Use of Bode diagrams, and root locus plots to predict system performances. Analog and digital simulation of industrial control system problems. Prerequisite: ETC 331 or equivalent.

ETC 434 Servomechanism Design (2)

ETC 435 Digital Control and Robotics (4)
Discrete time systems and transform sampling and reconstruction, state-space technique and digital simulation, stability of digital control systems, digital filtering and digital compensator design, discrete-time optimal control, and applications in robotics. This course is the capstone for the control emphasis which requires working on a team project using a robot arm in place of the laboratory, with an oral and written presentation at the completion of the project. Three hours of lecture and two hours of laboratory per week. Prerequisites: ETC 331 and one course in computer programming.

ETC 437 Digital Filters (4)
Review of discrete-time linear systems and random processes, z-transforms, difference equations, and state-space formulations. Discrete Fourier analysis and FFT algorithms, including discussions of recursive and non-recursive filter transformations, FIR transversal and Kalman filters. Three hours of lecture and two hours of laboratory per week. Prerequisite: MAT 122.

ETC 444 Special Topics in Microprocessor/Digital (Variable 1-4)
Seminar on the state-of-the-art in microprocessor and digital techniques. Topics will vary as technology changes. May be taken more than once for credit provided topics are different. Prerequisite: ETC 110 or equivalent or permission of instructor. Cross listed with CET 444.

ETC 445 Microcontrollers (4)
Study the operation and design of systems using single chip microcontrollers and microcomputers. Current equipment will emphasize the Microchip PIC series of microcontrollers. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 342 or ETC 311 or equivalent.

ETC 446 Programmable Logic Devices (4)
Synchronous sequential circuit design. Algorithmic state machine method; state reduction; control-data path circuit partitioning. Design of sequential arithmetic circuits. Memory interfacing; bus-based design. Specification and synthesis of digital systems using hardware description language and implementation using programmable logic devices. Simulation, analysis, testing, and verification of digital systems. Cross-listed with ECE 351. Prerequisite: ETC 210 or equivalent.

ETC 455 VLSI Design Fundamentals (4)
Very Large Scale Integration (VLSI) design fundamentals relating to cell design, layout, chip design tools for both NMOS and CMOS are covered. Emphasis on chip testability will be at the end of the course. The course is supplemented by state-of-the-art labs. Three hours of lecture and two hours of laboratory per week. Prerequisite: ETC 110 or equivalent, or permission of instructor.

ETC 475 Data Compression & Multimedia Technology (4)
Data compression techniques are covered in detail for video, audio and text compression leading to the standards. Sensors are interfaced and an integrated environment is created by the use of appropriate hardware and software. Prerequisite: ETC 316 or permission of instructor.

ETC 480 Electrical Technology Senior Project I (2)
This course involves the full implementation, testing, troubleshooting, and final demonstration of the project as proposed in ETC 480. An updated final report shall also accompany the final project. Note: Credit given only if ETC 480 has been successfully completed. Prerequisite: ETC 480.

ETC 483 Optical Communications (4)
Principles and techniques associated with the transmission of optical radiation in waveguides (fibers) and free space, low and high power optical sources, internal (direct) and external (indirect) modulations. Fiber optical waveguide and characteristics of free space, homodyne and heterodyne detection, and design of optical communication systems. Three hours of lecture and two hours of laboratory per week. This is the capstone course for the concentration in communications and requires working on a team project in place of laboratory assignments with oral and written presentation at the completion of the project. The written report will include analysis, design and management of the project. Prerequisite: ETC 391 or permission of instructor.

ETC 485 Microwave Communications and Radar Technology (4)
Provides a basic understanding of microwave communications and radar technology. Topics include fundamentals of microwave and radar technology, microwave devices, microwave wave-guides and antennas, types of radars and applications. Three hours of lecture and two hours of laboratory. Prerequisite: ETC 316.

ETC 488 Computer Control of Instrumentation (4)
Computer control of electronic instrumentation via the IEEE Standard 488 General Purpose Instrumentation BUS (GPIB) for the purposes of data acquisition and its presentation (tabular and graphic form). “C” programming is utilized as the control language. Two hours of lecture and four hours of laboratory per week. Prerequisites: ETC 331 and knowledge of a programming language or permission of the instructor.

ETC 490 Special Topics in Communication Technology (2)
An in-depth study of topics selected from and based on new developments in communications technology and related areas. Topics may include areas of secure communications, mobile communications, image transmission and optical signal processing, computer-aided design, communications links and networks and integrated services digital network standards. Prerequisites: ETC 316 and permission of instructor.

ETC 491 Independent Study (Variable 1-4)
Extensive study of a particular topic of student interest under the supervision of a faculty member. The student is required to submit a
Courses

written proposal which includes a description of the project, its duration, educational goals, methods of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

ETC 494 CO-OP Assignment (Variable 2 or 4)
Provides 14 weeks of supervised experience in an industrial or government installation applying technology knowledge towards the solution of engineering technology problems and developing abilities required in the student’s career. At least two reports and two supervisors’ evaluations are required. A minimum of 60 contact hours of industrial work is required per credit hour. May be taken repetitively up to a maximum of four credits. Prerequisite: Permission of employer and dean.

ETC 495 Nanotechnology Research (3)
This course introduces students with the scientific, technical and methodological aspects of nanotechnology research. Students will be required to work either individually or in a group on a research project and integrate knowledge of their majors into the evolving field of nanotechnology. Emphasis is placed on addressing interdisciplinary, economical, ethical, and environmental aspects of nanotechnology.

English

ENG 090 Introduction to College Writing
For students not meeting English 101 placement requirements. English 090 will prepare students for English 101 (Freshman Composition) by addressing fundamental writing issues at sentence, paragraph, and essay levels, with emphasis on student-generated writing and model essays. Only S/U grades are assigned for this course.

ENG 101 Freshman Composition (4)
An introductory expository writing course. Students will write a variety of short essays, culminating in a research essay. Emphasis is on close reading, discovering worthwhile topics, drafting and revising, and evaluation and presentation of evidence. Students will also be evaluated on the development and implementation of an oral presentation. Meets new General Education Basic Communication requirement. Prerequisite: COMPASS Placement Test score of 68 or higher or successful completion of ENG 090.

ENG 105 Critical Reading and Writing (4)
Students will write critical essays based on readings. The focus of this class will be critical reading and response. Students will be exposed to research methods including information gathering, source evaluation and analysis, synthesizing ideas and evidence and use of documentation. Readings for this class may be topical or organized around a theme. An oral presentation based on one of the course topics will be required and evaluated. Meets new General Education Basic Communication requirement. Prerequisites: ENG 101 or appropriate placement test score.

ENG 110 Introduction to Literature (4)
An introduction to the critical reading of various literary genres, with attention to the interpretation and evaluation of fiction, drama and creative non-fiction. Readings will represent a pan-historical approach to the study of literature and will include non-Western texts. The course will not be arranged by theme or topic; it is designed to cover a broad range of issues, themes, and topics through the study of various literary genres. This course provides a critical and aesthetic introduction to the major genres of literature.

ENG 205 Creative Writing (4)
Through writing prose fiction or poetry, students develop competency in narration, description, characterization, and other writing skills developing a personal “voice”. As students write, critique, and re-write, they learn the skill of self-criticism which is a necessary part of all writing. Meets new General Education Arts requirement.

ENG 211 The Arts and Cultural Revolution (4)
A study of one non-Western culture with emphasis on how its beliefs and customs are represented in the arts, including literature and visual arts, during periods of rapid technological and cultural change. Comparisons to parallel Western works will be made to clarify cultural difference. The culture studied will vary; current subjects are modern Japan, revolutionary Mexico, Russia since the Bolshevik Revolution, and modern Israel.

ENG 310 Topics in American Literature (4)
A study of a major period, genre, figure, or theme in American literature. Typical topics include science fiction, twentieth century poetry, slavery and the Civil War, and the image of women in American literature. May be taken more than once as topics change. Meets new General Education Humanities requirement.

ENG 311 Topics in World Literature (4)
A study of a major period, genre, figure, or theme in world literature. Typical topics include the modern European novel, technology in literature, Shakespeare, modernism, and women and power. May be taken more than once as topics change. Meets new General Education Humanities requirement.

ENG 312 Studies in the Short Story (4)
Examines the short story as a literary genre. The emphasis is on interpretation, though selections may vary each semester. Literary questions provide the occasion for students to develop reading and writing skills and to explore how literature and composition interact. Meets new General Education Humanities requirement.

ENG 320 Recent American Poetry (4)
Begins with several major poets of the 1920’s: W.C. Williams, T.S. Eliot, and Wallace Stevens. These poets serve as a background for the study of poetry since World War II. Some of the poets studied will be chosen by the class. Meets new General Education Humanities requirement.

ENG 331 Black Voices (4)
A study of a major period, genre, figure, or theme in American literature. Typical topics include science fiction, twentieth century poetry, slavery and the Civil War, and the image of women in American literature. May be taken more than once as topics change. Meets new General Education Humanities requirement.

ENG 332 Black Voices (4)
A study of African-American literature and will examine their works in light of some of the political, cultural, and sociological influences evident within these works. Meets new General Education Humanities requirement.

ENG 350 Dramatic Literature (4)
The playwright is a shaper of events as well as a wordsmith. Plays from several cultural eras will be studied to clarify the dramatist’s careful balance of plot, character, idea, language, and spectacle. Film and video versions of plays will supplement text study. Meets new General Education Humanities requirement.

ENG 360 Reading the Film (4)
By accepting film as a legitimate form of literary expression, we utilize the tools of literary analysis which allow us to “read” the images of the cinema. This course will review some of the components of the language of literature and will introduce the basic elements of film technique. Students will be asked to “read,” understand, and critically evaluate the translation of literary elements into the language of film. Meets new General Education Humanities requirement.

ENG 361 Film Direction: Alfred Hitchcock (Variable 2-4)
Encourages students to critically examine the facets of the film image. Using Alfred Hitchcock as a model, students will be presented with the range of options available to a film director and shown some of the techniques employed to make a text (story) visual. Our focus will be on the rhetoric and style found in the language of the cinema as represented in the work of Alfred Hitchcock. Meets new General Education Humanities requirement.

ENG 375 The Novel (4)
A study of the nature and evolution of the novel, including the social conditions that stimulated its growth and the special characteristics and possibilities of the genre. Emphasis will fall on British and American novels from the 18th century to the present, including trends such as the novel of manners, realism, symbolic and impressionistic realism, and recent experiments (“fabulation,” the non-fiction novel). Meets new General Education Humanities requirement.

ENG 491 Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to
submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

**Entrepreneurship**

**ENT 375 Introduction to Entrepreneurship (4)**
Introduction to entrepreneurship emphasizing the critical role of recognizing and creating opportunities in small business, new ventures, corporate projects, and other organizational settings. Topics include attributes of entrepreneurs, entrepreneurial careers, idea conceptualization, introduction to marketing and finance, profitability, opportunity evaluation, and introduction to business plan writing.

**ENT 378 Entrepreneurial Technology Management (4)**
Technology provides entrepreneurs with a vast, evolving medium for engaging in all phases of business activity. New business opportunities are literally evolving with the introduction of new technological developments. As pioneers in the exciting new dimension of business, students will study trends that have evolved, learn what methods and standards currently exist, learn how to analyze existing business web activity, and develop web business strategies for launching their own business activities on the net. Both classroom and computer laboratory are integrated providing a real-time learning by doing environment.

**ENT 485 Business Planning for Entrepreneurs (4)**
Focuses on planning activities that support entrepreneurial ventures including small businesses, franchises, non-profits, and internal corporate projects. Emphasis on generating a business plan for innovative entrepreneurial ventures and concepts. In depth study of written and oral documentation needed to generate a complete quantitative and qualitative business plan. Communication of financial, business, and rhetorical arguments will be covered. Prerequisite: ENT 375 and FIN 378.

**ENT 492 Entrepreneurship Internship (4)**
Supervised, discipline based experience in business organization. Emphasis on application, process and techniques used by business to sustain and promote growth. Specific skills and competencies needed to be a successful decision-maker are targeted. Oversight provided by the School internship coordinator, min-semester evaluation and a final, comprehensive written report are required. Prerequisite: ENT 375, ENT 378, and Permission of Instructor. Only S/U grades are awarded for this course.

**Finance**

**FIN 302 Financial Management Principles (4)**
General principles of corporate finance are presented. Topics include: the tax environment, an overview of financial planning and control, working capital management, and forms of long-term financing. Objectives include an analysis of responsibilities and functions performed by financial analysts, whether representing a firm, a financial institution, an investment officer, or financial/management consultant. Prerequisite: ACC 201 or equivalent or permission of instructor.

**FIN 332 Fundamentals of Investments (4)**
The investment of capital funds is a complex field and topics studied include: investment and risk, determination of investment policy, types of security investments, sources of investment information, the broker, the stock market, and portfolio management.

**FIN 341 Financial Institutions (4)**
Analysis of financial institutions with emphasis on their sources of funds and operating characteristics. Emphasis also is given to the role of commercial banks in the money market and the relationship of the other major financial institutions to the commercial banks.

**FIN 343 Personal Finance (4)**
This course provides the informational and decision-making tools needed for planning and implementing a successful personal financial plan. It provides an overview of personal and family financial planning with an emphasis on financial recordkeeping, planning your spending, tax planning, consumer credit, making buying decisions, purchasing insurance, selecting investments and retirement and estate planning.

**FIN 378 Finance for Entrepreneurs (4)**
Focus on financial planning, analysis, and find raising to seed a small business through venture, angel, investment, and commercial capital sources. Topics include financial management for entrepreneurs over the life of the business including start-up financing, financial planning for growth, going public, selling off, bankruptcy, and other pertinent financing topics. Communication of entrepreneurial funding ideas through written and oral forms will also be discussed. Prerequisite: ENT 375

**FIN 411 Financial Management Problems (4)**
An in-depth financial analysis of problems experienced by different firms is pursued using actual cases and outside reading to supplement text data. Studies will cover value of cash flow, capital planning, break-even analysis, inventory control, financial structure, cost of capital, external growth, failure, reorganization, and liquidation. Prerequisite: FIN 302.

**FIN 420 Financial Planning and Control (4)**
Analytical techniques and procedures for dealing with capital structure problems of business. Emphasis will be on capital budgeting techniques and methods of ranking investment alternatives available to business. The student should become familiar with different theories of probabilities to minimize risk in financial planning and control. Prerequisite: FIN 411 or equivalent.

**FIN 491 Independent Study (Variable 1-4)**
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

**FIN 492 Finance Internship (4)**
Supervised, discipline related experience in a business organization. Emphasis is on application, process, and techniques used by business to sustain business and promote growth. Specific skills and competencies needed to be a successful decision-maker will be targeted. Oversight will be provided by the School internship coordinator and the sponsoring organization. Periodic meetings with the supervisor, mid-semester evaluation, and a final, comprehensive written report are required. Prerequisite: Permission of instructor.
French

FRE 101  Elementary French (4)
Introduces the basics of French language and culture. The student will develop the four language skills of listening, speaking, reading and writing through practice in pronunciation, listening comprehension and reading and writing of short passages. Integrated into the course is an introduction to the French way of life. Meets the new General Education Foreign Language requirement.

FRE 102  Intermediate French (4)
This course continues the basic grammar of FRE 101 to develop proficiency in French. It refines and polishes the four basic language acquisition skills: aural comprehension, speaking, reading, and writing. The focus is communication: listening, understanding, and responding in French. Instruction is primarily in French.

General Studies

GEN 300  Academic Skills Enhancement (1)
To help students reinforce the universal foundations of academic success, including critical thinking, study skills and time management. Additionally, to help students discover and benefit from their own individual strengths and experience. Assignments include readings from a variety of sources, self-reflection papers, and model assignments from different academic disciplines. To use this course as a first step toward a more rewarding academic career, students will produce a personalized Learning Plan and design and participate in a community service project. Credits total in their chosen areas of concentration.

Geography

GOG 310  Economic Geography (4)
Surveys theories of the location of specific economic activities, such as agriculture, manufacturing, etc. Also considers theories of economic interaction among locations, including transportation, trade, and the role of cities. The student will have a grasp of why particular economic activities are located where they are, and of the economic consequences of physical geography. The goal of the course is an understanding of land-use planning from the geographer's perspective.

Health and Physical Activity

FIT 100  Introduction to Fitness (1)
Learn concepts of cardio, weight and flexibility training for long-term cardiovascular health, strength and endurance. The basic principles of exercise and the proper utilization of fitness equipment will be demonstrated and applied.

FIT 101  Concepts of Aerobic Training (1)
Learn concepts of aerobic training for weight loss, increased flexibility and for long-term cardiovascular health, strength and endurance. The basic principles of exercise and the proper utilization of fitness equipment will be demonstrated and applied.

FIT 102  Athletic Conditioning (1)
Concepts of total athletic conditioning, including cardiovascular, strength and agility training, through application of dynamic warm-up, flexibility, plyometrics and interval training.

HLT 200  Peer Health Education I (2)
An introduction to the field of peer health education with an emphasis on the development of a wellness lifestyle and self responsibility. Communication and interpersonal skills needed to peer counsel will be introduced. Course topics include drug, tobacco and alcohol use/abuse as well as sexually transmitted diseases. Students will be involved in campus outreach activities such as informational displays and data collection.

REC 101  Introductory Racquetball (1)
Learn basic skills, strategies and rules for competitive recreational play; utilize racquetball as a primary or secondary source for cardiovascular health, flexibility and endurance.

REC 102  Introductory Golf (1)
Learn basic skills, strategies and rules for competitive recreational play; utilize golf as a primary or secondary source for cardiovascular health, flexibility and endurance.

Health Information Management

HIM 100  Introduction to the Health Information Management Field (3)
Introduction to the health information field and professional ethics. Regulatory requirements for content and maintenance. Numbering and filing systems. Retention and storage of records. Laboratory and lecture. Two hours of lecture and two hours of laboratory per week.

HIM 111  Medical Terminology (3)
The language of medicine including Latin/Greek prefixes, suffixes and root words. Diagnostic and procedural terms will be included.

HIM 212  Pathophysiology for Health Information Management (3)
A study of major disease processes including their symptoms, diagnosis, and treatment. Students will learn which diagnostic tests are used as well as the appropriate surgical techniques. Basic pharmacology and the most commonly used drugs will be discussed.

HIM 220  Data Management and Analysis for Health Information (3)
Use of database management software to manage and query health care data. Use of spreadsheet software to import data from health care databases. Data presentation principles. Calculation and use of special statistics related to the health care setting. These statistics are used for health facility planning and administration and for epidemiology. Pre/ corequisite: CSC 311C.

HIM 305  Inpatient Coding and Classification (3)
Coding and classification schemes used for hospital inpatients will be discussed. Special emphasis will be placed on the International Classification of Disease-10th-Clinical Modification (ICD-10-CM) and International Classification of Disease-10th-Procedure Coding System (ICD-10-PCS). ICD-9CM will be discussed as legacy. Two hours of lecture and two hours of laboratory per week. Prerequisites: HIM 100/111/212 and BIO 215. Corequisite: Completion of or concurrent enrollment in BIO 216.

HIM 306  Outpatient Coding and Classification (3)
Coding and classification schemes used for outpatients in hospitals, ambulatory care centers and physician offices will be discussed. Special emphasis will be placed on Current Procedural Terminology, 4th edition (CPT-4), and reimbursement classifications. Two hours lecture and two hours laboratory per week. Prerequisites: BIO 215. Corequisite: Completion of or concurrent enrollment in HIM 305 and BIO 216.

HIM 392  Professional Practice Experience I - Technical (3)
The student will complete a three-week practicum in a hospital health information management services area. Students will practice technical skills learned during the first year of the health information management curriculum. (Note: Students who transfer from a health information technology program will transfer the equivalent of this course.) Prerequisites: HIM 305 and HIM 306.

HIM 400  Non-Hospital Health Information Management Systems (2)
Non-hospital health care settings offer exciting employment alternatives for health information managers. Included in this course will be a study of health information systems for psychiatric, developmental, occupational, long term, home health, correctional, emergency medical services, and veterinary care. In addition, disease registries will be covered. Prerequisites: HIM 392. Corequisite: HIM 494.
HIM 401  Systems for the Evaluation and Improvement of Health Care Systems (3)
A study of the historical basis for current trends in the evaluation of health care, and an explanation of the role of the health care manager in this process. Methods for assessing quality and appropriateness. Use of the system as a risk management tool. Two hours of lecture and two hours of laboratory per week.

HIM 410  Health Information Services Management (3)
Department management techniques for health information management. Applications of systems analysis, computer science, budgeting, personnel management, and plant layout for the health information manager. Two hours lecture and two hours laboratory per week. Prerequisite: HIM 400.

HIM 425  Research in Health Information Management (3)
A study of the application of research techniques to the health information management field. Students will perform small research studies and will review published research in the field. Prerequisite: HIM 400.

HIM 435  Health Care Management/Medical Information Systems (3)
This course is intended to expose hospital managers to the areas where computers can assist in the direct care of the patient and the management of hospitals. Emphasis will be placed on how to evaluate computers and information systems for hospitals, the unique problems involved in implementing computerized systems in the health care environment, and strategies for minimizing problems.

HIM 440  Electronic Health Records (3)
Addresses the definition, benefits, standards, functionality and confidentiality/security measures for the electronic health record. Case studies will be used to show how two health care organizations have developed their systems. Prerequisite: HIM 100 or permission of instructor.

HIM 490  Selected Topics in Health Information Management (Variable 1-4)
Courses offered as Selected Topics in Health Information Management supplement regularly offered courses. Such courses enhance the student’s general knowledge of Health Information Management topics.

HIM 491  Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, education goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

HIM 493  Senior Seminar (2)
Final summary course with discussion of current events in the health information management field and preparation to enter the job market. Includes a final comprehensive examination on the curriculum (a mock certification examination for the registered health information administrator). Prereq/Corequisite: HIM 410.

HIM 494  Professional Practice Experience II - Specialty (1)
Students will rotate through various non-hospital health information management service areas in facilities, such as those dealing with mental health, developmental disabilities, long-term care, hospice, home care, ambulatory care, disease registries, correctional health and occupational health. Corequisite: HIM 400.

HIM 495  Professional Practice Experience III – Management (3)
The student will complete a three-week experience in the health information management service area of a type of health-related organization of the student’s choice. Students will apply management skills learned in the health information management curriculum and they will complete at least one project for the organization. Corequisites: completion of or concurrent enrollment in HIM 410.

Health Services Management

HSM 201  Health Care Delivery in the U. S. (3)
Health care delivery in the United States is a dynamic, evolving and extremely complex system; comprised of myriad providers and payers. The system is further complicated by significant government involvement in both delivery and payment. This course will address the multiple components of the health care delivery system and the rationale for its patterns and practices.

HSM 300  Introduction to Quantitative Methods in Health Services (3)
Health system utilization statistics are significant factors when assessing the population’s use of the health care delivery system. This course is intended to introduce the student to these important statistics, their calculation and interpretation.

HSM 309  Health Care and the Law (3)
A study of the legal aspects of various areas of health care administration will be conducted. Specific applications and study will include the health care administrator, governing boards, hospital liability, consent, procedure, malpractice, and other related topics.

HSM 311  Management for the Health Professions (3)
Introduces students to six basic management functions (planning, organizing, staffing, directing, controlling and decision making) in the context of health care such as hospitals, long term care facilities and other health related organizations. Concepts of management and management responsibilities (such as ethics, leadership and motivation) are related to selected functions. Students lead case discussion groups or critique journal articles on each management function.

HSM 401  Introduction to Epidemiology (3)
Preventing the incidence of disease requires an understanding of the risk factors associated with its cause. This course will provide a foundation for understanding the dynamics of health and disease in society, and impart a grasp of the fundamentals of epidemiology.

HSM 405  Economics of Health Care (3)
Uses an economic framework to examine major components of the health care system. Topics covered include the principles of microeconomics and regression analysis, the production of health, the demand for medical care (consumer behavior), the theory of health insurance, the market for physician services, the market for hospital services, and the long-term care services market. Students will complete a major research paper on a health economics related topic. Cross listed with ECO 405.

HSM 410  Alternative Methods of Health Care Delivery (3)
Provides a framework for understanding the meaning of the term “alternative health care delivery” and explores applicable methods from several health care arenas including the evolution of managed care, the expansion of alternative and complimentary medicine modalities into mainstream medicine and the international health care scene. The course presents theories, principles and methods for investigating, evaluating and conducting business using the discussed methods of health care delivery. It is designed to introduce students as current and future health care administrators to the concepts and dynamics of alternative health care delivery methods as a basis for monitoring organizational, legislative and reimbursement changes – be it in acute care, long term care, physician practice management or some similar field. Prerequisite: HSM 201.

HSM 422  Nursing Home Administration (3)
Aging of the United States population has expanded the need for long-term care services. This course will examine the nursing home as an integral part of the long-term care continuum. This course is intended to provide the foundation necessary for students preparing for an internship and subsequent career as a nursing home administrator. It is a requirement for placement in a nursing home internship. Prerequisites: HSM 201, HSM 311.

SUNYIT Undergraduate Catalog 2011-2013 109
Courses

HSM 425  Health Care Marketing and Strategic Planning (4)
Decision making, relative to facility planning and financial integrity, has become extremely complex in the health care field. Health care marketing is one of the tools available to the health professional which provides guidance and support to these efforts. This course will address many of the planning and marketing variables that should be addressed, as well as how to coordinate these activities. This is a capstone course. Prerequisites: HSM 300 and HSM 435 or ACC 430.

HSM 431  Financial Management for Ambulatory Care Organizations (3)
This course is designed for the health care administrator who will work primarily in ambulatory care facilities. The course will focus on financial reimbursement issues which the administrator must understand in providing strategic financial and operational direction to his/her facility. Prerequisites: HSM 435 or permission of instructor.

HSM 435  Financial Management for Health Care Organizations (3)
Students will acquire a working knowledge of cash flow projections, budgeting, cost accounting and control and evaluation techniques for not-for-profit organizations. Case study analysis and presentations will be the primary instructional methods. Students will learn to use an electronic spreadsheet to assist in analyzing case studies. Cross listed with ACC 430. Prerequisite: ACC 201 or equivalent.

HSM 436  Financial Management for Health Care Organizations – Case Study (1)
An extensive accounting case analysis problem involving a not-for-profit entity will be assigned. Students will be required to submit a written report. Students must be registered currently in ACC 430 or HSM 435; case study will be arranged by instructor on an independent study basis. Prerequisites: ACC 201 or equivalent and currently enrolled in or having completed HSM 435 or ACC 430.

HSM 491  Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

HSM 492  Internship (Variable 3-16)
Students work off-campus under the direction of a qualified preceptor in one of the many types of organizations involved in health care in New York or other states. Students are exposed to the various components of the organization and may prepare special reports or studies on behalf of the organization. To be eligible for an internship, students must achieve a C in all HSM core and elective courses and a 2.3 overall grade point average in these courses. Only S/U grades are awarded for this course. May be taken more than once for credit. Prerequisite: Permission of instructor.

History

HIS 101  American History: Colonies to Reconstruction (4)
A description and analysis of the major factors accounting for the transformation of the earliest settlements into a sovereign national power. Emphasis will be placed on the role of immigration, changing institutional values and structures, and the interplay between economic and political forces. Meets new General Education American History requirement.

HIS 150  History of Modern Europe (4)
A political and social survey of the period 1815-present. Primary attention is given to the major Western European states and Russia. Central themes of the course include: the decline of aristocratic dominance and the attempts of first the middle, and then the lower classes, to gain control of society, the origins of World War I, the war itself and its aftermath, the rise of totalitarianism and the coming of World War II, the Cold War, new prosperity, and the global age. Meets new General Education Western Civilization or Humanities requirement.

HIS 240  Latin American Civilizations (4)
A one-semester overview of Latin America, from the first encounters of European, African, and Native American cultures to the diverse and complex societies of the present. Study of the region’s indigenous and colonial past will help explain contemporary politics, economics, social relations, and cultural movements. Repercussions of the independence movements and subsequent democracies, monarchies, dictatorships and reform movements will be tracked. Students will evaluate demographic changes, social upheaval and revolution, industrialization and development, environmental degradation, and foreign intervention. Throughout the course, changes and continuities in race, class, gender, and other social roles will be identified and analyzed. Meets new General Education Other World Civilizations requirement.

HIS 304  Technology in American History (4)
A lecture and reading and writing intensive course in American history organized around the theme of technology. History is the understanding of change over time. As such, this course focuses on technology as a central organizing theme to study the changes that have happened in America. We will do so by exploring the interrelationship and interactions among technology and the changing political, economic, social, intellectual and cultural contexts in America. As a result, students can become thoughtful analysts of technology in context.

HIS 306  History of Science and Technology (4)
An analysis of the histories of science and technology in the context of the broad outlines of world history and the history of western civilization. As such, this course is an exploration of the interrelationships and interactions among technology, different forms of knowledge about nature, and their political, economic, social, intellectual, and cultural contexts. That exploration will lay the foundation for a cross-cultural comparison of science and technology in the West and in other civilizations to analyze the significance of western science and technology’s dominance. Lectures will supplement the text, and will cover themes and issues important to understand the changes that occurred in the histories of science and technology. May not be taken for credit by students who previously took and passed HIS 307. Meets new General Education Western Civilization and Other World Civilizations requirements, or can be used to meet Humanities requirement.

HIS 308  Latinos in American History (4)
A review and analysis of the major historical developments explaining the presence of the United States’ largest emergent minority group, the Hispanics, or Latinos. Major themes include the colonial activities of the Spanish and Portuguese; subsequent historical developments involving Mexico, Puerto Rico, Cuba, and other areas of Central and South America; the experience of Latinos in the U.S. in the past 200 years; and the current status and culture of Latino groups in American society. Meets new General Education American History requirement. Only students scoring about 94 on the NYS Regents in American History.

HIS 317  Topics in Black History (4)
Deals with a variety of periods in Black History which have contributed to American life as it exists today. Topics will change each semester and may deal with such diverse matters as the African cultural roots of Afro-American life, views of Black family life and institutions during slavery. Meets new General Education Western Civilization or Humanities requirement.

HIS 330  American Women's History: U.S. Historical Experiences in Hemispheric Perspective (4)
An examination of the history of women in the United States from European colonization (ca. 1600) to the present, plus the opportunity
to compare American women’s experiences with those of their peers throughout the Western Hemisphere. Themes addressed will include: race and ethnicity in colonization and coexistence, labor (paid and unpaid) and class issues, health and sexuality, religion and spirituality, and legal and political struggles. Meets new General Education American History requirement.

**HUM 220** Introduction to Social and Political Thought (4)

An introduction to major ideas, themes and thinkers in social and political thought. While providing an overview of the western tradition, the course will also focus on recurring themes such as questions of power and authority, relations between the individual and the state, concepts of justice, equality, rights, and ideas of individualism, democracy, and community. Attention will be given to the development of ideas within their larger social, cultural and historical contexts.

### Industrial Engineering Technology

**ITC 101** Introduction to Engineering Technology (2)

Required for all freshmen in Industrial Engineering Technology. Topics include academic requirements, advisement, software packages, career opportunities, and project management. Additional topics include professional, ethical and social responsibilities; respect for diversity and a knowledge of contemporary professional, societal and global issues; and a commitment to quality, timeliness and continuous improvement. Cross listed with CTC/MTC 101.

**ITC 111** Manufacturing Processes (4)

Machining and non-machining methods of processing materials into manufactured components will be discussed. Both traditional and non-traditional machining processes are covered. Machine shop equipment and practices, along with different types of tooling, will be reviewed. Cross listed with MTC 111. Two hours of lecture and four hours of laboratory per week. Prerequisite: ITC 102

**ITC 162** Computer Aided Design (4)

Students will develop basic skills in using AutoCAD software to develop mechanical drawings. Blueprint reading and basic drawing fundamentals will be covered. Students will become proficient in using 2D AutoCAD software. Geometric tolerancing and dimensioning will be covered. Students cannot receive credit for both ITC 162 and ITC 362. Cross listed with MTC 102.

**ITC 198** Industrial Instrumentation (2)

A freshman-level course that teaches the fundamentals of devices and methods used to instrument industrial processes and commercial products. Focuses on conventional instruments, electro-mechanical transducers, and computer-based data acquisition equipment and techniques. Two hours of lecture per week, with laboratory work substituted for lecture as appropriate. Prerequisite: Introductory Physics, Algebra, and Trigonometry. Students completing this course cannot take MTC 398 for credit. Cross listed with MTC 198.

**ITC 218** Statics (2)

Analysis of equivalent systems of forces, free body diagrams, equilibrium of particles and rigid bodies, centroids, friction, and forces in structures. Two hours of lecture per week, with laboratory work substituted for lecture as appropriate. Prerequisites: PHY 101 and MAT 120. Cross listed with MTC 218 and CTC 218.

**ITC 261** Introductory Fluid Mechanics (4)

Introduction to fluid mechanics, fluid properties, fluid statics and dynamics, pressure variation in flowing fluids, drag and lift, applications of fluid mechanics. Three hours of lecture and two hours of laboratory per week. Students may not receive credit for both ITC 261 and MTC 461. Cross listed with MTC 261.

**ITC 301** Professionalism in the Work Place (2)

Topics include lifelong learning; professional, ethical and social responsibilities; respect for diversity and a knowledge of contemporary professional, societal and global issues; and a commitment to quality, timeliness, and continuous improvement. Cross listed with CTC 301 and MTC 301.

**ITC 311** Manufacturing Operations (4)

Manufacturing concepts which relate to operation selection. A limited number of topics are covered each semester, such as casting, machining, joining, forming, chipless machining, and surface finishing.
ITC 320 Applications Project I (2)
Individual student designed project in a major field, includes: written specifications of project requirements, project plan, milestone identification, implementation, and descriptive report. An oral presentation regarding the project is required. Course includes a one-hour lecture per week. Students will work on an independent basis for the other hour.

ITC 321 Applications Project II (2)
Individual student designed project in a major field, includes: written specifications of project requirements, project plan, milestone identification, implementation, and descriptive report. An oral presentation regarding the project is required. Course includes a one-hour lecture per week. Students will work on an independent basis for the other hour.

ITC 327 Production & Operations Management (4)
Modern production and operations management in an industrial setting. Planning, organizing, and controlling using the relevant qualitative and quantitative approaches. Covers topics such as forecasting, capacity requirement, planning, work standards, scheduling, fundamentals of inventory control, and material requirement planning. Cross listed with MTC 327.

ITC 330 Assistive Technology (2)
Introduction to the fundamentals of assistive technology for people with physical disabilities. Rehabilitation engineering with an emphasis on mechanical devices used to enhance mobility and manipulation, improving physical interaction with the environment. Topics include prosthetics, manual wheelchairs, power wheelchairs, and alternative methods for computer access. Two hours of lecture per week. Cross listed with MTC 330.

ITC 336 Material Science Applications (2)
Composition, structure, and behavior of metallic and non-metallic materials, and their effect on the physical, mechanical, and electrical properties of that material. Analysis of crystalline structure, physical properties, and service analysis of materials for physical, mechanical, and electrical properties. Cross listed with MTC 336.

ITC 358 Plant Layout and Material Handling (4)
Analysis and design of layouts used in manufacturing industries. The analysis and selection of the optimal material handling system. Appropriate laboratory experiments will be assigned.

ITC 362 Computer-Aided Design for Industrial Engineering Technology (4)
Basics of CAD as applied to Industrial Engineering Technology. AUTOCAD software used for typical Industrial Engineering/Technology applications such as: part prints, process prints, tooling layouts, NC prints, office layouts, and factory layouts.

ITC 366 Introduction to Robotics (2)
Introduction to robot classification, justification, and application characters in different environments. Hands-on operational experience, including motion control, safety, tooling, and industrial application project. One hour lecture and two hours of laboratory per week.

ITC 373 Statistical Quality Control (4)
Modeling and inferences about process quality. Philosophy and methods of statistical process control. Quality improvement in the modern business environment. Techniques for quality trouble-shooting, decision-making, and implementation. Review of basic concepts for statistics. Prerequisite: STA 225 or STA 100 or permission of instructor.

ITC 390 ISO 9000 and Total Quality Assurance (2)
An introduction to quality regulations - ISO 9000 and elements of total quality assurance: Deming's points, quality problem solving tools, control charts, inspection policy trade-offs, product reliability, and its life cycle cost.

ITC 391 ISO14000 - Auditing and Implementation (4)
An introduction to environmental management systems (EMS) - ISO14000 series topics include: ISO14000 series overview; labeling; EAE; LCA; environmental auditing; conformity assessment; legal and regulatory concerns; global status; preparing for, planning and implementing ISO14000; and different implementation approaches.

ITC 392 ISO9000 & TS16949 Implementing and Auditing (4)
Contains the information that an organization needs to understand the ISO9000 series, initiate the process of implementing the standards, and auditing the quality systems. Included also is information about TS16949, the American auto industry producers and additional quality system requirements on their suppliers.

ITC 405 Solid Modeling and Rapid Prototyping (2)
The fundamentals of feature based 3D Solid Modeling CAD software is explained and used. The software utilized will be “Solid Works”. Appropriate parts will be assigned for the students to create 3D CAD models. Rapid Prototyping will also be covered and parts will also be assigned as appropriate. Prerequisite: ITC 362 or basic understanding of AutoCAD.

ITC 411 Manufacturing Cost Estimation (4)
Methods for estimating the cost of manufacturing a newly designed product. Cost of various production processes. Cost-quantity relationships. Postproduction review of production methods and product design improvements. Prerequisites: ITC 311 or consent of instructor.

ITC 422 Applied Project Thesis (2)
Students, either individually or in groups, will work on a current engineering/technology problem related to their specialty. Scope includes: specification of requirements, project plan, milestone identification, implementation, and description report. An oral presentation on the thesis will be required. Course includes one hour of lecture per week. Students will work on an independent basis for the other hour.

ITC 452 Environmental Engineering Technology (3)
Introductory course in environmental science and engineering. An understanding of the basic nature of natural systems: the atmosphere, aquatic and terrestrial systems, and how technology affects these systems and can be used to minimize damaging impacts. Crosslisted with CTC 450.

ITC 462 Computer-Aided Manufacturing (4)
Basic concepts of computer-assisted manufacturing. Computer-aided process planning, materials requirement planning, machinability data bases, computer numerical control systems, group technology, and integrated manufacturing systems. Two hours of lecture and four hours of laboratory per week. Prerequisite: ITC 311 or permission of instructor. Cross listed with MTC 442.

ITC 467 Industrial Safety & Environmental Impact (2)
Occupational Safety and Health Act (OSHA) standards in industrial safety management. The impact of industry on the environment.

ITC 475 Economic Analysis in Technology (4)
Methods for choosing between alternatives based on the time value of money. Replacement studies, depreciation and after-tax analysis, risk, uncertainty and sensitivity analysis. Cross listed with CTC 475 and MTC 475. Prerequisite: MAT 121.

ITC 483 Quality Improvement (4)
A thorough study of process improvement with designed experiment, Taguchi’s Technique, and modeling & inferences about process quality. Discussion of ISO9000 and total quality management. Prerequisite: ITC 373 or STA 100/225 or permission of instructor.

ITC 484 Advanced Topics in Statistical Process Control (2)
In-depth study of Statistical process control in topics such as: Rational sampling and rational subgrouping. The power of charts for locations, control charts and correlated data, slopping control limits, process control for the short run production, difference charts, X-nominal charts, Z-charts, and other charts that are widely used in industry for controlling processes.

ITC 485 Concurrent Engineering and Design for Manufacture (4)
This course introduces and familiarizes design, production, quality, and process with latest methods in Concurrent Engineering and Design.
for Manufacture of new products. Here students will find most of the techniques of world class design and manufacture, detailed and illustrated with actual data and case studies from leading manufacturing firms. Prerequisite: ITC 373 or STA 100 or permission of instructor.

**ITC 486  Reliability for Design and Production (4)**
Study of reliability-related probability distributions, reliability testing methods, FMEA, reliability assurance, confidence limits for testing as well as manufacturing process control, reliability design, MIL-STD, maintainability, and availability. Prerequisite: ITC 373 or STA 100 or permission of instructor.

**ITC 487  Lean Design of Products and Processes (4)**
Systematic in-depth study and presentation of current best practices in the design and development of products and processes. The student will develop an understanding of product delivery systems and become knowledgeable in the corresponding best practices such as: integrated product development, lean concepts, quality practices, and the application of ISO9000 standards. In addition, the students will learn how to apply system thinking to an entire organization. Cross listed with ITC 487.

**ITC 488  Introduction to Ergonomics (4)**
A scientific study of work. Ergonomics focuses upon human capabilities and limitations with respect to the appropriate design of living and working environments. Students will learn how to design for minimizing human operator stress and fatigue, and also for promoting work output as well as productivity. Laboratory work substituted for lectures as appropriate. Prerequisites: Calculus I and Calculus II and Physics I. Cross listed with ITC 488.

**ITC 491  Independent Study (Variable 1-4)**
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

**ITC 492  Technology Internship (4)**
This course provides the student with work experience in a professional atmosphere which supplements classroom instruction. Two written reports and one oral report on the work experience are required. A minimum of 240 contact hours of industrial work is required. Prerequisite: Permission of dean.

**ITC 494  CO-OP Assignment (2 or 4)**
This course provides 14 weeks of supervised experience in an industrial or government installation, applying technology knowledge towards the solution of engineering technology problems, and developing abilities in the student’s career. At least three reports, two written and one oral, and two supervisors’ evaluations are required. May be taken repetitively up to a maximum of four credits. Permission of employer and Dean of Engineering Technology.

**Interdisciplinary Studies**

**IDS 102  Art and Culture (4)**
A study of the ways that the arts represent major cultural changes in other-World and Western cultures. Several art forms (literature, performing, or visual arts) will be studied as they mirror social history. Students will create their own versions of several of these arts, such as poems, short plays, drawing, or stories. Emphasis falls on the appreciation of each art and its cultural context, with some comparison of the traditions of other-World and West. Specific topics may vary. A reading and writing intensive seminar course; part of the Interdisciplinary Studies General Education Core.

**IDS 103  Science, Technology, and Human Values (4)**
An exploration of the interrelationships between science and technology and their social and cultural contexts. This course is a topics-based investigation that introduces students to a multi-disciplinary examination of a specific topics with the goal of developing an integrated, coherent, and well-rounded understanding of both that topic and the value of interdisciplinary inquiry. Possible topics include health and illness, food, transportation, energy, information, and other subjects. A reading and writing intensive seminar class; part if the Interdisciplinary Studies General Education Core.

**IDS 201  Perspectives on Knowledge (4)**
A critical, comparative, cross-cultural analysis of different ways of knowing. Begins by analyzing different ways humans have sought to know the truth, and by comparing and contrast- ing formal, universal ways of knowing with practical, experience based, problem oriented ways of knowing. The resulting understanding of knowledge provides the foundation for students to develop their own perspectives on knowledge. A reading and writing intensive seminar class; part of the Interdisciplinary Studies General Education Core.

**IDS 203  Introduction to Science, Technology, and Society (4)**
Explores the humanistic and social dimensions of science and technology by looking at the interactions and interrelationships among science, technology, and society. We will explore: 1) the practice of science and technology to understand how scientific and technological work are conducted as creative and human enterprises; 2) how science and technology are shaped by different social and economic forces; 3) the impact of science and technology on society; 4) ethical issues related to science and technology.

**IDS 204  Understanding Human Nature (4)**
Examines human nature from a wide variety of disciplinary perspectives including philosophy, religion, psychology, sociology, biology, and literature. It also includes an examination of the implications of the relationships between humans and technology for our understanding of human nature. Meets new General Education Humanities requirement.

**IDS 301  Monsters, Robots, Cyborgs (4)**
What is the significance of the troubling figures – the monsters, robots, and cyborgs – that haunt our collective imagination? In this course students will examine the monstrous figures and technological bodies that populate the cultural landscape, interpreting them within their social, historical, cultural, political, and intellectual contexts. Approached in this manner, we will explore how these figures reveal our anxieties about the world – anxieties about the social, political, moral, and technological orders that organize our world, and how we fit (and do not fit) within these structures and systems. Meets General Education Humanities requirement.

**IDS 302  Postmodernism and Popular Culture (4)**
Begins with a foundational overview of major theories of Postmodernism from interdisciplinary perspectives (e.g. philosophy, sociology, psychology, history, anthropology, literary studies, political science). Students will then read, discuss and apply knowledge from more specialized scholarship that discusses some popular cultural practices and artifacts. Assignments include readings, discussion, quizzes, formal and informal writing, presentations, and a midterm and/or final exam. Topics may include: film, television, celebrity, technology, social networking, and self-publishing (blogs, wikis, etc.). Fullfill General Education Humanities requirement.

**IDS 300  Selected Topics in Interdisciplinary Studies (Variable 4)**
A selected topic explored in depth from an interdisciplinary perspective. Students may receive credit for taking the course more than once provided the course has a different topic.

**IDS 400  Prominent Themes in Western Civilization Since the Renaissance (4)**
A reading and writing intensive course that examines the central themes, issues, and ideas in western civilization in the modern and postmodern eras in an interdisciplinary fashion. It incorporates knowledge from a variety of intellectual fields, including physics, biology, social science, philosophy, political science, and literature. In this course, students will read primarily original sources as well as some secondary sources. Meets new General Education Western Civilization requirement.

**IDS 401  Contemporary Worldviews (4)**
A reading and writing intensive course that studies a dominant characteristic of Western thought in the twentieth century through
Courses

interdisciplinary readings. Students will read primary sources in history, philosophy, science, literature, the visual arts, or social sciences, and will study and compare the nature of the core idea in each discipline. Possible issues to be examined include the crisis of authority, the ecological consciousness, technology and culture. Meets new General Education Western Civilization requirement.

IDS 410 Research and Critical Methods (4)
Introduction to various modes of analyzing subjects in the humanities and social sciences. Students will gain an understanding of the techniques, methodologies, and vocabularies of research methods and will become familiar with debates regarding those research methods. Students will employ several research methods to assess their preferences for approaches to subject matter, and will design and carry out an interdisciplinary final project. Topics of study include: critical theory, film and visual arts criticism, historiography, literary criticism, and social science research issues.

IDS 435 Art and Technology (4)
A study of the interaction between technological change and artistic expression. Early historical examples will be used to establish fundamental principles of art and technology as sources of cultural value. The course will emphasize twentieth century developments in imaging, including film and digital art. Students will produce their own examples of traditional and electronically mediated art.

IDS 492 Interdisciplinary Studies Internship (2-4)
Intended for Interdisciplinary Studies majors to gain practical and/or professional experience in an area related to their individual program of study. Student will work with a qualified specialist in the relevant area and will be responsible for reporting to both that specialist and to a faculty supervisor. Students wishing to enroll must have filed their program of study and completed a minimum of 12 credits in their chosen area of concentration.

IDS 499 Interdisciplinary Studies Project (4)
A capstone seminar in which students design and complete an individual project demonstration their mastery and integration of their individual Area of Concentration and the Interdisciplinary Studies core. Projects may take a range of forms appropriate to the student’s concentration and future goals, e.g., a research essay, marketing study, computer program or curriculum design. Projects must be approved by the student’s project supervisors. Students will participate in a seminar addressing research issues and will present their projects to their faculty supervisors at the end of the course.

Japanese

JPN 101 Elementary Japanese (4)
Elementary Japanese is designed for students with little or no background knowledge of the Japanese language and culture. Will provide students with basic language and cultural knowledge, strategies and skills to help them interact in real and social situations they are most likely to encounter in Japan. Students will learn basic Japanese language structures that will serve as a base for further Japanese language acquisition. Meets SUNY General Education Foreign Language requirement.

JPN 102 Intermediate Japanese (4)
This course continues the basic grammar of JAP 101 to develop proficiency in Japanese. It refines the language acquisition skills of listening, speaking, reading, and writing. Students will learn to read and write with combinations of hiragana, katakana, and kanji. The course integrates aspects of Japanese culture to broaden understanding of the language.

Management

MGT 307 Organization Behavior (4)
Managerial practices will be studied using a strong emphasis on the importance of individuals’ behaviors influencing the effectiveness of organizational performance. The course combines a review of organizational behavior, based upon theory and research in the social sciences, and a variety of individual and group activities intended to assist students in applying theory to the management of people and organizations. Subject matter includes key topics such as organization-structures, motivation, perception, conflict, communication, leadership, decision making, cultural diversity, and multinational perspectives for managers.

MGT 318 Human Resources Management (4)
Current managerial thought recognizes the importance of human resource contributions to organizational effectiveness and goal achievement. A key aspect of this course is the focus on state-of-the-art systems which support basic business objectives as well as foster good working relations between employees and managers. Topics include: human resource planning; legislative and legal requirements; staffing; performance evaluation; employee relations; and compensation. Personal computer projects are included.

MGT 320 Appraisal, Compensation & Motivation (4)
The use of compensation as a motivator is a complex issue, but of paramount importance in all organizations. Key topics include motivation theory, performance appraisal, government regulation and internal and external pay equity. Students design a pay system for a hypothetical company. Prerequisite: MGT 318. Cross listed with HRM 620.

MGT 415 Industrial and Labor Relations (4)
Managerial success in many human resource-oriented work environments demand competency in the labor relations area. Labor relations extends beyond the traditional boundaries of contracts and grievances. This course provides the necessary background to enable the student to appreciate the labor relations environment has developed; to function both formally and informally within that environment; and to understand economic, cultural and legal factors which may affect that environment in the future. Prerequisite: MGT 318 or permission of instructor.

MGT 425 Human Resource Selection & Staffing (4)
A systematic framework for understanding the process of recruitment, selection, and retention in organizations. This framework begins with planning, job analysis, and the analysis of external factors such as the legal environment. Presents recruitment sources, selection methods (e.g., structured interviews, written testing, work performance samples, validation), and staffing decision making criteria, and concludes with the issue of retention (how to keep the good employees hired). Topics include job analysis, recruitment, internal selection, external selection, testing, checking references, legal compliance, decision making, final match, and retention of employees. Prerequisite: MGT 318.

MGT 491 Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

MGT 492 Management Internship (4)
Supervised, discipline related experience in a business organization. Emphasis is on application, process, and techniques used by business to sustain business and promote growth. Specific skills and competencies needed to be a successful decision-maker will be targeted. Oversight will be provided by the School internship coordinator and the sponsoring organization. Periodic meetings with the supervisor, mid-semester evaluation, and a final, comprehensive written report are required. Prerequisite: Permission of instructor.

Management Information Systems

MIS 315 Introduction to Management Information Systems (4)
The wide availability of powerful and affordable information technologies today has made it imperative for managers and entrepreneurs to not only appreciate the role that they play in achieving organizational goals but also develop skills to deploy them for both personal and organizational competitive advantage. This course introduces students to information technologies, the common systems built using such technologies, the major
组织的流程，以及系统在组织中如何运作。这些流程包括业务智能、电子商务、硬件、软件、数据库以及电信通信等。信息安全系统的开发和管理。

**Management Science**

**MGS 411 Introduction to Management Science (4)**

一个范围广泛的技术和应用，以及商业应用在本课程中包括成本-收益分析、线性规划、简单和复杂方法、运输方法、概率概念和应用、决策理论、文库和生产模型，以及博弈理论。先决条件：MKT 301或等效课程。

**MKT 301 Marketing Management Principles (4)**

该课程涵盖了营销的各个方面，包括营销在社会和公司中的角色，营销概念、产品计划、消费行为、营销研究、渠道分布、零售、批发、定价、促销以及营销策略的制定和评估。分组讨论、案例研究，以及表单软件的利用。

**MKT 312 Marketing Management Problems (4)**

分析问题，通过研究寻求解决问题。重点放在建立营销策略的能力上，包括产品规划、定价、分销、促销，以及在现有法律框架下的服务。先决条件：MKT 301或等效课程。

**MKT 321 Advertising Management (4)**

问题的解决从理论和实际应用的角度考虑。调研了各种零售企业的结构和运营方式，以及竞争环境。其中包括：营销的范围、目标、组织和营销活动的使用，以及媒体分析等。先决条件：MKT 301或等效课程。

**MKT 345 Retail Management (4)**

零售管理从理论和实际应用的角度考虑。探讨了各种零售企业的结构和运营方式，以及竞争环境。其中包括：营销的范围、目标、组织和营销活动的使用，以及媒体分析等。先决条件：MKT 301和ACC 201或等效课程。

**MKT 365 Personal Selling (4)**

个人销售的课程包括：营销在社会和公司中的角色，营销概念、产品计划、消费行为、营销研究、促销、定价，以及营销和评价营销策略。分组讨论、案例研究，以及表单软件的利用。先决条件：MKT 301或等效课程。

**MKT 444 Direct Marketing (4)**

直接营销的课程包括：直接营销的范围、目标、组织和营销活动的使用，以及竞争环境。其中包括：营销的范围、目标、组织和营销活动的使用，以及媒体分析等。先决条件：MKT 301或等效课程。

**MKT 465 Consumer Behavior (4)**

消费者行为的课程包括：营销在社会和公司中的角色，营销概念、产品计划、消费行为、营销研究、促销、定价，以及营销和评价营销策略。分组讨论、案例研究，以及表单软件的利用。先决条件：MKT 301或等效课程。

**MKT 470 Marketing Research (4)**

营销研究的课程包括：营销研究方法的运用，以及营销信息的收集和应用。先决条件：MKT 301和STA 100或等效课程。

**MKT 491 Independent Study (Variable 1-4)**

独立研究的课程包括：在某一主题上对学生成果的监督。学生需要提交一份书面报告，其中包含对项目的描述，项目的时间、教育目标、评估方式，以及学分的分配。先决条件：获得导师和教务处的许可。

**Mathematics**

**MAT 090 Preparation for College Mathematics (0)**

作为基础，这门课程旨在帮助学生掌握基本的数学技能。它包括：基本的数学概念、几何和代数技能。仅限S/U成绩，不计入总学分。

**MAT 110 College Algebra (4)**

这门课程涵盖了用于成功的数学技能，包括：集合、多项式、因子、有理表达式、指数和对数函数、微积分和分数。这些技能将被应用到实际问题中。此课程的先决条件：高中数学或等效课程。

**MAT 111 College Mathematics (4)**

这门课程提供了一个数学背景，包括：数学概念、几何、数学分析和数据处理。它包括：对数学的逻辑和推理的运用。先决条件：MKT 301和STA 100或等效课程。

**MAT 112 Elements of Calculus (4)**

这是一门为商业、计算机科学和电信通信专业开设的终级微积分课程。它包括：微积分的概念和图形、微分规则、优化问题、换元积分、对数函数、导数、极限、以及积分的理论和应用。此课程的先决条件：MAT 110和等效课程。
MAT 115  Finite Mathematics for CS (4)
A rigorous introduction to discrete mathematics as it is used in computer science. Topics include functions, relations, sets, propositional and predicate logic, simple circuit logic, proof techniques, elementary combinatorics, and discrete probability. Prerequisite: MAT 111 or equivalent. Meets new General Education Mathematics requirement.

MAT 120  Precalculus (4)
Introduces the student to some of the fundamental concepts needed to be able to study calculus. Topics include: algebra review, functions, graphing, exponential, logarithmic, and circular functions, trigonometry, complex numbers, and vectors. Students who have previously completed MAT 121 or higher may not enroll in this course for degree credit. Prerequisite: MAT 111 or equivalent. Meets new General Education Mathematics requirement.

MAT 121  Calculus for Engineering Technology I (4)
Introduces the student to the differential calculus. Topics include: analytic geometry in a plane, functions, limits, the derivative and differentiation rules, partial derivatives, related rates, extrema, curve sketching, mean value theorem, linear approximations and parametric equations. Prerequisite: MAT 120 or equivalent. Meets new General Education Mathematics requirement.

MAT 122  Calculus for Engineering Technology II (4)
Introduces the student to the integral calculus. Topics include: the indefinite and definite integrals, areas, volumes, work, the exponential, logarithmic, inverse trigonometric, and hyperbolic functions, integration techniques, improper integrals, L'Hopital's rule, Taylor polynomials and polar co-ordinates. Prerequisite: MAT 121 or equivalent.

MAT 121  Calculus I (4)
More advanced than MAT 121, this course is required for mathematics and engineering majors, and is recommended for mathematics minors. Covers the concept of the derivative and begins the study of integration. Topics include: functions, limits, continuity, the derivative, differentiation rules, mean value theorem, related rates, extrema, curve sketching, Newton's method, linear approximations, definite and indefinite integrals, the fundamental theorem of calculus and parametric equations. Meets new General Education Mathematics requirement. Prerequisite: MAT 120 or equivalent. MAT 121 and MAT 151 cannot both be taken for credit. Restricted to Applied Mathematics and Electrical Engineering Majors only.

MAT 152  Calculus II (4)
More advanced than MAT 122, this course is required for mathematics and engineering majors, and is recommended for mathematics minors. Continues the study of integration and also includes infinite series. Topics include: integration techniques, transcendental functions, applications of integration, conic sections, L'Hopital's rule, improper integrals, sequences and series, and polar co-ordinates. Meets new General Education Mathematics requirement. Prerequisite: MAT 121 or permission of instructor. MAT 152 and MAT 122 cannot both be taken for credit. Restricted to Applied Mathematics and Electrical Engineering Majors only.

MAT 225  Applied Statistical Analysis (4) (Cross Listed with STA 225)
Deals in depth with statistical methods used to analyze data. Applications are drawn from many diverse areas. Topics include: measures of location and scale for frequency distributions, addition and multiplication laws for probability, the binomial, Poisson, and normal distributions, inferences about proportions and location parameters in one-sample and two-sample problems, analysis of completely randomized and randomized blocks designs, simple linear regression and correlation, sign test, median test, rank sum test, and signed rank test. Prerequisites: Calculus II (MAT 152) or Calculus II for Engineering Technologies (MAT 122).

MAT 230  Differential Equations (4)
An introduction to the theory of ordinary differential equations and matrices. The emphasis is on the development of methods important in engineering and the physical sciences. Topics include: theory and applications of first order and second order differential equations, Laplace transform method, matrix algebra, determinants, Cramer's rule, eigenvalues, and systems of linear differential equations. Prerequisite: MAT 122 or equivalent.

MAT 253  Calculus III (4)
Many properties of systems studied in applied science are functions of several variables or vector valued functions. This course develops the calculus of such functions. Topics include: vectors and vector valued functions, analytic geometry in space, functions of several variables, partial differentiation, the gradient, maxima and minima, Lagrange multipliers, and multiple integrals, line and surface integrals, Stokes and Divergence theorems. Prerequisite: MAT 122 or equivalent.

MAT 260  Ordinary Differential Equations and Series Solutions (4)
The course will allow students to become familiar with the subject of differential equations. It covers methods of solutions such as: separation of variables, integrating factor, reduction of order. Differential equations with constant and variable (Cauchy-Euler) coefficients are treated as well as series solutions of differential equations are introduced (method of Frobenius, Bessel and Legendre equations). Laplace transform of system of Linear first order equations are covered. Examples of applications of differential equations in physics, engineering are given. Prerequisite: MAT 152.

MAT 290  Topics in Mathematics (1-4)
An introductory course in selected topics in Mathematics not currently covered in any of the listed classes. Topics are chosen to illustrate different fields and applications which are all part of mathematics.

MAT 335  Mathematical Modeling (4)
Designed to teach the student some of the skills necessary to construct and critique mathematical models of physical and industrial processes. The student will apply skills acquired in MAT 230 to the models presented. Topics include: applications of first and second order ordinary differential equations, systems of nonlinear ordinary differential equations, stability, phase plane analysis, optimization, conservation laws and finite differences. Prerequisite: MAT 230 and familiarity with a computer language, or permission of instructor.

MAT 340  Linear Algebra (4)
Many systems studied in science, engineering, and computer science involve a linear relationship among many variables. Linear algebra is the mathematical description of such problems. Topics include: systems of linear equations, Gaussian elimination, matrices, determinants, Cramer's rule, vector spaces, linear transformations, eigenvalues and eigenvectors. Prerequisite: MAT 121 or permission of instructor.

MAT 345  Introduction to Graph Theory (4)
Provides students with an introduction to graphs and their properties. Topics include graphs and digraphs, eulerian and hamiltonian graphs, connectivity, planarity, shortest path problems, trees, and coloring. Attention will be paid to theorems and their proofs. Applications will be given throughout the course. Prerequisite: MAT 122 or MAT 413.

MAT 370  Applied Probability (4)
An introduction to the theory of probability and its applications. Topics include: basic set theory, elementary probability, counting arguments, conditional probability and independence, random variables and their properties, functions of random variables, distribution functions, probability models and applications such as stochastic processes. Prerequisite: MAT 122.

MAT 380  Abstract Mathematics: An Introduction (4)
An introduction to rigorous mathematics. Students will be exposed to the building blocks of mathematical theory – axioms, definitions, theorems, and proofs. The emphasis will be on constructing proofs and writing clear mathematics. The language and methods of mathematics will be explored while introducing students to the basics of set theory, number theory, topology on the real line, and functions. Prerequisite: MAT 122.
MAT 381 Modern Algebra (4)
An introductory course in Abstract Modern Algebra. Topics will include elementary theory of groups, rings, and fields: Groups, Subgroups, Quotient Groups, Symmetry, Rings, Fields, and Extension Fields. We will explore connections between Modern Algebra, Number Theory and Linear Algebra. SUNYIT mathematics course at 200 level or higher excluding MAT 225 or permission of the instructor.

MAT 401 Series and Boundary Value Problems (4)
Introduces advanced mathematical methods used to solve certain problems in engineering and the physical sciences. Topics include: sequences and series, Fourier series and transforms, series solutions of ordinary differential equations, partial differential equations, and solution of some boundary value problems. Prerequisite: MAT 225 or equivalent.

MAT 413 Discrete Mathematics for Computer Science (4)
Background to understanding computer science as the science of clear and concise descriptions of computable, discrete sets. Provides conceptual tools useful for any advanced study in computer science. Topics include: review of set theory, logic and relational calculus, algebraic structures (lattices, Boolean algebra, semi-groups, groups, rings, etc.) and morphisms and their application in computer science (automata theory, coding, switching theory, etc.), formal languages and their acceptors, and elements of information theory and of the theory of computability. Prerequisite: MAT 115.

MAT 420 Complex Variables and their Applications (4)
An introductory study of functions involving complex numbers. Subjects are selected based upon their importance in mathematics, science, and engineering applications. Included are complex numbers, complex functions, analytic functions, complex integration, infinite series, residue theorem, contour integration, conformal mapping and application of harmonic functions. Prerequisite: MAT 122 or equivalent.

MAT 423 Vector and Tensor Calculus (4)
Vector and tensor calculus is a fundamental area of mathematics, and is used extensively in science, engineering, and technology. The methods developed in this course include: the gradient, curl, and divergence, the del operator in general curvilinear coordinates, covariant differentiation, line integrals, surface integrals, Gauss’s theorem, Stokes’s theorem, Green’s theorem, and the divergence theorem. Selected applications will be included from fluid and continuum mechanics, and from electromagnetism. Prerequisite: MAT 253 or equivalent.

MAT 425 Real Analysis (4)
Introduces the student to a rigorous development of the real number system and the theory of Calculus on the real number line. Topics include: basic set theory, the real number system, sequences and series, limits and continuity, the derivative, the Riemann Integral, the Fundamental Theorem of Calculus, and sequences and series of functions. Prerequisite: MAT 381.

MAT 430 Number Theory and Its Applications (4)
Introductory course in Number Theory that will introduce students to the basic concepts as well as some modern applications. Topics include: prime numbers, Greatest Common Divisors, The Euclidean Algorithm, congruences, Fermat’s Little Theorem, primality testing, etc. Applications of Number Theory: cryptography, pseudorandom numbers, etc. Prerequisite: MAT 380 or MAT 381 or MAT 413 or permission of the instructor. Cross listed with 530.

MAT 450 Partial Differential Equations (4)
A study of Partial Differential Equations, or Pde’s, and their applications in science and engineering. The basic development of physical models leading to partial differential equations is discussed. Solution methods and basic theory are presented. Topics include: first-order Pde’s, method of characteristics, the canonical second order Pde’s, separation of variables, Hilbert space methods, finite difference methods. Prerequisites: MAT 253 and MAT 401.

MAT 460 Numerical Differential Equations (4)
Fundamental mathematical methods associated with the numerical solution of ordinary and partial differential equations are investigated. Algorithms emphasizing both standard and newly developed methodologies are developed in the context of theoretical and practical considerations. Mathematical questions such as convergence, accuracy, and appropriateness of method are developed in a systematic manner. A variety of mathematical models and problems of current interest are used to emphasize many of the core results. Students will learn to develop their own algorithms and to use algorithms from existing high quality numerical libraries. Many of the models studied in this course will come from both standard mathematical models and topics related to current faculty research interests. Topics include: Runge-Kutta methods, finite difference techniques, finite element techniques, approximation methods, error estimation, and accuracy. Prerequisites: MAT 335 and MAT 450 and familiarity with a programming language.

MAT 490 Selected Topics in Mathematics (Variable 1-4)
An in-depth treatment of a selected topic not normally treated extensively in other mathematics courses. Prerequisite: Permission of instructor.

MAT 491 Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

MAT 492 Applied Mathematics Internship (4)
The internship is available to qualified Applied Mathematics majors. It is designed to provide students with an opportunity to integrate academic and practical experience in an industrial setting in a field related to mathematics. Before the internship is approved, the student, the employer, and a Mathematics faculty member develop a contract concerning the nature of the internship. Weekly reports and a final presentation are required for the internship. Prerequisites: 3.0 or better GPA in major and approval of Applied Mathematics faculty.

Mechanical Engineering Technology

MTC 101 Introduction to Engineering Technology (2)
Required for all freshmen in Mechanical Engineering Technology. Topics include academic requirements, advisement, software packages, career opportunities, and project management. Additional topics include professional, ethical and social responsibilities; respect for diversity and a knowledge of contemporary professional, societal and global issues; and a commitment to quality, timeliness and continuous improvement. Cross listed with CTC/ITC 101.

MTC 111 Manufacturing Processes (4)
Machining and non-machining methods of processing materials into manufactured components will be discussed. Both traditional and non-traditional machining processes are covered. Machine shop equipment and practices, along with different types of tooling, will be reviewed. Cross listed with ITC 111. Two hours of lecture and four hours of laboratory per week. Prerequisite: MTC 162.

MTC 136 Material Science Applications (2)
Composition, structure, and behavior of metallic and non-metallic materials, and their effect on the physical, mechanical, and electrical properties of that material. Analysis of crystalline structure, physical properties, and service analysis of materials for physical, mechanical, and electrical properties.

MTC 162 Computer Aided Design (4)
The use of AutoCAD software to develop geometric models for engineering technology applications. Blue print reading and basic drawing fundamentals. Basic geometric dimensioning and tolerancing. Introduction to the creation and visualization of three-dimensional models. Four hours of lecture per week. Laboratory activity will be substituted for lecture as appropriate. Cross listed with CTC 162.

<tr>
<th>COURSES</th>
<th>COURSES</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>MTC 198</strong> Industrial Instrumentation (2)</td>
<td>A freshman-level course that teaches the fundamentals of devices and methods used to instrument industrial processes and commercial products. Focuses on conventional instruments, electro-mechanical transducers, and computer-based data acquisition equipment and techniques. Two hours of lecture per week, with laboratory work substituted for lecture as appropriate. Prerequisite: Introductory Physics, Algebra, and Trigonometry. Students who completed this course cannot take MTC 398 for credit. Cross listed with ITC 198.</td>
</tr>
<tr>
<td><strong>MTC 210</strong> Introductory Heating, Ventilating and Air Conditioning (HVAC) (2)</td>
<td>Topics include principles of fluid mechanics, thermodynamics and heat transfer relevant to HVAC, concepts of air conditioning, principles of mechanical refrigeration, psychrometrics and load estimating. Two hours of lecture per week.</td>
</tr>
<tr>
<td><strong>MTC 215</strong> Sustainable Energy Systems (2)</td>
<td>An introduction to sustainable energy systems. Topics include solar energy, wind energy, fuel cell technology, biomass energy, geothermal energy, clean coal technology, ocean energy, hydraulic power, and nuclear power. Two hours of lecture per week. Cross listed with ETC 215 and CTC 215.</td>
</tr>
<tr>
<td><strong>MTC 216</strong> Statics (2)</td>
<td>Analysis of equivalent systems of forces, free body diagrams, equilibrium of particles and rigid bodies, centroids, friction, and forces in structures. Two hours of lecture per week, with laboratory work substituted for lecture as appropriate. Prerequisites: PHY 101 and MAT 120. Cross listed with ITC 216 and CTC 216.</td>
</tr>
<tr>
<td><strong>MTC 220</strong> Introductory Hydrogen and Fuel Cell Technology (2)</td>
<td>Topics include working principles of fuel cells, types of fuel cells, hydrogen production, hydrogen safety, hydrogen engines and vehicles, hybrid solar hydrogen car and hydrogen economy. Two hours of lecture per week.</td>
</tr>
<tr>
<td><strong>MTC 222</strong> Strength of Materials (2)</td>
<td>Effect of shape and composition on strength of materials. Moments of inertia, shear forces and bending moments in beams, torsion of shafts, thermal expansion, and pressure vessels. Two hours lecture per week, with laboratory work substituted for lecture as appropriate. Prerequisites: PHY 101 and MAT 120. Cross listed with ITC 222.</td>
</tr>
<tr>
<td><strong>MTC 261</strong> Introductory Fluid Mechanics (4)</td>
<td>Introduction to fluid mechanics, fluid properties, fluid statics and dynamics, pressure variation in flowing fluids, drag and lift, applications of fluid mechanics. Three hours of lecture and two hours of laboratory per week. Students may not receive credit for both MTC 261 and MTC 461. Cross listed with ITC 261.</td>
</tr>
<tr>
<td><strong>MTC 290</strong> Introduction to Nanotechnology (2)</td>
<td>An introductory course covering fundamentals of nanotechnology and its applications. Course content will cover diverse nanosystems including carbon nanotubes, semiconductor quantum dots, nanosensors, molecular machines, and nanomedicine. Prerequisite: one course in Physics or permission of the instructor. Cross listed with ETC 290.</td>
</tr>
<tr>
<td><strong>MTC 301</strong> Professionalism in the Workplace (2)</td>
<td>Topics include lifelong learning; professional, ethical and social responsibilities; respect for diversity and a knowledge of contemporary professional, societal and global issues; and a commitment to quality, timeliness, and continuous improvement. Cross listed with ITC 301 and CTC 301.</td>
</tr>
<tr>
<td><strong>MTC 308</strong> Mechanical Components (4)</td>
<td>Fundamental principles of design, working stresses, analysis and design of mechanical components such as shafting, springs, screws, belts, and chains. Four hours of lecture per week, with laboratory work substituted for lecture as appropriate. Prerequisites: MTC 218 and MTC 222 or equivalent, or permission of instructor.</td>
</tr>
<tr>
<td><strong>MTC 320</strong> Applications Project I (2)</td>
<td>Individual student designed project in a major field, includes: written specifications of project requirements, project plan, milestone identification, implementation, and descriptive report. An oral presentation regarding the project is required. Course includes a one-hour lecture per week. Students will work on an independent basis for the other hour.</td>
</tr>
<tr>
<td><strong>MTC 321</strong> Applications Project II (2)</td>
<td>Individual student designed project in a major field, includes: written specifications of project requirements, project plan, milestone identification, implementation, and descriptive report. An oral presentation regarding the project is required. Course includes a one-hour lecture per week. Students will work on an independent basis for the other hour.</td>
</tr>
<tr>
<td><strong>MTC 327</strong> Production &amp; Operations Management (4)</td>
<td>Modern production and operations management in an industrial setting. Planning, organizing, and controlling using the relevant qualitative and quantitative approaches. Covers topics such as forecasting, capacity requirement, planning, work standards, scheduling, fundamentals of inventory control, and material requirement planning. Cross listed with ITC 327.</td>
</tr>
<tr>
<td><strong>MTC 330</strong> Assistive Technology (2)</td>
<td>Introduction to the fundamentals of assistive technology for people with physical disabilities. Rehabilitation engineering with an emphasis on mechanical devices used to enhance mobility and manipulation, improving physical interaction with the environment. Topics include prosthetics, manual wheelchairs, power wheelchairs, and alternative methods for computer access. Two hours of lecture per week. Cross listed with ITC 330.</td>
</tr>
<tr>
<td><strong>MTC 350</strong> Solar Energy Technology (2)</td>
<td>Introduction to solar energy, insolation, fundamental principles of thermodynamics and heat transfer relevant to solar energy applications. Study of the working principles of solar collectors, heating and cooling systems. Application of solar energy for power generation in space. One hour of lecture and two hours of laboratory per week.</td>
</tr>
<tr>
<td><strong>MTC 352</strong> Thermodynamics (2)</td>
<td>Energy determination science for fluids systems. Enthalpy, entropy, and internal energy properties. Problems in energy state change, steady flow within elementary mechanical systems, and the measurement of energy.</td>
</tr>
<tr>
<td><strong>MTC 362</strong> Experimental Stress Analysis (4)</td>
<td>Empirical determination of stresses in mechanical components. Static and dynamic stress analysis of combined tension, torsion, and bending loads. Use of commercial instrumentation. Three hours of lecture and two hours of laboratory per week.</td>
</tr>
<tr>
<td><strong>MTC 363</strong> Mechanisms Analysis and Design (4)</td>
<td>The kinematic study of mechanisms, including velocity and acceleration analysis of linkages, cams, and gears in mechanical systems. Introduction to inertia forces in uniform motion machinery. Prerequisites: MTC 218 and MAT 122 or equivalents.</td>
</tr>
<tr>
<td><strong>MTC 373</strong> Statistical Quality Control (4)</td>
<td>Modeling and inferences of process quality. Philosophy and methods of statistical process control and quality improvement in the modern business environment. Techniques for quality troubleshooting, decision-making, and implementation. Review of basic concepts or statistics will be included. Prerequisite: STA 100 or STA 225 or permission of instructor. Cross listed with ITC 373.</td>
</tr>
<tr>
<td><strong>MTC 388</strong> Fundamentals of Solid Modeling with Pro/Engineer (2)</td>
<td>Detailed study of creating three-dimensional solid models of mechanical components using Pro/Engineer. Topics include feature-based modeling, protrusion, sweeps, blends, and assembly drawings. One hour of lecture and two hours of laboratory per week.</td>
</tr>
</tbody>
</table>
MTC 392  Microelectromechanical Systems (MEMS) (2)
This course introduces the student with the emerging field of microelectromechanical systems (MEMS) based nanotechnology. Topics will include introduction of nanoscale systems, methods of fabrications and packaging of MEMS, principle of microactuation, visualization, and applications of nano and micro systems. Prerequisite: One course in Physics or permission of the instructor. Cross listed with ETC 392.

MTC 398  Mechanical Measurements (4)
A junior-level course on devices and methods for measuring mechanical phenomena such as temperature, pressure, speed, displacement, acceleration, and force. Uncertainty, accuracy, and precision of measurements are presented. Focuses on electro-mechanical transducers and computer-based data acquisition techniques, experimental methods, analysis of collected data, and computer generation of technical reports. Laboratory activity will be substituted for lecture as appropriate. Students who have taken ITC/MTC 198 may not register and receive credit for MTC 398. Prerequisites: Introductory Physics, Algebra, Trigonometry.

MTC 405  Solid Modeling and Rapid Prototyping (2)
The fundamentals of feature based 3D Solid Modeling CAD software is explained and used. The software utilized will be “Solid Works”. Appropriate parts will be assigned for the students to create 3D CAD models. Rapid Prototyping will also be covered and parts will also be assigned as appropriate. Prerequisite: ITC/MTC 162 or basic understanding of AutoCAD.

MTC 420  Capstone Experience (2)
Student-designed project in a focused mechanical area. Includes written specifications of project requirements, literature review, planning, milestone identification, implementation, and a comprehensive written report. Projects must have a well-documented teamwork component. An oral presentation of the complete project is required. Course includes a one-hour lecture per week; students work on an independent basis for the other hour. Student must have senior status.

MTC 430  Engineering Dynamics (4)
Kinematics of particles, lines, and bodies, and the kinetics of particles and of rigid bodies with translation, rotation, and plane motion using the methods of force-mass- acceleration, work-energy, and impulse-momentum. Three hours of lecture and two hours of laboratory per week. Prerequisite: MAT 122 or equivalent.

MTC 442  Computer-Aided Manufacturing (4)
Basic concepts of Computer Assisted Manufacturing. Computer aided process planning, material requirement planning, machinability data bases, computer numerical control systems, group technology, and integrated manufacturing systems. Requires two hours of lecture and four hours of laboratory per week. Prerequisites: MTC 308 or MTC 362, and Calculus II, or permission of instructor.

MTC 450  Solar Energy Concepts (4)
Energy resources, energy consumption patterns, and future energy supplies. Physical, technical, and economical aspects of solar energy as a present and future source of energy. State-of-the-art applications of solar energy to domestic household applications. Four-hour lecture per week, with laboratory work substituted for lectures as appropriate.

MTC 454  Engineering Heat Transfer (4)
Introduction to heat transfer, steady state conduction-one & multi dimensions, unsteady state conduction, principles of convection, heat exchangers, condensation and boiling heat transfer, mass transfer, radiation heat transfer, special topics in heat transfer. Three hours of lecture and two hours of laboratory per week. Prerequisites: MTC 352 or equivalent, or permission of instructor. Students who have taken MTC 451 and/or MTC 452 may not register for MTC 454 for additional degree credit.

MTC 455  Laser Technology (2)
Analysis of basic laser fundamentals, including optics and laser hardware. Operational characteristics of specific laser systems. Two-hour lecture per week, with laboratory work substituted appropriately.

MTC 461  Fluid Mechanics and Systems (4)
Introduction to fluid mechanics. Study of the principles of statics and dynamics applied to fluids. Some of the topics covered are: Pressure variation in fluids, flow in conduits, flow measurements, special topics in fluid mechanics, etc. Three hours of lecture and two hours of laboratory per week. Students may not receive credit for both CTC 461 and MTC 461.

MTC 462  Turbomachinery (4)
Application of the laws of thermodynamics and fluid mechanics to cascades, axial flow turbines and compressors, centrifugal pumps, fans and compressors, and radial flow turbines. Four-hour lecture per week with laboratory work substituted for lecture as appropriate. Prerequisites: MTC 352 and MTC 461 or permission of instructor.

MTC 464  Vibration Analysis (4)
Methods for computing natural frequency of mechanical vibrations in machinery. Damped and forced vibrations of two dimensional, linear, or linearized systems, using both theoretical and instrumental investigations. Analysis of absorbers and isolators. Prerequisites: MTC 218, MTC 222, and MAT 230.

MTC 465  Advanced Machine Design (4)
In-depth study of major mechanical elements. Topics include: steady loading, variable loading, flexible elements, clutches, brakes, failure prevention theories, and metal fatigue. Students are expected to integrate course material as well as previous experience into a major mechanical design project. Prerequisites: MTC 218 and MTC 222, MTC 308 or MTC 362, and Calculus II, or permission of instructor.

MTC 466  Wind Turbines (4)
Introduction to Wind Turbines. Topics include: wind resources, aerodynamic principles, blade manufacture, control methods, performance testing, ecological effects, planning and regulations for wind energy development. Prerequisite: MTC 461 or equivalent or permission of the instructor. Four hours lecture per week.

MTC 467  Computer-Aided Design and Drafting (4)
Topics included for study are displaying equations, vector presentation of curves, creating a mathematical formulation, splines, and parametric techniques. Engineering geometry on the computer and basics of three-dimensional geometry are included. Engineering applications on totally supported and independent interactive computer graphics system is presented. Requires two hours of lecture and four hours of laboratory per week. Prerequisites: CSC 300 and MTC 306 or equivalent or permission of instructor.

MTC 470  Mechanisms of Flow and Fractures in Machine Components (4)
The nature of plastic flow and the fracture in solids, applications to the propagation of cracks and failures in machine components. Roles of strengthening mechanisms to reduce failure will be emphasized. Laboratory exercises may be substituted for lecture when appropriate. Prerequisites: MTC 218, MTC 222 and MTC 366 or equivalents.

MTC 471  Space Technology (2)
The course addresses the application of some of the well known principles of science and engineering in space technology. The particular topics covered are: spacecraft structure, power systems, propulsion systems, fundamentals of spacecraft dynamics, orbital maneuvers, attitude maneuvers and control systems, spacecraft testing. Students will research an individually selected topic on space technology and make written and oral presentations on it. Prerequisite: PHY 101 or equivalent or permission of instructor.

MTC 475  Economic Analysis in Technology (4)
Methods for choosing between alternatives based on the time value of money. Replacement studies, depreciation and after-tax analysis, risk, uncertainty and sensitivity analysis. Cross listed with ITC 475 and CTC 475. Prerequisite: MAT 121
MTC 476 Finite Element Applications (4)
Concepts of finite element analysis and their applications. Analysis of structure, plate, shell, pipes, plane stress and plane strain. Extensive use of FEA software packages: ALGOR. Three hours of lecture and two hours of laboratory per week. Prerequisites: MAT 122, MTC 218 and MTC 222, and a formal course in computing or permission of instructor.

MTC 478 Computational Fluid Dynamics (CFD) (4)
The course addresses some of the fundamental aspects of computational Fluid Dynamics (CFD). The specific topics covered in the course are: The Governing Equations of Fluid Dynamics, Mathematical Behavior of Partial Differential Equations, Basic Aspects of Discretization, Grids with appropriate Transformations, CFD Techniques: The Lax-Wendroff technique, MacCormack’s technique, some applications: One-dimensional Nozzle Flows, Two-Dimensional Supersonic Flow-Prandtl-Meyer Expansion Wave, Incompressible Couette Flow, Navier-Stokes equations. Prerequisites: MTC 352 and 461 and MAT 230 or equivalent or permission of instructor.

MTC 487 Lean Design of Products and Processes (4)
Systematic in-depth study and presentation of current best practices in the design and development of products and processes. The student will develop an understanding of product delivery systems and become knowledgeable in the corresponding best practices such as: integrated product development, lean concepts, quality practices, and the application of ISO 9000 standards. In addition, the students will learn how to apply system thinking to an entire organization. Cross listed with ITC 487.

MTC 488 Introduction to Ergonomics (4)
A scientific study of work. Ergonomics focuses upon human capabilities and limitations with respect to the appropriate design of living and working environments. Students will learn how to design for minimizing human operator stress and fatigue, also for promoting work output as well as productivity. Laboratory work substituted for lecture as appropriate. Prerequisites: Calculus I and Calculus II and Physics I. Cross listed with ITC 488.

MTC 491 Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

MTC 493 Computer Integrated Manufacturing (4)
This course addresses some of the fundamental aspects of computer integrated manufacturing. The specific topics include: CIM units: computers, input/output, the robot, material handling, computer-aided functions; system design, design of the data base, material requirements planning (MRP), manufacturing resource planning (MRP II), the human factors of CIM. Requires two hours of lecture and four hours of laboratory per week. Prerequisite: MTC 467 or equivalent or permission of instructor.

MTC 494 CO-OP Assignment (2 or 4)
This course provides 14 weeks of supervised experience in an industrial or government installation, applying technology knowledge towards the solution of engineering technology problems, and developing abilities required in the student’s career. At least three reports, two written and one oral, and two supervisors’ evaluations are required. May be taken repetitively up to a maximum of four credits. Prerequisite: Permission of employer and Dean of Engineering Technology.

Music

MUS 301 SUNY Jazz (1)
Introduces students to the performance of jazz in an ensemble. Study of basic jazz theory and improvisational techniques. Analysis of musical styles and performers. Students will rehearse ensemble works and perform in a public setting. Prerequisite: Instructor’s permission, based on student’s ability to perform a musical instrument appropriate to jazz performances. Meets new General Education Arts requirement.

Network and Computer Security

NCS 181 Introduction to Cybersecurity (4)
Introduction to the field of information system security. The kinds of information system security threats that might be faced by home and/or small business users and prudent security countermeasures used to counteract them are covered. Security issues faced by users of information systems will be explained as well as the potential damage the may cause. Provides the student with knowledge necessary to protect themselves against many of the information systems security threats faced in everyday life.

NCS 210 Telecommunications Transmission Technology (4)
This course will familiarize students with the three principal transmission technologies used in data communications: copper wire, fiber optics, and radio frequency wireless. Each physical layer medium is covered in detail to understand the nature of the communications channel it provides, and the impairments that affect data communications signals. Transmission media standards, signaling, loss budgets, and the relative advantages and disadvantages of each transmission technology will be treated in detail.

NCS 310 Hardware and Network Infrastructure (4)
Conceptual and practical study of the computer hardware, connectivity devices, and other supporting artifacts that comprise enterprise internal information systems and external systems like the public internet. Topics include: fundamental digital logic; common integrated ships and boards for computer organizational execution of processor instructions; device interfacing peripheral devices; common abstractions for enabling software development; major functions of an operating systems; common connectivity devices and their operation. Prerequisite: CS 108

NCS 315 Networking of Information Systems (4)
An integrated study of fundamental principles and representative technologies underlying computer and device networks. Topics include: key networking protocols and relevant implementation stacks; interconnection devices; sample distribution software frameworks; management issues in networked computers and peripherals; deployment requirements for distributed software applications; common tools for the management of networks and distributed software. Prerequisite: IS 310.

NCS 316 Data Network Design (4)
Data network design issues and applications, point-to-point network design, multipoint network design, data collection and verification, and an overview of protocols. Network design tools such as ITGURU and OPNET are used for network design and simulation. Use of simulation results to design a private line or packet switched based data communications network. Three hours of lecture and one hour of laboratory per week. Prerequisites: NCS 315 and STA 100.

NCS 320 Information Assurance Fundamentals (4)
A fast paced introduction to the field of Information Assurance. The various kinds of threats that might be faced by an information system and the security techniques used to thwart them are covered. Hacker methods, viruses, worms, and system vulnerabilities are described with respect to the actions that must be taken by a Network Manager to combat them. The basics of cryptography are covered including hash functions, symmetric cryptography, public key cryptography, cryptography algorithms, and cryptographic applications in computer and network security. Prerequisites: CS 108, and NCS 181 or equivalent.

NCS 330 Information Assurance Ethics, Policies and Disaster Recovery (4)
This course covers the development of information systems security policies for small and large organizations with specific regard to components such as email, web servers, web browsers, firewalls, and personal applications. The course covers cyber ethical standards for information system users and administrators, and their role as a driver in developing disaster recovery plans and procedures are also covered. Prerequisites: NCS 181 or equivalent.
NCS 350  Wireless Systems and Security (4)
Investigation of technologies, networks, standards and services of wireless systems in the context of satellite, cellular, wireless local area networks (802.11), personal area networks (Bluetooth and Zigbee) and metropolitan networks (WiMax). Specific topics to be examined include network design and infrastructure, 2G/3G cellular standards, wireless media access control protocols, wireless network routing, congestion control, location management, and security in wireless networks. Prerequisites: NCS 210 and NCS 315.

NCS 383  Network Firewalls (4)
Teaches the student the basic design of firewalls and provides actual hands-on experience with a popular enterprise firewall. The need for firewalls is also covered. Builds upon the foundations of Information Assurance presented in NCS 320, Information Assurance Fundamentals. Provides more detailed background and skills in the area of firewalls for those individuals who seek employment in the areas of network and data security. Prerequisites: NCS 315 and NCS 320.

NCS 384  Network Intrusion Detection (4)
The need for intrusion detection systems (IDS) is described. Several basic IDS design approaches and implementation methods are presented. Basic attack methods employed by network attackers and the resulting signatures are explained. The business case for justifying the acquisition of IDS is explored. Builds upon the foundations of Information Assurance covered in NCS 320. Provides additional background and skills in the area of network IDS for those students interested in the areas of network and data security. Prerequisites: NCS 315 and NCS 320.

NCS 416  Digital and Internet Telephony (4)
Consists of both lecture and application oriented lab assignments. Emphasizes digital and internet telephony fundamentals including the convergence of voice, data and multimedia communications using the Internet Protocol. Three hours of lecture and two hours of laboratory. Prerequisite: NCS 210 and NCS 315.

NCS 425  Internetworking (4)
Intended to introduce new content and extend previously learned networking skills which will empower students to enter the workforce and/or further their education in the area of telecommunications networking. A task analysis of current industry standards and occupational analysis is used in the development of content standards. Instruction introduces and extends the student's knowledge and practical experience with switches, Local Area networks (LAN's) and Virtual Local Area Networks (VLAN's) design, configuration and maintenance. Students develop practical experience in skills related to configuring LAN's, WAN's, routing protocols and network troubleshooting. Prerequisite: IS 315.

NCS 435  Computer Forensics (4)
Introduction into the field of computer forensics in networked systems. The student will receive training in the methods, techniques and tools used by those practicing computer forensics in support of audit, security privacy and legal functions. Specific legal issues regarding seizure and chain of custody will be addressed. Students will have opportunity to learn computer forensics applications, methods and procedures through hands-on lab activities. Prerequisites: NCS 210, NCS 315, NCS 320.

NCS 450  Network Security (4)
Detailed coverage of network threats, vulnerabilities and security protocols as countermeasures to advance the students' understanding of computer security, network security, e-mail and internet security. Focus is on security issues across the entire network protocol stack from the physical to the application layer. Specific topics include physical layer security, secure routing protocols, IPSec, SSH, TLS, Web security, authentication and key management, and network borne malware such as worms and viruses. Prerequisites: NCS 315.

NCS 460  Advanced Wireless Security (4)
Provides advanced coverage of wireless networks and the special security problems they pose. Topics include measures taken to secure wireless personal area networks (PAN's), wireless LAN’s, cellular wireless networks, and ad-hoc wireless networks. Threats, vulnerabilities and countermeasures specific to each type of networks will be enumerated and studied in detail. Coverage includes the use of cryptography and cryptographic primitives in secure protocols, wireless device security, and security policy management. The treatment of ad-hoc wireless network security will cover secure routing protocols and intrusion detection systems. Prerequisites: NCS 350, NCS 450.

NCS 490  Special Topics in Network and Computer Security (4)
An in-depth study of selected topics based on: new developments in the field, more in-depth treatment of topics than covered in regular courses, or topics not normally covered in an undergraduate program in Network and Computer Security. Prerequisites: NCS 210, NCS 320, and permission of the instructor.

NCS 494  Network and Computer Security Internship/Co-op (2 or 4)
Part-time supervised experience in a professional atmosphere which supplements classroom instruction. Two written reports on the work experience, two supervisor's evaluations and one site interview required. Required contact hours min. 150. Prerequisite: Permission of instructor.

NCS 495  Network and Computer Security Capstone (2)
Offers students the opportunity to demonstrate knowledge of network and computer security by completing and presenting a significant project. The topic should be of contemporary significance in the field. Periodic written and oral examinations are required. Prerequisites: Permission of the instructor.

Nursing

NUR 303  Transition in Professional Nursing Practice (2)
An empirical foundation within the discipline of nursing is essential to the development of professional nursing practice. Critical reflection, caring, independent judgment, collaboration, research, and lifelong learning are fostered to enhance the development of professional excellence in nursing. Professional role development in nursing and a synthesis of practical approached to facilitate the nursing student's transition form the basic preparation to baccalaureate nursing education are examined within this course. Reflection and articulation of values and ideals within the self and profession are encouraged and described within personal philosophies of nursing and meaningful nursing practice.

NUR 313  Theoretical Bases for Professional Nursing Practice (4)
A theoretical and empirical foundation within the discipline of nursing is essential to the development of professional nursing practice. Selected nursing theories and standards of practice described in the New York State Education Law and the American Nurses' Association (ANA) Standards of Nursing Practice are introduced to guide the development of professional nursing practice. Critical reflection, caring, independent judgment, collaboration, research, and lifelong learning are fostered to enhance the development of professional excellence in nursing. Theories of nursing, models of caring, principles of teaching/learning, role theory and development, and health promotion and wellness are explored to develop understanding of the mutual and interactive relationship of nursing to people, health, communities, and health care delivery environments. Reflection and articulation of values and ideals within the profession and self are encouraged and described within personal philosophies of nursing and meaningful nursing practice.

NUR 314  Comprehensive Health Assessment (4)
Assessment of individuals across the life span is addressed as they experience wellness and illness. The focus is on the interrelatedness of the physical, psychological, social, cultural, spiritual, and environmental components of health assessment of people as they interact with their environment. Utilizing the framework of selected nursing theories, an analytical and comprehensive assessment of the individual's health is emphasized. The relationship of health assessment knowledge, skill, and disposition fostered by the Standards of Nursing Practice and the New York State Education Law is explored within the context of accountability for professional practice.

SUNYIT Undergraduate Catalog 2011-2013 121
and responsibility of professional nursing practice. Critical thinking skills are enhanced as the student develops a beginning level of competency in physical and psychological assessments within faculty supervised laboratory settings with well individuals. Therapeutic communication skills are also facilitated throughout the attainment of personal health data and the formulation of nursing diagnoses. Prerequisites: Microbiology, Human Anatomy & Physiology I & II. Pre/Corequisites: BIO 350.

NUR 320A Nursing Theory for Professional Nursing Practice (2)
Provides the theoretical and empirical foundation of beginning professional nursing practice for students in the accelerated, BS/MS program. Focus is on the examination of nursing theories and models as the theoretical framework for the discipline of nursing. Standards of practice described in the New York State Education Law and the American Nurses’ Association (ANA) Standards of Nursing Practice are examined as a guide for the professional practice of nursing. One’s personal belief about nursing theory and practice is also explored as students continue their professional development. Prerequisite: Matriculated into the Accelerated BS/MS program.

NUR 325 Epidemiology in Nursing (2)
The concepts and methods of descriptive epidemiology are introduced and applied to health care delivery and professional nursing practice. Patterns of acute and chronic disease occurrences and progression are studied. The discovery of unusual disease patterns is also critically examined across culturally diverse communities. Methods to uncover epidemiological causes, frequency, and the distribution of disease; and the critical appraisal of the literature and screening programs are explored to promote a theoretical and empirical foundation for practice. The utilization of epidemiological information and evidenced-based data will be applied across populations to reduce risk, prevent disease, and optimize health among communities.

NUR 330A Nursing Research for Professional Nursing Practice (2)
Provides the basis for the examination of nursing research within culturally diverse populations for students in the accelerated BS/MS program. Focus is on the development of research skills as students develop a literature review of selected research topics and explore nursing research studies. Emphasis is placed on professional standards of practice and the safeguard of human subject rights within a context of care. The application of research findings to practice is discussed as it relates to the quality of care and the development of the nursing profession. Prerequisite: Matriculated into the Accelerated BS/MS program.

NUR 340A Nursing Leadership (1)
Designed for the accelerated RN to BS/MS program of study, students learn to evaluate and integrate communication, management, change, and leadership within the microsystems of the healthcare institution. This course focuses on developing the leadership and management function of the professional nurse through a synthesis of knowledge from previous nursing courses, and leadership and management theories. Through the leadership project, the student will further develop and refine skills necessary to coordinate, manage, and deliver nursing care.

NUR 344 Ethical Issues in Nursing (2)
Models of caring and traditional frameworks of ethical decision making are introduced as a guide to understand ethical decisions within diverse environments of health care systems, among providers and consumers, and within personal interactions. The synthesis of theoretical knowledge from nursing theories, the arts and sciences, and humanities are applied to ethical issues to develop knowledge, skill, and disposition essential for values-based behaviors and professional nursing practice. The ANA Code of Ethics for Nurses is examined to clarify the ideals and values of the nursing profession. Reflection of one’s values and ideals through the values clarification process is examined and discussed as it interacts within the nurse-patient relationship. Positions held by others within selected ethical issues and personal conflicting experiences are also critically examined.

NUR 377 Introduction to Clinical Nursing Education (2)
This introductory course will explore the functions of the clinical nurse educator. This course will provide a practical approach to clinical nursing instruction. Evidence-based clinical teaching methodologies will be explored, with emphasis on the process of educating a diverse nursing body.

NUR 381 Nursing Education and Instruction for Long Term Care (2)
Students will examine nurse educator competencies and apply principles of teaching and learning, adult learning theory, critical reflection, and active learning strategies to teach nurses and other health care personnel in clinical and classroom settings. A variety of informational sources such as lecture, discussions groups, and web enhanced instruction will be explored and related to personal experiences in service and academic learning environments. Research, literature, and case studies supporting these techniques with plans for assessment of learning outcomes will be explored throughout this course to enhance one’s teaching practice.

NUR 382 Reminiscent Therapy (2)
The origin, theoretical basis, and practice of reminiscence therapy will be studied during this course. Various approaches to reminiscence therapy will be discussed, applied and evaluated by the students throughout the semester as they read related literature and research. An integrative approach to assignments will facilitate the students’ ability to clarify concepts, look introspectively at their own memories and value reminiscence as a therapeutic nursing intervention.

NUR 383 Palliative Care (2)
In recognition of the universal need for humane end-of-life care, it is essential that nurses appreciate their unique opportunity and responsibility for insuring that individuals at the end of life experience a peaceful death. Recognition of the limits and inappropriate use of technological resources and apprehensions of the public about suffering and expenses associated with dying contribute to a renewed interest in humane end-of-life care. Precepts underlying palliative care principles are critically examined and include the assumptions that individuals live until the moment of death; that care is sensitive to diversity, and gives attention to the physical, psychological, and spiritual concern of the patient and the patient’s family. By stimulating scholarly discourse on this important reality, this course serves as a catalyst for integrating palliative care into traditional models of care delivery.

NUR 384 Evidence-based Practice in Nursing (2)
The exploration and application of evidence-based practice (EBP) is the emphasis of this course. Students will learn how to solve practice problems by formulating and EBP question and answer it using the best evidence available. An in-depth look at performing literature searches and utilizing practice guidelines will be presented. EBP implementation models will help students learn the best way to explore practice questions and present change. Students will have the opportunity to exercise these skills through a written assignment and examination of internet resources (e.g. Cochrane Library).

NUR 385 Transformational Leadership for Nurses (2)
The exploration and application of transformational leadership for Nurses is the emphasis of this course. Students explore leadership styles and an innovation model to investigate the significance and application of transformational leadership. Profiles of leaders and analysis of team approaches are explored within a variety of practice arenas. Critical reflection of the individual nurse’s role as a leader and the student’s personal leadership development will be explored as it relates to transforming others.

NUR 386 The Nurse Practice Act (2)
The course provides an overview of the nurse practice act from its’ past to the present. It will assist the professional nurse in designing the nurse practice act of the future. The practice act and the influences affecting nursing practice and the health care delivery system will be discussed.

NUR 387 History of Nursing (2)
Awareness of historical events in the discipline of nursing fosters socialization within the profession, facilitates comprehension of current nursing issues and prepares the nurse for future trends in the
discipline. Critical reflection of the historical roots in nursing enhances the development of professional nursing roles. Exploration of nursing history promotes critical thinking skills and allows for understanding of the impact of historical events on practice today.

NUR 388 Civility and Horizontal Violence (2)
Violence between and among nurses is a behavioral interaction found within all types of workplace environments. This course examines the nuances of horizontal violence among professionals within health care settings. Emphasis on civility and preventing horizontal violence explored through effective communication strategies, anger management, and standards of professional behavior.

NUR 390 Nursing Research (3)
Professional standards of practice, the moral obligation to safeguard human subjects, and the ethic of care are emphasized as professional nurses participate in research activities. Students learn to critically review qualitative and quantitative research designs and explore their relevance within culturally diverse populations. The integration of knowledge from nursing, the arts, and sciences provides a basis for the development of critical reflection, decision making, and clinical judgment. The application of these studies as it relates to the foundation of practice, research utilization, and evidence based nursing is examined. Pre/ Corequisites: NUR 313, Statistics.

NUR 444 Nursing Leadership (4)
As designer, coordinator, and manager within today's health care delivery system(s), the student examines and utilizes the professional nurse roles of leader, manager, collaborator, teacher, change agent, and advocate. Synthesis of knowledge from the arts and sciences and previous nursing courses, standards of practice and ethical codes, leadership and management theory, and research are emphasized in management and leadership skill development. Leadership approaches, principles of management, decision-making, communication and information management are utilized to evaluate the systems needed to care for groups of clients. Opportunities for collaboration with nurse mentors/leaders, and critical reflection of one's ongoing professional development and changing practice are provided in clinical experiences with practicing nurse leaders and in peer group discussions. Prequisites: Matriculated status, NUR 313, NUR 340, current New York Registered Professional Nurse license, current CPR certification, complete health clearance on file. Clinical clearance must be validated prior to first scheduled clinical agency experience. Attendance at clinical activity without prior clinical clearance will result in clinical failure. Pre/Corequisites: NUR 324, NUR 344.

NUR 455 Public Health Nursing Science I (4)
The basic concepts of community health and their interrelationship with people, nursing, and the environment are examined. Structure, function, and programs of the health care system are explored. Critical thinking and research are used to assess and analyze culturally diverse populations and community resources as they impact health of populations at risk. The professional role and standards of community health nurses, as they provide care in community based settings, are examined within a nursing and public health theoretical framework. Principles of teaching and learning, decision making, leadership, and management within the larger social system are analyzed for their impact on health care. Prerequisites: NUR 313, NUR 325. Pre/Corequisite: NUR 324, NUR 390.

NUR 474 Public Health Nursing Science II (4)
Building on nursing theory and clinical practice as essential to community health nursing, focus is on health teaching and health care opportunities that are available in a variety of culturally diverse community settings. Health promotion for individuals, families, and communities across the life span is emphasized. Family systems theory, development theory, and caring are applied to community health nursing. Incorporating a multifaceted approach, levels of prevention, communication skills, transcultural assessment, public health and home health standards of practice, and community health regulatory requirements are examined and applied. Opportunities for critical reflection, collaboration, professional growth, and lifelong learning are also integrated within clinical experiences. Community health experiences are provided through scheduled clinical days one day per week (M-F) based on agency availability. Students must provide their own transportation. Prerequisites: NUR 324, NUR 444, NUR 455, current New York State Registered Professional Nurse license, current CPR certification, complete health clearance on file. Clinical clearance must be validated prior to first scheduled clinical agency experience. Attendance at clinical activity without prior clinical clearance will result in clinical failure. Pre/Corequisite: Sociology elective.

NUR 490 Culminating Seminar (2)
The connections of nursing theory, research, and practice are the emphasis of this culminating experience. Opportunity for collaboration with peers and faculty is provided as students develop and participate in research and scholarly activities. Inquiry into scholarly works is explored to further enhance nursing knowledge, research utilization, and professional practice. Personal values and beliefs are reexamined as the student describes one's transformed view of self and practice as a maturing professional in nursing. Critical reflection of one's personal growth and commitment to ongoing professional development is examined within the context of achieving professional excellence. Pre/Corequisites: NUR 474; Student must be within 4 credits of graduation at completion of culminating seminar.

NUR 491 Independent Study (Variable 1-4)
This is an independent study of selected contemporary problems within the nursing discipline. The student is required to submit a written proposal which includes a description of the project, its duration, education goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

Philosophy

PHI 130 World Religions (4)
An examination of the origins, philosophies and development of the major religions of the world. Ways of knowing other than western, science-oriented ones will be explored, and a fundamental knowledge of religious answers to questions about ultimate meaning will be pursued. Religions to be studied include Hinduism, Buddhism, Judaism, Christianity, Islam, Confucianism, Jainism, Sikhism, Shinto, Taoism, and Zoroastrianism. Meets new General Education Other World Civilizations requirement.

PHI 350 Technology and Ethics (4)
Traditional ethical theory and the problems in applying theory to contemporary technological situations. Ethics in communication receives special emphasis. Meets new General Education Humanities requirement.

Physics

PHY 101 General Physics I (4)
Algebra-based introduction to mechanics, wave phenomena and thermodynamics. Topics include kinematics, dynamics of linear and circular motion, gravitation, conservation of energy and momentum, fluids oscillations, sound, thermal physics and the laws of thermodynamics. Includes three hours of lecture and three hours of laboratory per week. Recommended for all Telecommunications majors with appropriate placement scores. Prerequisite: MAT 111 or equivalent. Meets new General Education Natural Science requirement or the SUNYIT Laboratory Science requirement.

PHY 102 General Physics II (4)
Algebra-based introduction to electromagnetism, optics, and modern physics. Topics include electric forces and fields, electric potential, DC circuits, magnetic forces and fields, electromagnetic induction, AC circuits, electromagnetic waves, geometrical and physical optics and an introduction to modern physics. Includes three hours of lecture and three hours of laboratory per week. Recommended for all Telecommunications majors with appropriate placement scores. Prerequisite: PHY 101 or equivalent. Meets new General Education Natural Science requirement or the SUNYIT Laboratory Science requirement.
PHY 201  Calculus Based Physics I (4)
The first course in a three course calculus based physics sequence. Covers topics in mechanics including motion in one, two and three dimensions, Newton's laws of motion, work and kinetic energy, motion of rigid bodies, and simple harmonic motion. Also wave motion is briefly covered. Includes three hours of lecture and three hours of laboratory per week. This course and PHY 101 cannot both be taken for credit. Prerequisite: MAT 152 or equivalent. Meets new General Education Natural Science requirement or the SUNYIT Laboratory Science requirement.

PHY 202  Calculus Based Physics II (4)
The second course in a three course calculus based physics sequence. Covers topics on electricity and magnetism, and some topics on optics and electromagnetic waves. Includes three hours of lecture and three hours of laboratory per week. This course and PHY 102 cannot both be taken for credit. Prerequisite: PHY 201 or equivalent. Meets SUNYIT Laboratory Science requirement.

PHY 203  Calculus Based Physics III (4)
The third course in a three course calculus based physics sequence. Covers selected topics from thermodynamics (temperature and heat, thermal properties of matter and laws of thermodynamics) and waves (mechanical waves, wave interference and normal modes). Includes lecture and laboratory. Prerequisite: PHY 202 or equivalent.

PHY 290  Topics in Physics (1-4)
An introductory course in selected topics in Physics not currently covered in any of the listed classes. Topics are chosen to illustrate different fields and applications which are all part of Physics.

PHY 311  Modern Electronics (4)
Designed to give students who do not intend to become Electrical Engineers or Technologists a good background in the field of analog and digital electronics. Upon completion of this course, the student should have a practical understanding of test equipment and basic analog circuits such as power supplies, analog switches of operational amplifiers as well as a practical understanding of the operation and use of digital integrated circuits and their application to more complicated data acquisition systems used in modern chemical instrumentation. Three hours of lecture and three hours laboratory per week. May not be taken be electrical engineering, electrical technology or computer engineering technology students. Prerequisite: One year of high school physics or equivalent.

PHY 325  Geometrical Optics (4)
Covers the topic of classical optics with both lecture and laboratory. The nature of light, the laws of reflection and refraction, mirrors, lenses, image formation as well as aberrations will be covered using geometric techniques. The structure and operation of specific optical instruments will be explored in detail. Prerequisite: PHY 202 or equivalent.

PHY 326  Physical Optics (4)
Introduces the student via lecture and laboratory to the wave properties of light as observed in such phenomena as interference, diffraction and polarization. Topics also include a review of harmonic wave motion, the principle of superposition of waves, Fraunhofer and Fresnel diffraction, interferometry, coherence, diffraction gratings, multiple reflection interference and optical boundaries. Prerequisite: PHY 325 or equivalent.

PHY 351  Modern Physics (4)
Provides a broad overview of the major developments and breakthroughs in physics since the beginning of the 20th century, including Einstein's special theory of relativity, quantum nature of light, wave nature of particles, introduction to quantum mechanics, atomic structure, molecular and condensed matter physics, nuclear physics, particle physics and cosmology. Includes three hours of lecture and three hours of laboratory per week. Prerequisites: Calculus Based Physics II (PHY 202) and Differential Equations (MAT 230) or equivalents.

PHY 361  Intermediate Mechanics (4)
Newtonian theory is used to describe the mechanical behavior of objects. Topics include: Newton's laws of motion, momentum and energy, motion of a particle in one or more dimensions, motion of a system of particles, rigid body motion, introduction to Lagrange and Hamilton's equations. Prerequisites: MAT 230, MAT 253, and PHY 201 or equivalents.

PHY 371  Electromagnetism (4)
The laws of electricity and magnetism are developed using the language of vector calculus. Topics include: Coulomb's Law, the electrostatic field and potential, Gauss' Law, dielectrics, capacitors, electric current, the steady magnetic field, Biot-Savart Law, Ampere's Law, magnetic materials, Faraday's Law, the displacement current, Maxwell's Equations, and plane electromagnetic waves. Prerequisites: MAT 230, MAT 253, and PHY 202 or equivalents.

PHY 380  Laser Principles and Systems (4)
Through lectures and laboratory experiences, the properties of laser radiation, general operational principles, the modification of laser outputs and specific laser systems and their applications are introduced. Three hours of lecture and two hours of laboratory per week. Prerequisites: Optics course and Calculus II.

PHY 381  Introductory Quantum Mechanics (4)
An introduction to the theory and applications of Quantum Mechanics. Topics will include: wave-particle duality, Heisenberg uncertainty principle, quantum states and operators, Schroedinger equation and quantum statistics. Applications will be selected from atomic and solid state physics, including semiconductors and lasers. Prerequisites: MAT 230, MAT 253, and PHY 202 or equivalents.

PHY 472  Electromagnetic Waves and Radiation (4)
Within an advanced mathematical framework that involves vector and tensor algebra, differential equations, and special techniques of electromagnetism, this course studies the solutions of the Maxwell's equations (a system of coupled partial depth analytical study of electromagnetic waves, their structure, propagation, reflection, transmission, interaction with matter and the mechanisms for their generation by antennas. Prerequisite is Electromagnetism (PHY 371) or equivalent.

PHY 490  Special Topics in Physics (4)
A detailed examination of a topic in physics not treated extensively in other physics courses. Prerequisite: Permission of instructor.

PHY 491  Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisite: Matriculated students only, permission of instructor and dean of subject area.

Political Science

POS 110  American Public Policy (4)
An introduction to the major features of the policy making process in the United States. Emphasis on the structures and institutions of the American political system and the role of citizens in political process. Examination of democratic theory and political philosophy in the American context. Meets new General Education Social Science requirement.

POS 262  Online Politics (4)
The emergence of the Internet, and especially the Web, as a significant factor in American and global life has challenged traditional views of communication and politics. In this course, we use some core concepts of political communication, information design and technology, and deliberative democracy to examine the role of information technologies in candidate and issue campaigning, online voting, protest and advocacy movements, law-making and electronic governance. Students will be required to engage as participant-observers of a Web-based political activity using a methodological approach appropriate to their analysis. Cross listed with COM 262. Meets the General Education Social Sciences requirement.
POS 252  The Politics of Life and Death (4)
Examines the nature of political debate and policy-making in the United States on issues related to human life. Four issues will be examined: assisted reproduction, human cloning, abortion, and assisted suicide. For each of the issues, we will review the scientific and philosophical context, assess the actions of the legislative, judicial, executive and administrative branches of the national and state governments, and explore the nature of public discourse. This course assumes an interest in and understanding of American politics and political institutions. Though not a prerequisite, completion of an introductory course in American politics is recommended prior to enrollment. Meets new General Education Social Science requirement.

POS 321  State and Local Government (4)
A structural examination of the organization and responsibilities of state and local governments, with particular emphasis on the state of New York. This course includes a discussion of current problems facing urban governments, and their solution in the context of multiple levels of government. Meets new General Education Social Science requirement.

POS 330  World Politics (4)
A survey of major political developments in the post-WWII period. Through the use of several case studies, the student will examine political structures and processes in both the western and non-western world. Meets new General Education Social Science requirement.

POS 339  Public Opinion in Contemporary Society (2)
An analysis of public opinion as a phenomenon that is simultaneously political, psychological and sociological. Draws on resources and knowledge from several fields, including political science, psychology, sociology and market research. Examines the formation, measurement and marketing of public opinion in contemporary society.

POS 340  Elections and Political Behavior (4)
An exploration into the roots and consequences of political behavior with a focus on the “average” citizen. Topics include the formation and importance of political values, the dimensions of political participation, and the implications of empirical evidence for electoral strategy and contemporary democratic theory. Meets new General Education Social Science requirement.

POS 341  American Politics and Communication Technology (4)
An examination of the interplay between patterns of development in American public policy, political institutions, and communications technology. Close study of the role of the FCC, Congress and the Courts in regulating and controlling communication technologies. Emphasis on newly emerging media delivered via computer networks. Analyzes the place of communications technology in democratic theory. Meets new General Education Social Science requirement.

POS 342  Constitutional Law (4)
An examination of the Constitution of the United States and its interpretation by the judiciary, with an emphasis on the activities of the Supreme Court. Analysis of issues concerning the separation of powers, federal-state relationships, economic regulation, and political and civil rights. Meets new General Education Social Science requirement.

POS 400  Topics in Political Science (4)
An in-depth examination of a current topic in political science. Examples might include political psychology, media and politics, political ethics, and presidential elections. May be taken more than once as topics change.

POS 491  Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisites: Matriculated students only, permission of instructor and dean of subject area.

POS 492  Political Science Internship (Variable 1-4)
Internship is designed to provide practical work in a position related to political science or public policy, and to compare and contrast real-world experience with scholarly assessment of political actors or behavior. Students either work on or off campus. Minimum of 45 hours of contact time per credit required. Prerequisite: Permission of faculty member; approval of internship agreement. Only S/U grades are awarded for this course.

Psychology

PSY 100  Principles of Psychology (4)
Surveys the field of psychology, emphasizing issues of current importance. Topics covered include research methodology and the influence of biological, social, and environmental factors on behavior. No credit will be given to students who have previously taken an introductory psychology course. Meets new General Education Social Science requirement.

PSY 216  Child and Adolescent Development (4)
Provides a general introduction to the study of psychological development from conception through adolescence. The emphasis is primarily on normal development. We will consider development in contexts such as home and school, and examine specific issues such as daycare, infant attachment, cognitive development, sibling relations, and adolescent identity. When discussing these issues we will focus on integrating theory and research with real world problems and your own knowledge and experience. Prerequisite: PSY 100 or equivalent.

PSY 218  Adult Development and Aging (4)
Provides you with a general introduction to the study of psychological development from early adulthood through death. The emphasis is primarily on normal development, although aspects of abnormal development will be discussed when appropriate. We will consider development in contexts such as home, work, school, and long-term care facilities, and examine specific issues such as identity formation, mid-life crisis, sandwich generation, and cognitive decline. When discussing these issues we will focus on integrating theory and research with real world problems and your own knowledge and experience.

PSY 220  Life-span Developmental Psychology (4)
Examines the physical, cognitive, social, and emotional development of individuals from conception to death. Special attention is given to the environmental and biological factors that contribute to normal development in childhood, adolescence, adulthood and aging. Prerequisite: PSY 100 or equivalent.

PSY 222  Abnormal Psychology (4)
Examines the dimensions, theories, and empirical findings in human psychopathology. Topics covered will include: concepts of abnormality, theories, classification, etiology, assessment, and treatment of the major psychopathologies. Prerequisite: PSY 100 or equivalent.

PSY 242  Social Psychology (4)
Examines principles of social behavior in a variety of settings. Topics include: attitude formation and change, group dynamics, interpersonal attraction, social perception, altruism, and aggression. Prerequisite: PSY 100 or equivalent.

PSY 262  Learning and Motivation (4)
Examines historical and modern concepts of learning and motivation, Pavlovian and operant conditioning, and their application. The relationship of learning to motivation and physiological, cognitive, and social theories of motivation will also be discussed. Prerequisite: PSY 100 or equivalent.

PSY 273  Dying, Death & Bereavement (4)
Examines psycho-social conceptualizations of dying, death and grief in contemporary society with special emphasis on one's own feelings and attitudes towards death and coping and supportive strategies of the dying and bereaved persons. Socio-cultural, legal/ethical issues are also explored. Prerequisite: PSY 100 or equivalent or permission of instructor.
PSY 304 Sports Psychology (4)
Deals with the applications of psychology in sport: personality analysis of athletes, skill acquisition, equipment design, gender differences, role of the coach, aggression and stress management.

PSY 310 Research Methods in Psychology (4)
This lecture and laboratory course will provide experience in the use of a variety of research designs and methods of data analysis. Students design research projects in small groups by selecting an appropriate sampling procedure and devising a method of collecting and analyzing data. Prerequisites: STA 100 or equivalent and PSY 305 or permission of instructor.

PSY 325 Psychology of Gender (4)
Reviews the major findings and theories related to sex roles and sex typing. It will also examine gender specific issues (e.g. motherhood/fatherhood). Prerequisite: PSY 100 or equivalent.

PSY 331 Psychology of Personality (4)
A study of the determinants of personality and methods of studying personality, including various systems of psychology and their interpretations of personality structure and development. Prerequisite: PSY 100 or equivalent.

PSY 352 Industrial and Organizational Psychology (4)
Examines the behavior of people in industrial work environments. Topics include attitudes toward work, organizational climate, appraising employee performance and interest, engineering psychology, worker efficiency, accident behavior, leadership styles, and effectiveness. Prerequisite: PSY 100 or equivalent.

PSY 360 Perception (4)
A presentation of the basic facts and theories of human perception, concentrating primarily on vision. Topics to be covered include psychophysics, form and space perception, the constancies, the effects of learning, motivation, and set on perception, selective attention, and perceptual development. Prerequisite: PSY 100 or equivalent.

PSY 365 Educational Psychology (4)
Provides an overview of the psychological theory and research in relation to educational practices. Cognitive, motivational, interpersonal and socio-cultural influences on learning and retention in educational institutions will be examined. Characteristics and developmental needs of the learner throughout lifespan, along with evaluative measures of learning/instructions will be considered. Prerequisite: PSY 100.

PSY 377 Health Psychology (4)
Health and illness is experienced within a broad psychosocial context. Physical states affect mental states and mental and emotional experiences have the capacity to influence the course of physical health and illness. Investigates the relationship that exists between physical and mental health. Emphasizes the role that psychological, cultural and social factors have for both physical health and illness, and also examines stress and stress management techniques. Prerequisite: PSY 100.

PSY 385 Evaluation Research (4)
Application of various research methods to the planning, monitoring, and evaluation of social intervention programs. Topics include research design, questionnaire construction, survey methods, computer applications, and the critical analysis of evaluation studies. Assignments in class and field settings will provide students with practical experience in the design of evaluation studies, data collection and analysis, and the writing of evaluation reports. Prerequisite: PSY 310 or SOC 332 or equivalent.

PSY 390 Engineering Psychology and Human Performance (4)
Deals with the systematic application of relevant information about human capabilities and limitations to design of things and procedures people use. Topics include: information displays, acquisition of skills, person-machine system properties, work space, applied anthropometry, accidents, and psychological factors in transportation. Prerequisite: PSY 100 or equivalent.

PSY 405 History and Systems of Psychology (4)
Examines theoretical systems of psychology in historical perspective. Classical and contemporary theories of human behavior will be analyzed in terms of their impact on various fields of psychology. Prerequisite: PSY 100 or equivalent. Restricted to Psychology majors only.

PSY 415 Psychology of Aggression and Nonviolence (4)
Deals with the factors associated with aggression and nonaggression. Topics include theories of aggression, control of aggression, personality patterns of violent and nonviolent individuals, psychology of power, conflict resolution, and techniques for teaching nonviolent behavior. Prerequisites: PSY 305 or PSY 315 or PSY 331 or PSY 242 or permission of instructor.

PSY 425 Cognitive Psychology (4)
A survey of memory, thinking, language, and problem solving. The course will follow the history of psychological theory on cognition from associationism to gestalt approaches to modern information processing approaches and artificial intelligence. Particular attention will be paid to practical and clinical applications of research. Prerequisite: PSY 262 or PSY 360 or permission of instructor.

PSY 444 Applied Social Psychology (4)
Intended to expose students to interventions by social psychologists in real-world problem solving. Topics include applied nature of social psychology; social psychology of education, religion and politics; cross-cultural psychology; social psychology and legal issues; consumer behavior; social psychology and social policy; and conservation and environmental concerns. Prerequisites: PSY 305 or PSY 331 or PSY 242 or PSY 352 or equivalent or permission of instructor.

PSY 445 Group Dynamics and Interpersonal Communication (4)
Examines interaction in small groups. Topics include group structure and development, and aspects of group process such as problem-solving, decision-making, productivity, creativity, power, conflict resolution, leadership, and communication. Skill in application of concepts of group dynamics is developed through exercises in experiential learning and observation. Prerequisite: PSY 242 or PSY 352 or equivalent.

PSY 460 Neuropsychology (4)
The mind arises from the brain and every topic in psychology has a biological basis. This course is a survey of the biological bases of a wide array of topics, including perception, motivation, emotion, bodily movement, learning, memory and language. Prerequisite: PSY 100 or equivalent.

PSY 470 Psychological Testing (4)
Examines the basic concepts of measurement theory and their application to developing, administering, and interpreting psychological tests. Moral, ethical, and legal issues associated with testing and the use of test results are considered. Prerequisites: PSY 222 or PSY 331 or PSY 352 or equivalent.

PSY 477 Principles of Psychological Counseling (4)
Examines the theories and techniques used in counseling situations. Special attention will be given to interviewing skills, ethical issues, and the interpersonal dynamics that comprise the major therapeutic approaches. Prerequisites: PSY 222 or PSY 331 or PSY 352 or equivalent.

PSY 490 Selected Topics in Psychology (4)
An in depth treatment of a selected topic in Psychology. Provides students with the opportunity to investigate psychological subject matter. Students may receive credit in a future semester for different topic areas. Prerequisite: PSY 100 or an introductory psychology course.

PSY 491 Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, method of evaluation, and number of credits to be earned. Prerequisite: Matriculated students only, permission of instructor and dean of subject area.
PSY 492 Practicum in Psychology (4)
Supervised, discipline-related experience in a community service agency is provided. The major emphasis is to help the student applying theoretical knowledge to real life situations, and to develop skills and competence as a professional. Regular meetings with agency supervisor and practicum coordinator are an essential feature of the practicum. Minimum GPA 3.0 and permission of the psychology department are required for admission. Prerequisites: PSY 305, PSY 310, and PSY 385 or equivalent. This course will not be a substitute for one of the three advanced courses required to complete the credits to major in the Psychology program.

PSY 493 Senior Seminar in Psychology (4)
Special topics of current interest and relevance are treated in-depth. Emphasis is placed on the critical analysis of current research literature and development of independent projects by seminar members. Topics vary from semester to semester. Prerequisites: Senior standing, PSY 310 and PSY 385 or equivalent and permission of instructor.

Recreation
See Health and Physical Activity

Science, Technology, and Society

STS 350 Science and Technology Transfer and Assessment (4)
Focuses on two aspects of modern science and technology: 1) an introduction to and critical analysis of technology assessment; i.e., the determination of potential impacts of technology on people and the environment; and 2) an analysis of the basic mechanisms and major obstacles related to the communication and transfer of science and technology to different groups of users, including the general public, and the public's response to science and technology.

STS 490 Topics in Science, Technology and Society (Variable 1-4)
An in-depth examination of particular topics in science, technology and society. Topics may include: Science, Technology, and Identity; Science, Technology, and the Environment; Science, Technology, and Gender; Science, Technology and Religion; Science, Technology, and Science Fiction. Typically, a topics course will use two or three general textbooks, and every student will be required to perform research on a particular issue related to the topic. May be taken more than once as topics change.

STS 491 Independent Study (Variable 1-4)
Extensive study and research on a particular topic of student interest under the supervision of a faculty member. The student is required to submit a written proposal which includes a description of the project, its duration, educational goals, methods of evaluation, and the number of credits to be earned. Prerequisites: STS 300 and permission of instructor and dean of subject matter.

Sociology

SOC 100 Introduction to Sociology (4)
Introduces the sociological perspective in understanding the everyday lives of members of a society. Emphasizes the influence of socialization, culture, inequality, institutionalization, conflict and collective behavior. Focuses primarily on the United States. Meets new General Education Social Science requirement. Senior Sociology majors may not register for this course.

SOC 110 Social Problems (4)
Examines social problems in industrial society, and how social institutions can lead to their creation, perpetuation, and solution. Focuses on particular social issues, such as poverty, power, race, ethnicity, gender roles, work, health, education, and war. Explores similarities and differences between sociological and other social science approaches to the study of social problems. Emphasis placed on the United States. Meets new General Education Social Science requirement.

SOC 210 Sociology of the Family (4)
Analyzes the nature of gender roles in the family, a basic social institution. Examines various patterns of family organization and problems confronting the family. Emphasizes the family in the United States. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.

SOC 220 Sociology of Gender (4)
Explores contemporary theories, understandings and performances of gender, with attention to the intersections of race, class, gender and sexuality. Also examines the relationships of gender to life opportunities and experiences, social structures and societal reproduction. Prerequisites: SOC 100 or SOC 110 or CJ 101.

SOC 230 Sociology of Racial and Ethnic Relations (4)
Explores the complex and dynamic nature of race and ethnicity in American society, with a combined focus on historic and ethnographic approaches. Topics covered include the patterns of racial and ethnic inequality, the evolving social construction of race and ethnicity, the changing perceptions of and explanations for race relations, the intersection of race and ethnicity with other forces (such as social class and gender), and the social pressure for and against assimilation and acculturation. Prerequisite: SOC 100 or SOC 110 or CJ 101.

SOC 290 Special Topics in Sociology (1-4)
Treatment of a special topic in Sociology. Provides student with the opportunity to investigate sociological subject matter. Students may receive credit in future semester for different topic area.

SOC 310 The History of Sociological Theory (4)
Presents a historical overview of the emergence and development of sociological theory, with emphasis on theorists such as Comte, Spencer, Marx, Durkheim, Weber, Mead, and post-WWII theorists. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.

SOC 314 Sociology of Deviance (4)
Presents major sociological theories of deviance. Examines specific forms of deviance, such as drug abuse, crime, sexual deviance, and mental illness. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.

SOC 332 Methods of Inquiry (4)
Provides experience in the design and implementation of social science research. Topics covered include philosophies of social science, development of theories and hypotheses, modes of observation, methods of sampling and techniques of analysis. Students will design and implement several research projects during the semester. Use of computers is required, though no prior experience is assumed.

SOC 350 Chemical Dependencies and Human Behavior (4)
Explores sociological perspectives on the acquisition, continuation, and elimination of human dependency on chemical substances like drugs and alcohol. Aims to bridge the gap between professional and academic skills and information. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.

SOC 351 Sociology of Crime (4)
Introduces the study of crime and the criminal justice system. Examines the causes of crime, including violent crime, crimes against property, substance abuse, sexual offenses, white collar, and organized crime. Considers the efforts of the police, courts, penal system, and community to deal with the various types of crime, as well as the social policy implications of our understanding of and approaches to the problem of crime. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SOC 300</td>
<td>The Sociology of Work (4)</td>
<td>Describes contemporary sociological analyses of work, especially industrial labor processes. Explores the relative impact of technological and social factors on the organization of a variety of specific labor processes. Develops and synthesizes skills of work description. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.</td>
</tr>
<tr>
<td>SOC 370</td>
<td>Sociology of Health and Illness (4)</td>
<td>Integrates varied sociological perspectives with the study of health and illness. Investigates the relationship between social structure and the experience of health or illness. Examines the organization and delivery of medical services in the United States. Focuses on the individual's experience of illness. Links sociological theory and sociological practice in the healthcare arena. Prerequisites: ANT 301 or SOC 110 or an introductory anthropology or sociology course.</td>
</tr>
<tr>
<td>SOC 381</td>
<td>Social Gerontology (4)</td>
<td>Compares sociological, biological, and psychological analyses of aging. Analyzes the problems confronting older people in industrial societies. Prerequisite: ANT 301 or SOC 110 or an introductory anthropology or sociology course.</td>
</tr>
<tr>
<td>SOC 410</td>
<td>Power and Violence in the Family (4)</td>
<td>Issues of power and control are part of every relationship and can lead to emotional, physical, and sexual violence. Through lectures and class discussion the student will gain an understanding of the fundamental dynamics of abusive situations, the consequences for all concerned, and the policy implications. (Designed specifically to meet the needs of students interested in the human services field.)</td>
</tr>
<tr>
<td>SOC 411</td>
<td>Sociology of Community (4)</td>
<td>Examines the tradition of Community Studies in American Social Science. Presents various models of community process. Examines particular social problems manifest in communities such as community development, ethnicity, and poverty. Encourages a research orientation in socially-relevant professions. Prerequisite: ANT 321.</td>
</tr>
<tr>
<td>SOC 424</td>
<td>Social Welfare Policy (4)</td>
<td>Investigates the history, concepts, programs, and practices of social welfare policies in the United States. Promotes an appreciation for the interrelatedness of practice and policy analysis in the field of social welfare scholarship. Prerequisite: ANT 321.</td>
</tr>
<tr>
<td>SOC 446</td>
<td>The Individual and Society (4)</td>
<td>Presents various ways to conceptualize the mutual influences of individual-level and social-structural processes. Addresses specific topics within social psychology, “human nature,” communication and language, perception, socialization, and the acquisition of roles, ideologies, and values. Prerequisite: ANT 321.</td>
</tr>
<tr>
<td>SOC 450</td>
<td>Sociology of Corrections (4)</td>
<td>Introduces students to correctional institutions by examining the history and philosophy of corrections; the social organization of prison societies as total institutions; the management of prisons; prison violence and court-mandated attempts to restore civility; jails and community corrections; and critiques of traditional approaches to corrections.</td>
</tr>
<tr>
<td>SOC 452</td>
<td>White Collar Crime (4)</td>
<td>Focuses upon crime that occurs within organizational and occupational contexts. Applies the major theories of crime causation to such illegality whether committed for the benefit of an employing organization, by individuals through the exercise of state authority, by individuals in their particular professional capacity, or for other types of individual gain. Explores legal and social strategies for controlling these practices.</td>
</tr>
<tr>
<td>SOC 453</td>
<td>Comparative Criminal Justice Systems (4)</td>
<td>Compares the American Criminal Justice System to Criminal Justice Systems of a number of other advanced industrial societies, especially in Western Europe. Focal areas include overall policy/philosophy and social organization. Special emphasis upon the alternatives to American approaches, referred to broadly as harm reduction, including decriminalization, diversion before entering the CJS, diversion after entering the CJS, effective rehabilitation, and successful re-entry. Prerequisites: CJ 101 or SOC 110 and one 200 or 300 level CJ or SOC course.</td>
</tr>
<tr>
<td>SOC 455</td>
<td>Sociology of Law and the Courts (4)</td>
<td>Examines the social origins of law and the institutions by which it is administered; the effect of law on the reproduction of social arrangements; the history of legal ideas and their influence on legislation and court precedents; and the relation of law to the problem of social order and control. Primary emphasis is on criminal law and courts. Prerequisites: ANT 320</td>
</tr>
<tr>
<td>SOC 465</td>
<td>Sociology of Occupations and Professions (4)</td>
<td>Presents previous and current sociological approaches to the structure of labor markets, both occupational and professional. Analyzes changes in these markets. Examines the relations between labor markets and other social institutions, such as the family, the school, race/ethnicity, gender, and class. Analyzes professions as particular types of occupation, the social consequences of professionalization, and the implications of current patterns of labor market recruitment, mobility, segregation, and segmentation. Prerequisite: ANT 301 or SOC 110, or an introductory anthropology or sociology course.</td>
</tr>
<tr>
<td>SOC 490</td>
<td>Selected Topics in Sociology (4)</td>
<td>An indepth treatment of a selected topic in Sociology. Provides students with the opportunity to investigate sociological subject matter. Students may receive credit in a future semester for different topic areas.</td>
</tr>
<tr>
<td>SOC 491</td>
<td>Independent Study (Variable 1-4)</td>
<td>Provides a structure for extensive study and/or directed research (under faculty supervision) on a topic. Application form must include a description of the project, its duration, its educational goals, method for its evaluation, and a suggested number of credits. Prerequisites: Matriculated students only; permission of instructor and school dean required.</td>
</tr>
<tr>
<td>SOC 492</td>
<td>Internship in Sociology (2-6)</td>
<td>Intended for majors to gain practical and/or professional experience in an appropriate social service, criminal justice, or work-related community setting. Student will work with a qualified specialist in the relevant area, and will be responsible for reporting to both the specialist and to a faculty supervisor. Students wishing to enroll must have completed a minimum of 12 credits total in their majors.</td>
</tr>
<tr>
<td>SOC 493</td>
<td>Senior Seminar in Sociology (4)</td>
<td>Explores in depth a particular sociological topic chosen by the instructor. Emphasizes critical analysis of current sociological literature and the development of independent projects by students. Topic varies. Prerequisite: SOC 310 and SOC 332. Permission of instructor required.</td>
</tr>
<tr>
<td>SOC 495</td>
<td>Practicum in Sociology (4)</td>
<td>Integrates academic and practical experience during one semester placement in an appropriate social service, criminal justice, or work-related community setting. Student will work with a qualified specialist in the relevant area, and will be responsible for reporting to both the specialist and to a faculty supervisor. Students must apply for admission to the course. Prerequisites: Completion of at least 2 Sociology/Anthropology courses at this campus prior to the start of this class and a 3.0 GPA and permission of instructor.</td>
</tr>
<tr>
<td>Spanish</td>
<td>SPA 101  Elementary Spanish (4)</td>
<td>Designed to give the beginning student an awareness of how members of another culture communicate and live. Student achieves this by using language skill of listening, speaking, reading, and writing. The process entails study of pronunciation, basic grammar, selected vocabulary, and the culture that the language represents. Meets the new General Education Foreign Language requirement.</td>
</tr>
<tr>
<td>Spanish</td>
<td>SPA 102  Intermediate Spanish (4)</td>
<td>Refines the skills learned in an introductory Spanish class in oral comprehension, speaking, reading, and writing. The course instruction will be primarily in Spanish. Meets the new General Education Foreign Language requirement. Prerequisite: SPA 101.</td>
</tr>
</tbody>
</table>
Statistics

STA 100  Statistical Methods (4)
Study of the methods whereby data are collected, analyzed, and presented. Topics include: frequency distributions, measures of location, dispersion, and skewness; probability and probability distributions; and various topics in statistical inference. Meets the new General Education Mathematics requirement.

STA 225  Applied Statistical Analysis (4)
This course deals in-depth with statistical methods used to analyze data. Applications are drawn from many diverse areas. Topics include: measures of location and scale for frequency distributions, addition and multiplication laws for probability, binomial, Poisson, and normal distributions, inferences about proportions and location parameters in one-sample and two-sample problems, analysis of completely randomized and randomized blocks designs, simple linear regression and correlation, sign test, median test, rank sum test, and signed rank test. Prerequisites: Calculus II (MAT 152) or Calculus II for Engineering Technologies (MAT 122). Cross listed with MAT 225.

STA 290  Topics in Statistics (1-4)
An introductory course in selected topics in Statistics not currently covered in any of the listed classes. Topics are chosen to illustrate different fields and applications which are all part of Statistics.

Theater

THR 120  Studio Art: Visual and/or Performing (2)
An introduction and hands-on experience with the style and techniques of a visiting artist. Suitable lecture/demonstration of background and personal approach to the work will be shared by the artist. Students in a studio/workshop type of environment will participate in sequential exercises designed to allow them adopt and adapt some of those stylistic elements and/or features in their own work (visual and/or performing). Meets new General Education Arts requirement.

THR 300  Theater Production (4)
A balance between academics and studio work. Students will learn about theatre history and production as well as actively participate in the mounting of a theatrical work. Using the varied talents of the class, we will select polished scenes, a one act play, a full length play, or an interactive educational play about current issues. The production may be a public performance or merely in-class final design and performance presentations. If a public performance, members of the class will provide the artistic and technical staffing of the production, under the overall guidance of the class instructor. Additional assistance may be provided by student volunteers not enrolled for credit. Because theatre is an art which draws upon many areas of skill and intelligence, some reflective work will be done to document each student's personal journey. There will be some class visits to areas theaters and/or productions as these opportunities become available. Meets new General Education Arts requirement.

Faculty

Business Management Department

John W. Barnes  
*Associate Professor, Marketing*  
A.A. Mesa Community College  
B.A. Arizona State University  
M.B.A. Arizona State University  
Ph.D. Arizona State University

Lisa Berardino  
*Associate Professor, Human Resource Management*  
B.S. University of Southwestern Louisiana  
M.B.A. Loyola University  
Ph.D. Virginia Polytechnic Institute

Maureen Casile  
*Assistant Professor, Management*  
B.S. The University of Flordia  
M.B.A. The Wharton School, University of Pennsylvania  
Ph.D. The University of Texas at Austin
Laura Francis-Gladney  
*Associate Professor, Accounting*  
B.A. Queens College  
M.B.A. St. John's University  
Ph.D. Southern Illinois University

J. Allen Hall  
*Associate Professor, Management*  
B.A. University of Texas at Austin  
M.B.A. University of Texas at Austin  
Ph.D. University of Iowa

Peter Karl III  
*Professor, Accounting/Business Law*  
B.S. University of Notre Dame  
M.B.A. Rensselaer Polytechnic Institute  
J.D. Albany Law School  
C.P.A. State of New York

William L. Langdon  
*Professor, Finance*  
B.S. Utica College of Syracuse University  
M.B.A. Syracuse University  
Ph.D. Syracuse University

Hoseoup Lee  
*Associate Professor, Accounting*  
B.B.A, Chung-Ang University  
M.B.A. Hofstra University  
M.A. University Iowa  
Ph.D. University of Connecticut

Robert T. Orilio  
*Associate Professor, Finance*  
B.S. State University College at Geneseo  
M.B.A. Rochester Institute of Technology  
*State University Chancellor's Award for Excellence in Teaching, 1997*

Naren Peddibhotla  
*Assistant Professor, Management Information Systems*  
B.S. IIT Bombay  
M.B.A. IIM Calcutta  
Ph.D. University of Minnesota

Rafael Romero  
*Associate Professor, Finance*  
B.S. University of Costa Rica  
M.A. West Virginia University  
M.S. West Virginia University  
Ph.D. West Virginia University

Kenneth Wallis  
*Associate Professor, Accounting*  
B.A. Walsh College  
M.S. University of Akron  
C.P.A. States of New York and Ohio  
C.M.A. National Association of Accountants

Robert Yeh  
*Associate Professor, Management*  
B.S. National Cheng Kung University  
M.B.A. Syracuse University  
Ph.D. Purdue University

Communication and Humanities

Kristina A. Boylan  
*Associate Professor, History*  
B.A. Appalachian State University  
M.St. University of Oxford  
D. Phil. University of Oxford

Patricia A. Dorazio  
*Instructor, Communication and Humanities*  
B.A. Syracuse University  
M.A. State University of New York at Potsdam  
M.S. Rensselaer Polytechnic Institute

Maarten Heyboer  
*Associate Professor, History*  
B.A. Weber State University  
M.S. Virginia Polytechnic Institute  
Ph.D. Virginia Polytechnic Institute  
*State University Chancellor’s Award for Excellence in Teaching, 1999*

Walter E. Johnston  
*Associate Professor, Communication and Humanities*  
B.A. Williams College  
Ph.D. Cornell University

Russell Kahn  
*Associate Professor, Communication and Information Design*  
A.A.S. University of New Mexico

B.A. Idaho State University  
M.A. Idaho State University  
Ph.D. Idaho State University

Mary Perrone  
*Associate Professor, Communication and Humanities*  
B.A. Nazareth College  
M.A. Middlebury College  
Ph.D. State University of New York at Albany  
*State University Chancellor’s Award for Excellence in Teaching, 2008*
Steven Schneider  
Professor, Political Science/Information Design & Technology  
B.A. George Washington University  
M.A. University of Pennsylvania  
Ph.D. Massachusetts Institute of Technology  
State University Chancellor’s Award for Excellence in Scholarship & Creative Activities, 2006  

Ibrahim Yucel  
Assistant Professor, Communication, Information Design and Technology  
B.S. Pennsylvania State University  
Ph.D. Pennsylvania State University  

Ronald Sarner  
Distinguished Service Professor, Computer Science  
B.A. State University of New York at Stony Brook  
M.A. State University of New York at Binghamton  
Ph.D. State University of New York at Binghamton  
State University Chancellor’s Award for Excellence in Teaching, 1992  

Computer Information Sciences  

Bruno Andriamanalimanana  
Associate Professor, Computer Science  
M.S. Lehigh University  
Ph.D. Lehigh University  

Saumendra Sengupta  
Professor, Computer Science  
B.S. University of Calcutta  
M.S. University of London  
Ph.D. University of Waterloo  

Scott Spetka  
Professor, Computer Science  
A.A.S. Onondaga Community College  
B.S. Denison University  
M.S. University of California, Los Angeles  
Ph.D. University of California, Los Angeles  

Geethapriya Thamilarasu  
Assistant Professor, Computer Science  
B.E. Birla Institute of Technology & Science (Pilani, India)  
M.S. State University of New York at Buffalo  
Ph.D. State University of New York at Buffalo  

John A. Marsh  
Associate Professor, Telecommunications  
B.S. Ohio University  
M.S. Ohio University  
M.S. Carnegie Mellon University  
Ph.D. Carnegie Mellon University  

Christopher W. Urban  
Lecturer, Computer Science  
B.A. Villanova University  
M.S. Naval Postgraduate School  
M.A. Naval War College  

Rosemary Mullick  
Professor, Computer Science  
B.A. College of Idaho  
B.S. State University of New York Institute of Technology at Utica/Rome  
M.S. San Diego State University  
M.S. Syracuse University  
Ph.D. Wayne State University  

Xiaojiang Wu  
Assistant Professor, Computer Science  
M.S.E. in E.E. University of Tulsa  
Ph.D. Oklahoma State University  

Jorge Novillo  
Professor, Computer Science  
B.S. State University of New York at Buffalo  
M.A. State University of New York at Buffalo  
Ph.D. Lehigh University  

Engineering, Science and Mathematics  

Daniel Benincasa  
Associate Professor, Electrical Engineering  
A.S. Mohawk Valley Community College  
B.S. M.S. Clarkson University  
Ph.D. Rensselaer Polytechnic Institute  

Mark Bremer  
Lecturer, Biology  
B.A. The Colorado College  
M.S. Syracuse University  

Michael A. Pittarelli  
Professor, Computer Science  
B.A. State University of New York at Binghamton  
M.A. University of Chicago  
M.S. State University of New York at Binghamton  
Ph.D. State University of New York at Binghamton  
Ernest W. Goodell Research & Creativity Award, 1992  

Timothy Busch  
Assistant Professor, Electrical and Computer Engineering  
B.S. State University of New York at Buffalo  
M.S. Syracuse University  
Ph.D. State University of New York at Binghamton
Megan Dischavio  
Lecturer, Anatomy and Physiology  
B.A. Penn State University  
D.C. New York Chiropractic College  

Andrea Dziubek  
Assistant Professor, Math  
M.S. Berlin University of Technology  
Ph.D. Berlin University of Technology  

Amir Fariborz  
Professor, Physics  
B.Sc. Shiraz University  
M.Sc. Shiraz University  
B.Phil. Shiraz University  
Ph.D. University of Western Ontario  
Ernest W. Goodell Research & Creativity Award, 2004  
State University Chancellor’s Award for Excellence in Scholarship & Creative Activities, 2009  

Michael L. Hochberg  
Professor, Biology  
B.A. University of Illinois  
M.S. Northern Illinois University  
Ph.D. University of Illinois  

Michael Medley  
Assistant Professor, Electrical Engineering  
B.S. Rensselaer Polytechnic Institute  
M.S. Rensselaer Polytechnic Institute  
Ph.D. Rensselaer Polytechnic Institute  

Carlie J. Phipps  
Associate Professor, Biology  
B.S. Truman State University  
Ph.D. University of Kansas  

Edmond Rusjan  
Associate Professor, Mathematics  
B.S. University of Ljubljana  
M.S. Virginia Polytechnic Institute  
Ph.D. Virginia Polytechnic Institute  

Narayan Sharma  
Assistant Professor, Organic Chemistry/Biochemistry  
B.S. Tribhuvan University  
M.S. Tribhuvan University  
Ph.D. Miami University  

Mason Somerville  
Professor of Mechanical Engineering Technology  
B.S.M.E. Worcester Poly Tech  
M.S.M.E. Northeastern University  
Ph.D. Pennsylvania State University  

William J. Thistleton  
Associate Professor, Mathematics  
B.S. Clarkson University  
M.A. State University of New York at Potsdam  
Ph.D. State University of New York at Stony Brook  

Zora Thomova  
Professor, Mathematics  
M.S.C. Czech Technical University  
Ph.D. University of Montreal  
State University Chancellor’s Award for Excellence in Teaching, 2007  

Xinchao Wei  
Assistant Professor, Civil Engineering  
B.S. Northeastern University, Shenyang, China  
M.S. Northeastern University, Shenyang, China  
M.S. West Virginia University  
Ph.D. West Virginia University  

Laura Anne Weiser-Erlandson  
Associate Professor, Biology  
B.S. Daemen College  
M.A. State University of New York at Binghamton  
Ph.D. Iowa State University  

F. Andrew Wolfe  
Associate Professor, Civil Engineering Technology  
B.S. Rensselaer Polytechnic Institute  
M.S. Rensselaer Polytechnic Institute  
Ph.D. Rensselaer Polytechnic Institute  

Engineering Technologies  

Mohammed Abdallah  
Assistant Professor, Electrical Engineering Technology  
B.S. University of Mansoura  
M.S. University of Mansoura  
Ph.D. Tennessee Tech University  

S. Jayne Baran  
Associate Professor, Civil Engineering Technology  
B.S. Oklahoma State University  
M.S. University of Washington  
P.E., New York State  

Digendra Das  
Professor, Mechanical Engineering Technology  
B.E. Gauhati University  
M.Tech. Indian Institute of Technology  
Ph.D. University of Manchester Institute of Science & Technology  

Lawrence R. Dunn  
Associate Professor, Civil Engineering Technology  
B.A. Hamilton College  
M.Eng. Rensselaer Polytechnic Institute  
P.E. New York State  

Atlas Hsie  
Associate Professor, Industrial Engineering Technology  
B.S. National Taiwan University  
M.S. University of Akron  
M.S. University of Michigan
Daniel K. Jones  
Associate Professor, Mechanical Engineering Technology  
B.S. Pennsylvania State University  
M.S. Pennsylvania State University  
Ph.D. University of Pittsburgh

Mohamed Rezk  
Associate Professor, Electrical Engineering Technology  
B.S. Alexandria University  
D. Eng. Concordia University  
State University Chancellor’s Award for Excellence in Teaching, 1995

Nursing and Health Professions

Carolyn Christie-McAuliffe  
Assistant Professor, Nursing  
B.S.N. State University of New York Upstate Medical University  
M.S. State University of New York Upstate Medical University  
Ph.D. State University of New York at Binghamton

Louise A. Dean-Kelly  
Associate Professor, Nursing  
B.S. State University of New York at Albany  
M.S. State University of New York at Stony Brook  
D.N.S. State University of New York at Buffalo  
State University Chancellor’s Award for Excellence in Faculty Service, 2011

Darlene Del Prato  
Professor, Nursing  
B.S. Mercy College  
M.S. Syracuse University  
Sc.D. Syracuse University

Patricia Grust  
Instructor, Nursing  
A.A.S. Broome Community College  
B.S. State University of New York Institute of Technology at Utica/Rome  
M.S. University Southern Indiana

Lorraine M. Kane  
Associate Professor, Health Information Management  
B.S. Daemen College  
M.S. State University of New York at Binghamton

Jennifer Klimek-Yingling  
Instructor, Nursing  
A.A.S. Mohawk Valley Community College  
B.S. State University of New York Institute of Technology at Utica/Rome  
M.S.A.N.P State University of New York Institute of Technology at Utica/Rome

Francia Reed  
Instructor, Nursing  
B.S. State University of New York Institute of Technology at Utica/Rome  
M.S. State University of New York Institute of Technology at Utica/Rome

Maria Roche-Dean  
Instructor, Nursing  
A.A.S. Mohawk Valley Community College  
B.S. State University of New York Institute of Technology at Utica/Rome  
M.S. State University of New York Institute of Technology at Utica/Rome

Donna L. Silsbee  
Associate Professor, Health Information Management  
B.S. State University of New York at Albany  
M.S. State University of New York at Binghamton  
Ph.D. State University of New York at Albany  
State University Chancellor’s Award for Excellence in Teaching, 2000  
State University Chancellor’s Award for Excellence in Faculty Service, 2010

Janice L. Welker  
Associate Professor, Health Services Management  
B.S. State University of New York Institute of Technology at Utica/Rome  
M.P.S. New School for Social Research  
Ph.D. Saint Louis University

Social and Behavioral Sciences

David Battin  
Assistant Professor, Psychology  
B.A. State University of New York at Plattsburgh  
M.A. Cornell University  
Ph.D. Cornell University

Joanne M. Joseph  
Associate Professor, Psychology  
B.A. Canisius College  
Ph.D. State University of New York at Albany  
State University Chancellor’s Award for Excellence in Teaching, 1991

Vinod Kool  
Professor, Psychology  
B.A. Agra University  
M.A. Gorakhpur University  
Ph.D. Banaras University  
Ernest W. Goodell Research & Creativity Award, 2007

Kenneth Mazlen  
Associate Professor, Sociology  
B.A. Columbia College  
M.A. University of Michigan  
Ph.D. State University of New York at Albany
Paul H. Schulman  
Associate Professor, Psychology  
B.A. State University of New York at Stony Brook  
M.A. New School for Social Research  
Ph.D. New School for Social Research

Kathryn Stam  
Assistant Professor, Anthropology  
B.A. University of Vermont  
M.S. State University of New York College of Environmental Science and Forestry  
Ph.D. Syracuse University  
State University Chancellor’s Award for Excellence in Teaching, 2010

Veronica J. Tichenor  
Associate Professor, Sociology  
B.A. Kalamazoo College  
M.A. University of Michigan  
Ph.D. University of Michigan  
State University Chancellor’s Award for Excellence in Teaching, 2011

Linda Weber  
Associate Professor, Sociology  
B.S. Syracuse University  
M.S. University of North Texas  
Ph.D. University of North Texas

State University of New York

The nation’s largest and most comprehensive state university system, The State University of New York (SUNY), was founded at Potsdam, New York in 1816. Years later, the Morrill Act of 1862 led to the creation of four Ivy League landgrant SUNY colleges, which now currently exist at Cornell University. SUNY was officially established in February 1948 when New York became the 48th state, of the then 48 states, to create a state university system. SUNY initially represented a consolidation of 29 unaffiliated institutions, including 11 teachers colleges. All of these colleges, with their unique histories and backgrounds, united for a common goal: To serve New York State. Since 1948 SUNY has grown to include 64 individual colleges and universities that were either formerly independent institutions or directly founded by the State University of New York.

Today, the State University of New York’s 64 geographically dispersed campuses bring educational opportunity within commuting distance of virtually all New Yorkers and comprise the nation’s largest comprehensive system of public higher education. The State University of New York’s 64 campuses are divided into four categories, based on educational mission, types of academic opportunities available and degrees offered. SUNY offers students a wide diversity of educational options including short-term vocational/technical courses, certificate, associate, and baccalaureate degree programs, graduate degrees and post-doctoral studies. SUNY provides access to almost every field of academic or professional study within the system via 7,669 degree and certificate programs.

SUNY students represent the society that surrounds them. In January 2008, 19.9% of all enrolled students were minorities. While SUNY students are predominantly New York State residents, representing every one of the state’s 62 counties, they also hail from every other state in the United States, the District of Columbia, four U.S. territories, and 160 nations. SUNY enrolls 40% of all New York State high school graduates, and the total enrollment of 418,000 full-time and part-time students represents 37% of New York State’s higher education student population. SUNY alumni number over 2.4 million graduates residing in New York State and throughout the world.

SUNY attracts the best and brightest scholars, scientists, artists and professionals and boasts nationally and internationally recognized faculty in all major disciplines. Faculty are regular recipients of prestigious awards and honors. SUNY colleges and universities range from world-renowned community colleges, such as the Fashion Institute of Technology, to first-rate graduate schools and the nation’s top veterinary school. The highly-regarded doctoral degree granting universities are home to top research programs and attract experts in a variety of fields. Students study in campus classrooms and laboratories or work from a distance through the SUNY Learning Network, which provides educational opportunities to more than 70,000 students through 4,000 courses and 60 degree and certificate programs.

The State University of New York is committed to providing quality education at an affordable price to New Yorkers and students from across the country and the world.

SUNY’s Mission

The mission of the State University system shall be to provide to the people of New York educational services of the highest quality, with the broadest possible access, fully representative of all segments of the population in a complete range of academic, professional and vocational postsecondary programs including such additional activities in pursuit of these objectives as are necessary or customary. These services and activities shall be offered through a geographically distributed comprehensive system of diverse campuses which shall have differentiated and designated missions designed to provide a comprehensive program of higher education, to meet the needs of both traditional and non-traditional students and to address local, regional and state needs and goals.

In fulfilling this mission, the State University shall exercise care to develop and maintain a balance of its human and physical resources that:

• recognizes the fundamental role of its responsibilities in undergraduate education and provides a full range of graduate and professional education that reflects the opportunity for individual choice and the needs of society;
• establishes tuition which most effectively promotes the university's access goals;
• encourages and facilitates basic and applied research for the purpose of the creation and dissemination of knowledge vital for continued human, scientific, technological and economic advancement;
• strengthens its educational and research programs in the health sciences through the provision of high quality general comprehensive and specialty health care, broadly accessible at reasonable cost, in its hospitals, clinics and related programs and through networks and joint and cooperative relationships with other health care providers and institutions, including those on a regional basis;
• shares the expertise of the state university with the business, agricultural, governmental, labor and nonprofit sectors of the state through a program of public service for the purpose of enhancing the well-being of the people of the state of New York and in protecting our environmental and marine resources;
• encourage, support and participate through facility planning and projects, personnel policies and programs with local governments, school districts, businesses and civic sectors of host communities regarding the health of local economies and quality of life;
• promotes appropriate program articulation between its state-operated institutions and its community colleges as well as encourages regional networks and cooperative relationships with other educational and cultural institutions for the purpose of better fulfilling its mission of education, research and service.

SUNYIT Undergraduate Catalog 2011-2013
Campus Map/Directions

Directions

From the NYS Thruway (I-90): Take Exit 31/Utica. After toll, bear right onto N. Genesee St. and stay in right lane. Turn right at light and immediately turn right onto ramp for West I-790/Rtes. 5/8/12/Rte. 49. Travel 1.5 miles and take the Edic Road exit. Go straight at the light and continue for about a half-mile; turn right at the Edic Road campus entrance.

From NYS Rte. 49: Take the Edic Road exit. Go straight at the light and continue for about a half-mile; turn right at the Edic Road campus entrance.

From Rtes. 5/8/12: Take the I-790/Rte.5/1-90/Rte. 49 exit and stay in the left lane, following the sign for West 49 Rome. Take the Edic Road exit. Go straight at the light and continue for about a half-mile; turn right at the Edic Road campus entrance.

Two other campus entrances (Horatio St. and Mulaney Rd.) can be used from Rtes. 8/12 by taking the Horatio St. exit and following signs for SUNY Institute of Technology.
